Notices and safety information

The following laser notice labels may be affixed to this printer.

Laser notice

This product is certified in the U.S. to conform to the requirements of DHHS 21 CFR Subchapter J for Class I (1) laser products, and elsewhere is certified as a Class I laser product conforming to the requirements of IEC 60825-1.

Class I laser products are not considered to be hazardous. The printer contains internally a Class IIIb (3b) AlGaAs laser producing visible radiation in the wavelength of 770-800 nanometers enclosed in a non-serviceable printhead assembly. The laser system and printer are designed so there is never any human access to laser radiation exceeding Class I levels during normal operation, user maintenance, or prescribed service condition.

Laser-Hinweis

Dieses Produkt ist in den USA zertifiziert und entspricht den Anforderungen der Vorschriften DHHS 21 CFR Unterkapitel J für Laserprodukte der Klasse I (1), andernorts ist er als Laserprodukt der Klasse I zertifiziert, das den Anforderungen von IEC 60825-1 entspricht.

Laserprodukte der Klasse I werden nicht als gefährlich betrachtet. Der Drucker enthält im Inneren einen Laser der Klasse IIIb (3b) AlGaAs, der sichtbare Strahlung im Wellenlängenbereich von 770 bis 800 Nanometern abgibt. Dieser befindet sich in einer Druckkopfeinheit, die nicht gewartet werden kann. Das Lasersystem und der Drucker sind so konstruiert, dass unter normalen Betriebsbedingungen bei der Wartung durch den Benutzer oder bei den vorgeschriebenen Wartungsbedingungen Menschen keiner Laserstrahlung ausgesetzt sind, die die Werte für Klasse I überschreitet.

Avis relatif à l'utilisation de laser

Ce produit est certifié conforme aux exigences de la réglementation des Etats-Unis relative aux produits laser (DHHS 21 CFR Sous-chapitre J pour Classe I (1)). Pour les autres pays, il est certifié conforme aux exigences des normes CEI 60825-1 relatives aux produits laser de classe I.

Les produits laser de Classe I ne sont pas considérés comme dangereux. L'imprimante contient un laser de Classe IIIb (3b) AlGaAs qui produit des radiations visibles opérant sur une longueur d'onde de l'ordre de 770 à 800 nanomètres au sein d'un boîtier non démontable de la tête d'impression. Le système laser et l'imprimante ont été conçus de manière à ce que personne ne soit jamais exposé à des radiations laser dépassant le niveau de classe I dans le cadre d'un fonctionnement normal, de l'entretien par l'utilisateur ou de la maintenance.

Avvertenze sui prodotti laser

Questo prodotto è certificato negli Stati Uniti come prodotto conforme ai requisiti DHHS 21 CFR Sottocapitolo J per i prodotti laser di Classe I (1), mentre in altri paesi è certificato come prodotto laser di Classe I conforme ai requisiti IEC 60825-1.

I prodotti laser di Classe I non sono considerati pericolosi. La stampante contiene un laser Classe IIIb (3b) AlGaInP che emette una radiazione visibile a una lunghezza d'onda di 770-800 nanometri all'interno dell'unità testina di stampa non sottoponibile a manutenzione. Il sistema laser e la stampante sono stati progettati in modo da impedire l'esposizione a radiazioni laser superiori al livello previsto dalla Classe I durante le normali operazioni di stampa, manutenzione o assistenza.

Avisos sobre el láser

Este producto se ha certificado en EE.UU. cumpliendo con los requisitos de DHHS 21 CFR subcapítulo J para los productos láser de Clase I (1) y en otros países está certificada como un producto láser de Clase I de acuerdo con los requisitos de IEC 60825-1.

Los productos láser de Clase I no se consideran peligrosos. Este producto contiene un láser interno de Clase IIIb (3b) AlGaAs que produce una radiación visible en una longitud de onda de 770-800 nanómetros cerrado en un conjunto de cabezal de impresión que no se puede reparar. El sistema láser y la impresora se han diseñado para que el ser humano no acceda nunca a las radiaciones láser por encima del nivel de Clase I durante el funcionamiento normal, mantenimiento del usuario o condición de servicio prescrita.

Declaração sobre Laser

Este produto foi certificado nos EUA por estar em conformidade com os requisitos do DHHS 21 CFR, subcapítulo J, para produtos a laser de Classe I (1) e, nos demais países, foi certificado como um produto a laser de Classe I em conformidade com os requisitos da IEC 60825-1.

Os produtos a laser de Classe I não são considerados prejudiciais. A impressora contém, internamente, um laser de Classe IIIb (3b) AlGaAs que produz radiação visível no comprimento de onda de 770-800 nanômetros incluso em um conjunto do cabeçote de impressão cuja manutenção não é facilitada. O sistema do laser e a impressora foram projetados para que jamais haja acesso humano à radiação do laser acima dos níveis da Classe I durante a operação normal ou a manutenção pelo usuário ou sob as condições de manutenção prescritas.

Aviso sobre o laser

Nos E.U.A., este produto está classificado como estando em conformidade com os requisitos DHHS 21 CFR, Subcapítulo J, para produtos laser de Classe I (1) e, nas restantes regiões, está classificado como um produto de Classe I, estando em conformidade com os requisitos IEC 60825-1.

Os produtos laser de Classe I não são considerados perigosos. A impressora possui, no seu interior, um laser de Classe IIIb (3b) AlGaAs que produz radiação num comprimento de onda de 770-800 nanômetros. Este encontra-se fechado no conjunto da cabeça de impressão, que não é passível de manutenção. O sistema de laser e a impressora estão concebidos de forma a que nunca haja acesso humano à radiação laser que excede os níveis correspondentes à Classe I durante o funcionamento normal, manutenção ou em condições de assistência recomendada.

Laserinformatie

Dit product is in de Verenigde Staten gecertificeerd als een product dat voldoet aan de vereisten van DHHS 21 CFR paragraaf J voor laserproducten van klasse I (1). Elders is het product gecertificeerd als een laserproduct van klasse I dat voldoet aan de vereisten van IEC 60825-1.

Laserproducten van klasse I worden geacht geen gevaar op te leveren. De printer bevat intern een laser van klasse IIIb (3b) AlGaAs die zichtbare straling produceert in een golflengtebereik van 770-800 nanometer in een niet-buikbare printkopenheid. Het lasersysteem en de printer zijn zodanig ontworpen dat gebruikers nooit blootstaan aan laserstraling die hoger is dan het toegestane niveau voor klasse I-apparaten, tijdens normaal gebruik, onderhoudswerkzaamheden door de gebruiker of voorgeschreven servicewerkzaamheden.

Lasermeddelelse

Dette produkt er certificeret i USA i henhold til kravene i DHHS 21 CFRi underafsnit J for klasse I (1)-laserprodukter og er andre steder certificeret som et klasse I laserprodukt i henhold til kravene i IEC 60825-1.

Klasse I-laserprodukter er ikke anset som farlige. Printerens indeholder internt en klasse IIIb (3b) AlGaAs-laser, der producerer synlig stråling med en bølgelængde på 770-800 nanometer, indkapslet i en ikke-servicerbar printhovedsamling. Lasersystemet og printerens er udviklet på en sådan måde, at der ikke er en direkte laserstråling, der overskrider Klasse I-niveauet under normal brug, brugers vedligeholdelse eller de foreskrevne servicebetingelser.

Laserilmoitus

Tämä tuote on sertifioitu Yhdysvalloissa DHHS 21 CFR Subchapter J -standardin mukaiseksi luokan I (1) -lasertuotteeksi ja muualla IEC 60825-1 -standardin mukaiseksi luokan I lasertuotteeksi.

Luokan I lasertuotteita ei pidetä haitallisina. Laitteen tulostuspääkokoospanossa (ei huollettavissa) on sisäänrakennettu luokan IIIb (3b) AlGaAs -laser, joka tuottaa silmännähtävää säteilyä 770-800 nanometrillä aallonpituudella. Laserjärjestelmä ja tulostin ovat rakenteeltaan sellaisia, että käyttäjä ei joudu alttiiksi luokkaa 1 suuremmalle säteilylle normaalin käytön, ylläpidon tai huollon aikana.

Huomautus laserlaitteesta

Tämä tuote on sertifioitu Yhdysvalloissa DHHS 21 CFR Subchapter J -standardin mukaiseksi luokan I (1) -lasertuotteeksi ja muualla IEC 60825-1 -standardin mukaiseksi luokan I lasertuotteeksi.

Luokan I lasertuotteita ei pidetä haitallisina. Laitteen tulostuspääkokoospanossa (ei huollettavissa) on sisäänrakennettu luokan IIIb (3b) AlGaAs -laser, joka tuottaa silmännähtävää säteilyä 770-800 nanometrillä aallonpituudella. Laserjärjestelmä ja tulostin ovat rakenteeltaan sellaisia, että käyttäjä ei joudu alttiiksi luokkaa 1 suuremmalle säteilylle normaalin käytön, ylläpidon tai huollon aikana.

Laser-notis

Denna produkt är certifierad i USA i enlighet med kraven i DHHS 21 CFR underkapitel J för klass I (1)-laserprodukter, och på andra platser certifierad som en klass I-laserprodukt i enlighet med kraven i IEC 60825-1.

Klass I-laserprodukter betraktas inte som skadliga. Skrivaren innehåller en klass IIIb (3b) AlGaAs-laser som producerar synlig strålning inom våglängden 770-800 nm, innesluten i en icke-servicebar skrivhuvudenhet. Lasersystemet och skrivaren är utformade så att människor aldrig utsätts för laserstrålning som överskrider klass I-nivåerna under normala förhållanden vid användning, underhåll eller service.

Laser-melding

Dette produktet er sertifisert i USA for samsvar med kravene i DHHS 21 CFR, underkapittel J for laserprodukter av klasse I (1) og er andre steder sertifisert som et laserprodukt av klasse I som samsvarer med kravene i IEC 60825-1.

Laserprodukter av klasse I anses ikke som helseskadelige. Skriveren inneholder en intern AlGaAs-laser av klasse IIIb (3b) som produserer synlig stråling i bølgelender på 770-800 nanometer i en ikke-reparerbar skrivhodeenhet. Lasersystemet og skriveren er utformet slik at mennesker ikke utsettes for laserstråling utover nivåene i klasse I under normal drift, vedlikehold eller foreskrevet service.

Avís sobre el Láser

Este producto está certificado en Estados Unidos para el cumplimiento de los requisitos estipulados en DHHS 21 CFR Subcapítulo J para productos láser de Clase I (1), y cuenta con certificación para otros países como producto láser de Clase I de conformidad con los requisitos de IEC 60825-1.

Los productos láser de Clase I no se consideran peligrosos. La impresora contiene en su interior radiación láser visible AlGaAs Clase IIIb (3b) en la longitud de onda de 770 - 800 nanómetros dentro de un mecanismo de cabezal de impresión que no requiere servicio técnico. La impresora y el sistema láser están diseñados de forma tal que no exista nunca acceso humano a radiación láser que supere los niveles de Clase I durante el funcionamiento normal, las tareas de mantenimiento por parte del usuario o las condiciones de servicio técnico estipuladas.

レーザー通知

本製品は、米国においてクラス I (1) レーザー製品に対する DHHS 21 CFR Subchapter J の要件に準拠し、その他の国では IEC 60825-1 の要件に準拠するクラス I

レーザー製品として認可されています。

クラス I レーザー製品は、危険性がないとみなされています。プリンタ内部には、波長が 770~800 ナノメートルの可視放射を発するクラス IIIb (3b) AlGaAs

レーザー装置が搭載されており、整備不可のプリンタヘッドアセンブリに収容されています。レーザーシステムとプリンタは、通常の操作、ユーザによるメンテナンス、または所定のサービス条件の下で、ユーザがクラス I

レベルを超えるレーザー放射に絶対にさらされないように設計されています。

激光通知

本打印机在美国认证合乎 DHHS 21 CFR Subchapter J 对分类

I (1) 激光产品的标准，而在其他地区则被认证是合乎 IEC 60825-1 的分类 I 激光产品。

一般认为分类 I 激光产品不具有危险性。本打印机内部含有分类 IIIb (3b) AlGaAs

的激光，封装在不可维修的打印头配件中，会产生波长范围在 770-800nm

之间的可见放射线。本激光系统及打印机的设计，在一般操作、使用者维护或规定内的维修情况下，不会使人体接触分类 I 以上等级的辐射。

激光通知

本產品係經過美國核可，符合 DHHS 21 CFR 二級規章之 I 級 I (1) 規定及 IEC 60825-1 規定的 I

級雷射產品。根據 I 級雷射產品的規定，這類產品不會對人體造成傷害。本印表機內部所採用之

IIIb (3b) 級 AlGaAs 雷射所產生的可見放射線含括在其作用波長為 770-800 奈米 (nanometer)

的不可修復列印頭組件中。使用者只要以正確的方法操作及維護保養，並依照先前述之維修方式進行修復，此印表機與其雷射系統絕不會產生 I 級以上的放射線，而對人體造成傷害。

레이저 통지

본 제품은 미국에서 레이저 제품용 DHHS 21 CFR Subchapter J의 요구 사항을 준수하며 이외

지역에서 IEC 60825-1의 요구 사항을 준수하는 클래스 I(1) 레이저 제품으로 승인되었습니다.

클래스 I 레이저 제품은 위험한 제품으로 간주되지 않습니다. 프린터에는 770-800 나노미터의 파장

영역에서 가시 방사를 방출하며 서비스 불가능한 프린터 헤드 부품에 밀봉된 레이저인 클래스

IIIb(3b) AlGaAs 레이저가 내부에 포함되어 있습니다. 레이저 시스템과 프린터는 정상적인 작동,

사용자 유지 관리 또는 사전 설명된 서비스 조건에는 사람에게서 클래스 I 수준 이상의 레이저 방사가

노출되지 않도록 설계되었습니다.

Safety information

- The safety of this product is based on testing and approvals of the original design and specific components. The manufacturer is not responsible for safety in the event of use of unauthorized replacement parts.
- The maintenance information for this product has been prepared for use by a professional service person and is not intended to be used by others.
- There may be an increased risk of electric shock and personal injury during disassembly and servicing of this product. Professional service personnel should understand this and take necessary precautions.
-  **CAUTION:** When you see this symbol, there is a danger from hazardous voltage in the area of the product where you are working. Unplug the product before you begin, or use caution if the product must receive power in order to perform the task.

Consignes de sécurité

- La sécurité de ce produit repose sur des tests et des agréments portant sur sa conception d'origine et sur des composants particuliers. Le fabricant n'assume aucune responsabilité concernant la sécurité en cas d'utilisation de pièces de rechange non agréées.
- Les consignes d'entretien et de réparation de ce produit s'adressent uniquement à un personnel de maintenance qualifié.
- Le démontage et l'entretien de ce produit pouvant présenter certains risques électriques, le personnel d'entretien qualifié devra prendre toutes les précautions nécessaires.
-  **ATTENTION :** Ce symbole indique la présence d'une tension dangereuse dans la partie du produit sur laquelle vous travaillez. Débranchez le produit avant de commencer ou faites preuve de vigilance si l'exécution de la tâche exige que le produit reste sous tension.

Norme di sicurezza

- La sicurezza del prodotto si basa sui test e sull'approvazione del progetto originale e dei componenti specifici. Il produttore non è responsabile per la sicurezza in caso di sostituzione non autorizzata delle parti.
- Le informazioni riguardanti la manutenzione di questo prodotto sono indirizzate soltanto al personale di assistenza autorizzato.
- Durante lo smontaggio e la manutenzione di questo prodotto, il rischio di subire scosse elettriche e danni alla persona è più elevato. Il personale di assistenza autorizzato deve, quindi, adottare le precauzioni necessarie.
-  **ATTENZIONE:** Questo simbolo indica la presenza di tensione pericolosa nell'area del prodotto. Scollegare il prodotto prima di iniziare o usare cautela se il prodotto deve essere alimentato per eseguire l'intervento.

Sicherheitshinweise

- Die Sicherheit dieses Produkts basiert auf Tests und Zulassungen des ursprünglichen Modells und bestimmter Bauteile. Bei Verwendung nicht genehmigter Ersatzteile wird vom Hersteller keine Verantwortung oder Haftung für die Sicherheit übernommen.
- Die Wartungsinformationen für dieses Produkt sind ausschließlich für die Verwendung durch einen Wartungsfachmann bestimmt.
- Während des Auseinandernehmens und der Wartung des Geräts besteht ein zusätzliches Risiko eines elektrischen Schlags und körperlicher Verletzung. Das zuständige Fachpersonal sollte entsprechende Vorsichtsmaßnahmen treffen.
-  **ACHTUNG:** Dieses Symbol weist auf eine gefährliche elektrische Spannung hin, die in diesem Bereich des Produkts auftreten kann. Ziehen Sie vor den Arbeiten am Gerät den Netzstecker des Geräts, bzw. arbeiten Sie mit großer Vorsicht, wenn das Produkt für die Ausführung der Arbeiten an den Strom angeschlossen sein muß.

Pautas de Seguridad

- La seguridad de este producto se basa en pruebas y aprobaciones del diseño original y componentes específicos. El fabricante no es responsable de la seguridad en caso de uso de piezas de repuesto no autorizadas.
- La información sobre el mantenimiento de este producto está dirigida exclusivamente al personal cualificado de mantenimiento.
- Existe mayor riesgo de descarga eléctrica y de daños personales durante el desmontaje y la reparación de la máquina. El personal cualificado debe ser consciente de este peligro y tomar las precauciones necesarias.
-  **PRECAUCIÓN:** este símbolo indica que el voltaje de la parte del equipo con la que está trabajando es peligroso. Antes de empezar, desenchufe el equipo o tenga cuidado si, para trabajar con él, debe conectarlo.

Informações de Segurança

- A segurança deste produto baseia-se em testes e aprovações do modelo original e de componentes específicos. O fabricante não é responsável pela segurança, no caso de uso de peças de substituição não autorizadas.
- As informações de segurança relativas a este produto destinam-se a profissionais destes serviços e não devem ser utilizadas por outras pessoas.
- Risco de choques eléctricos e ferimentos graves durante a desmontagem e manutenção deste produto. Os profissionais destes serviços devem estar avisados deste facto e tomar os cuidados necessários.
-  **CUIDADO:** Quando vir este símbolo, existe a possível presença de uma potencial tensão perigosa na zona do produto em que está a trabalhar. Antes de começar, desligue o produto da tomada eléctrica ou seja cuidadoso caso o produto tenha de estar ligado à corrente eléctrica para realizar a tarefa necessária.

Informació de Seguretat

- La seguretat d'aquest producte es basa en l'avaluació i aprovació del disseny original i els components específics.
El fabricant no es fa responsable de les qüestions de seguretat si s'utilitzen peces de recanvi no autoritzades.
- La informació pel manteniment d'aquest producte està orientada exclusivament a professionals i no està destinada a ningú que no ho sigui.
- El risc de xoc elèctric i de danys personals pot augmentar durant el procés de desmuntatge i de servei d'aquest producte. El personal professional ha d'estar-ne assabentat i prendre les mesures convenients.
-  **PRECAUCIÓ:** aquest símbol indica que el voltatge de la part de l'equip amb la qual esteu treballant és perillós. Abans de començar, desendolieu l'equip o extremeu les precaucions si, per treballar amb l'equip, l'heu de connectar.

안전 사항

- 본 제품은 원래 설계 및 특정 구성품에 대한 테스트 결과로 안정성이 입증된 것입니다. 따라서 무허가 교체부품을 사용하는 경우에는 제조업체에서 안전에 대한 책임을 지지 않습니다.
- 본 제품에 관한 유지 보수 설명서는 전문 서비스 기술자용으로 작성된 것이므로, 비전문가는 사용할 수 없습니다.
- 본 제품을 해체하거나 정비할 경우, 전기적인 충격을 받거나 상처를 입을 위험이 커집니다. 전문 서비스 기술자는 이 사실을 숙지하고, 필요한 예방 조치를 취하도록 하십시오.
-  **주의:** 이 표시는 해당영역에서 고압전류가 흐른다는 위험 표시입니다. 시작전에 플러그를 뽑으시거나, 주의를 기울여 주시기 바랍니다.

安全信息

- 本产品的安全性以原来设计和特定产品的测试结果和认证为基础。万一使用未经许可的替换部件，制造商不对安全性负责。
- 本产品的维护信息仅供专业服务人员使用，并不打算让其他人使用。
- 本产品在拆卸、维修时，遭受电击或人员受伤的危险性会增高，专业服务人员对这点必须有所了解，并采取必要的预防措施。
-  **切记:** 当您看到此符号时，说明在您工作的产品区域有危险电压的存在。请在开始操作前拔掉产品的电源线，或者在产品必须使用电源来执行任务时，小心从事。

Preface

This manual contains maintenance procedures for service personnel. It is divided into the following chapters:

1. **General information** contains a general description of the printer and the maintenance approach used to repair it. Special tools and test equipment, as well as general environmental and safety instructions, are discussed.
 2. **Diagnostic information** contains an error indicator table, symptom tables, and service checks used to isolate failing field replaceable units (FRUs).
 3. **Diagnostic aids** contains tests and checks used to locate or repeat symptoms of printer problems.
 4. **Repair information** provides instructions for making printer adjustments and removing and installing FRUs.
 5. **Connector locations** uses illustrations to identify the connector locations and test points on the printer.
 6. **Preventive maintenance** contains the lubrication specifications and recommendations to prevent problems.
 7. **Parts catalog** contains illustrations and part numbers for individual FRUs.
- Appendix A** contains service tips and information.
Appendix B contains representative print samples.

Change history

Revision date	Updates
2013/08/02	Added the topic “Steps before starting the 9yy service checks” on page 2-94.
2013/7/22	Updated groupings to items 1 and 3 in the illustration in Assembly 4 of the parts catalog.
2012/12/5	Added 906.05-906.08 error codes in the “147.xx, 906.05-906.08, 920.01—POST (power-on self test) aligner error service check” on page 2-57.
2012/7/2	Updated step numbers in “945.xx, 947.xx—Transfer roll error service check” on page 2-119.
2012/6/8	Added “Print quality—white gapping” on page 2-138.
2012/5/30	<ul style="list-style-type: none"> • Changed PN 40X8307 to 40X6401 in the Parts Catalog chapter. • Added “Cartridge guide wheel removal” on page 4-67.

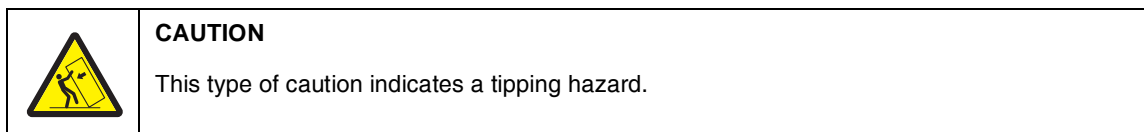

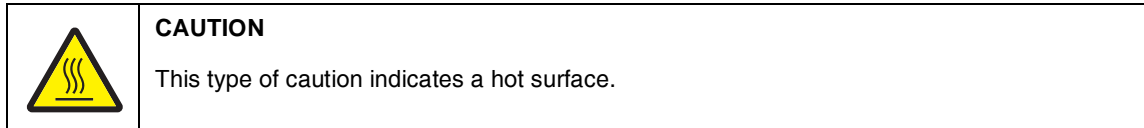

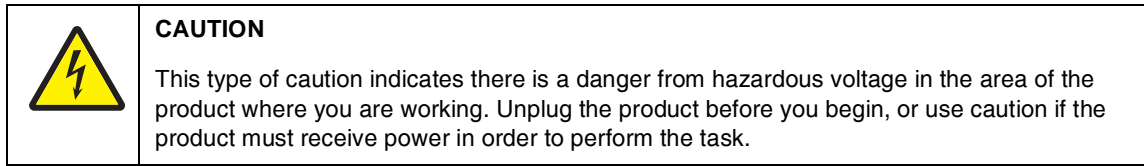

Conventions

Note: A note provides additional information.

Warning: A warning identifies something that might damage the product hardware or software.

There are several types of caution statements:

	<p>CAUTION</p> <p>A caution identifies something that might cause a service harm.</p>

1. General information

The Lexmark™ C746x and C748x family of color laser printers.

Previous

Next

Go Back

Models

Printer name	Machine type and model	Description
Lexmark C746n	5026-310	Network-ready
Lexmark C746dn	5026-330	Network-ready with duplex
Lexmark C746dtn	5026-330	Network-ready with duplex and 550 sheet tray
Lexmark C748e	5026-510	Network-ready with etask touch screen
Lexmark C748de	5026-530	Network-ready with etask touch screen and duplex
Lexmark C748dte	5026-530	Network-ready with etask touch screen, duplex, and 550 sheet tray

Options

Number	Description
1	Standard output bin
2	Paper support
3	Printer operator panel
4	Standard 550-sheet tray (Tray 1)
5	Multipurpose feeder
6	Optional 550-sheet specialty media drawer
7	Optional 550-sheet tray
8	Optional 2,000-sheet high.capacity feeder

Note: Some configurations may require a caster base for stability.

Media options

The C746x and C748x printers support the 550-sheet drawer, special media drawers, and 2000-sheet high-capacity input tray. The C746x and C748x printers support up to four input options. The options can include any combination of 550 sheet drawers and 550 sheet Specialty Media Drawers, with a maximum of one 2000 sheet drawer (always at the lowest position.) A caster base is required with some configurations. Including the base machine capacity of 650 sheets, the C746x and C748x supports up to 4300 sheets.

The Lexmark C74x options are compatible with the Lexmark C73x SFP, X73x MFP, and X74x MFP, but not with any other Lexmark printers. No other options are supported by the C74x.

The media options include:

- **550-Sheet Drawer**—This optional input source installs beneath the printer, and it holds approximately 550 sheets of (20 lb.) paper.
- **High Capacity Input Tray**—This optional input source installs beneath the printer, and it holds approximately 2000 sheets of (20 lb.) paper.
- **Specialty Media Drawer**—This optional input source installs beneath the printer, and it holds approximately 550 sheets of (20 lb.) paper, or 85 standard envelopes.

Memory options

- **Additional memory card**—The memory options for the C746x and C748x printers are 200 pin DDR2, SODIMM, and they are available at 256MB, 512MB, and 1GB sizes.
- **Flash memory card**—Flash Memory cards are available in 256MB.
- **Hard disk**—If larger storage is required, an optional hard disk is available.

Printer specifications

Dimensions

The following table contains the dimensions and weight for each of the respective printer models. This does not include packaging.

	Height	Width	Depth	Weight
Basic printer (C746n/dn)	454.7 mm (17.9 in)	435.0 mm (17.1 in)	400.0 mm (15.7 in)	25.2 kg (55.6 lbs)
Basic printer (C748e/de)	454.7 mm (17.9 in)	435.0 mm (17.1 in)	400.0 mm (15.7 in)	25.6 kg (56.4 lbs)
C746dtn printer, with 550-sheet optional drawer	581.7 mm (22.9 in)	435.0 mm (17.1 in)	545.0 mm (21.5 in)	29.7 kg (65.5 lbs)
C748dte printer, with 550-sheet optional drawer	581.7mm (22.9 in)	435.0 mm (17.1 in)	545.0 mm (21.5 in)	30.1kg (66.4 lbs)
550-sheet drawer	169.0 mm (6.6 in)	435.0 mm (17.1 in)	545.0 mm (21.5 in)	4.5 kg (10.0 lbs)
550-sheet special media drawer	169.0 mm (6.6 in)	435.0 mm (17.1 in)	545.0 mm (21.5 in)	4.5 kg (10.0 lbs)
2000-sheet high capacity feeder	387.0 mm (15.2 in)	435.0 mm (17.1 in)	545.0 mm (21.5 in)	26.1 kg (57.5 lbs)
Spacer	169.0 mm (6.6 in)	435 mm (17.1 in)	545 mm (21.5 in)	3.2 kg (7.0 lbs)
Caster Base	127.0 mm (5.0 in)	778 mm (30.6 in)	812.0 mm (32.0 in)	43.1 kg (95.0 lbs)

Clearances

Number	Description	Clearance
1	Right side	101.6 mm (4 in.)
2	Front	609.6 mm (24 in.)
3	Left side	152.4 mm (6 in.)
4	Rear	152.4 mm (6 in.)
5	Top	304.8 mm (12 in.)

Memory

	C746	C748
Standard memory —The standard RAM is soldered onto the system board.		
Memory size	512MB	512MB
Optional memory —Optional DIMM (Dual Inline Memory Module) is a card that can be plugged into an available memory slot on the system board. Flash memory is a card that can also be plugged into an available slot.		
Maximum number of memory (DIMM) slots	1	1
Maximum number of flash memory slots	1	1
DIMM memory sizes available	256MB, 512MB, 1024MB	256MB, 512MB, 1024MB
Flash (Nand Flash)	256	256
Maximum possible memory	1536MB	1536MB

Resolution

The following resolutions are available:

- 4800CQ (default resolution)
- 1200 x 1200 dpi (at reduced printer speed)

Data streams

- XPS
- PCL 6 emulation (includes PCL 5e and PCL XL interpreters)
- PostScript 3 emulation
- PDF 1.6
- PPDS
- PictBridge
- HTML (including DBCS)
- Direct Image (TIFF, TIF, JPEG, JPG, GIF, PNG, BMP, PCX, and DCX)

Environment specifications

Environment	Specifications
Operating	
Air temperature—Operating	15.6° to 32.2° C (60° to 90° F)
Air temperature—Power off	10° to 40° C (50° to 104° F)
Air Relative Humidity	Relative humidity 8% to 80%
Wet Bulb Temperature—Operating	22.8° C (73.0° F) Maximum
Web Bulb Temperature—Power off	26.7° C (80.1° F) Maximum
Altitude	0–3,048 meters (10,000 ft.)
Ambient Operating Environment*	15.6° to 32.2° C (60° to 90° F) and 8% to 80% RH
Shipping and storage	
Cartridges (packaged)	-40° C to 40° C (104° Fahrenheit)
Printer with Cartridges (packaged)	-40° C to 40° C (104° Fahrenheit)
Printer without Cartridges	-40° C to 40° C (104° Fahrenheit)
Air Relative Humidity	Relative humidity 8% to 80%
Altitude	0–10,300 meters (34,000 feet)

Environment	Specifications
Web Bulb Temperature—Power Off	26.7° C (80.1° F) Maximum
* In some cases performance specifications, such as paper OCF and EP cartridge usage, are specified to be measured at an ambient condition.

Electrical and power specifications

The following table specifies nominal average power requirements for the basic printer configurations. All power levels are shown in Watts (W). Maximum current is given in Amperes (A).

Printing states	C746n/dn/dtn	Lexmark C748e/de/dte
Off	0W	0W
Sleep mode	6.8W	7.3W
Hibernate mode	0.55W	0.55W
Ready Mode	48W	48W
Simplex Printing	535W	535W
Duplex Printing	420W	420W
Typical Electricity Consumption Test	3.561 kwh / wk	3.687 kwh / wk
Typical Electricity Consumption Test (Eco-Mode)	2.375 kwh / wk	2.491 kwh / wk
Average current while printing (110 Volts)	8.3 A	8.3 A
Average current while printing (120 Volts)	7.5 A	7.5 A
Average current while printing (230 Volts)	3.8 A	3.8 A

Low-voltage models

- 110 to 127 V at 50 to 60 Hertz (Hz) nominal
- 99 to 139.7 V, extreme
- 100 V at 50 to 60 Hertz (Hz) nominal
- 90 to 121 V, extreme

High-voltage models

- 220 to 240 V at 50 to 60 Hz (not available in all countries)
- 198 to 259 V, extreme

Notes:

- Using a power converter or inverter with the Lexmark C740 Series printers is not recommended.
- The C740 series duplex models (C746dn, C746dtn, C748de, C748dte) are Energy Star Qualified.
- All models ship with Sleep Mode = On.
- The default time out to Sleep mode is 30 minutes.

Acoustic specifications

All acoustic measurements are made in accordance with ISO 7779:1999—*Acoustics: Measurement of airborne noise emitted by information technology and telecommunications* and reported in conformance with ISO 9296: 1988-04-15—*Acoustics Declared noise emission values of computer and business equipment*.

Operating mode	1 meter average sound pressure (dBA)	Declared sound power level (Bels)
C746		
Idle	32 dB	4.8 Bels
Simplex printing (mono)	53 dB	6.8 Bels
Simplex printing (color)	54 dB	6.8 Bels
Duplex printing (mono)	54 dB	6.9 Bels
Duplex printing (color)	55 dB	6.9 Bels
Quiet mode printing (mono)	48 dB	6.3 Bels
Quiet mode printing (color)	48 dB	6.3 Bels
C748		
Idle	32 dB	4.8 Bels
Simplex printing (mono)	54 dB	6.8 Bels
Simplex printing (color)	55 dB	6.9 Bels
Duplex printing (mono)	53 dB	6.9 Bels
Duplex printing (color)	55 dB	6.9 Bels
Quiet mode printing (mono)	47 dB	6.3 Bels
Quiet mode printing (color)	48 dB	6.3 Bels

Media specifications

Paper designed for use with xerographic copiers should provide satisfactory print quality and feed reliability. Other types of media may be suitable. It is recommended that users test any particular brand for suitability to their applications. Refer to the printer *User's Guide* for additional media specifications.

Paper

Follow the media guidelines below for successful printing:

- Rough, highly textured, limp, or pre-curved papers will result in lower print quality and more frequent paper feed failures.
- Colored papers must be able to withstand 190° C (374° F) fusing temperature.
- Preprinted forms and letterheads must be able to withstand 190° C (374° F) fusing temperature and should be selected using guidelines found in the printer *User's Guide*. The chemical process used in preprinting may render some papers unsuitable for use.
- Unsuitable papers include:
 - Multi-part forms and documents
 - Chemically treated papers; coated
 - Synthetic and thermal papers
 - A5 paper less than 80 g/m² (21 lb)
 - Recycled paper less than 75 g/m² (20 lb)
 - Preprinted papers requiring a high degree of registration.
 - Recycled paper less than 80 g/m² (21 lb) may cause unacceptable results.

Envelopes

- All envelopes should be new, unused, and without package damage.
- Envelopes with excessive curl or twist exceeding 6 mm, those stuck together, those with bent corners or nicked edges, or those that interlock should not be used.
- Minimum weight: 60 g/m² (16 lb.)
- The following envelopes should not be used:
 - Envelopes with windows, holes, perforations, cutouts, or deep embossing
 - Envelopes with metal clasps, string ties, or metal folding bars
 - Envelopes with exposed flap adhesive when the flap is in the closed position.
- For best results, printing on new 90 g/m² (24 lb.) sulfite or 25% cotton bond envelopes is recommended.
- Under high humidity conditions (over 60%), envelopes may seal during printing.

Transparencies

- Use letter or A4-size transparencies for color laser printers only.
- See Ordering Information for the recommended transparencies for the Lexmark C746x/C748x laser printers.
- Do not use inkjet transparencies.

Labels

Labels should be selected using guidelines found in the *User's Guide* or the *Card Stock and Label Guide*, and tested for acceptability.

Using recycled paper and other office papers

Recycled office paper produced specifically for use in laser (electrophotographic) printers may be used in your printer. However, no blanket statement can be made that all recycled paper will feed well.

Generally, the following property guidelines apply to recycled paper.

- Low moisture content (4–5%)
- Suitable smoothness (100–200 Sheffield units, or 140–350 Bendtsen units, European)
Note: Some much smoother papers (such as premium 24 lb laser papers, 50–90 Sheffield units) and much rougher papers (such as premium cotton papers, 200–300 Sheffield units) have been engineered to work very well in laser printers, despite surface texture. Before using these types of paper, consult your paper supplier.
- Suitable sheet-to-sheet coefficient of friction (0.4–0.6)
- Sufficient bending resistance in the direction of feed

Recycled paper, paper of lower weight (<60 g/m² [16 lb bond]) and/or lower caliper (<3.8 mils [0.1 mm]), and paper that is cut grain-short for portrait (or short-edge) fed printers may have lower bending resistance than is required for reliable paper feeding. Before using these types of paper for laser (electrophotographic) printing, consult your paper supplier. Remember that these are general guidelines only and that paper meeting these guidelines may still cause paper feeding problems in any laser printer (for example, if the paper curls excessively under normal printing conditions).

Input and output capacities

The following table describes the media options that each model supports, and the estimated capacities in stand and maximum configurations. Capacity may vary and is subject to media specifications and printer operating environment. The capacities are based on plain paper at 75g/m².

Standard input sources	
Primary tray capacity (sheets)	550
Multipurpose feeder capacity (sheets)	100
Number of standard sources (primary tray and multipurpose feeder)	2
Total standard capacity (sheets)	650
Optional input sources	
550-Sheet Drawer (sheets)	550
High-capacity input tray (HCIT) (sheets)	2,000
Specialty Media Drawer ^a (sheets)	550 (or 85 envelopes)
Maximum number of 550-sheet drawers (including Speciality Media Drawer)	4
Maximum number of high-capacity input tray (must be installed on the bottom)	1
Maximum number of standard and optional input sources	6
Maximum capacity for standard and options input sources (sheets)	4,300
Standard output bin capacity (sheets)^b	300
Maximum output bin capacity (sheets)	300
Duplex capability	Standard for C746dn, C746dtn, C748de, and C748dte models
^a Each 550-sheet Specialty Media Drawer replaces one 550-sheet option.	
^b The output bin capacity may be reduced by 50 sheets when the duplex feature is in use.

Paper guidelines

Paper characteristics

The following paper characteristics affect print quality and reliability. Consider these characteristics when evaluating new paper stock.

Weight—The printer can automatically feed paper weights from 60 to 162/17 g/m² (16 to 43 lb bond) grain long. Paper lighter than 60 g/m² (16 lb) might not be stiff enough to feed properly, causing jams. For best performance, use 75 g/m² (20 lb bond) grain long paper. For paper smaller than 182 x 257 mm (7.2 x 10.1 in.), we recommend 90 g/m² (24 lb) or heavier paper.

Note: Duplex is supported only for 63 g/m²–170 g/m² (17 lb–45 lb bond) paper.

Curl—Curl is the tendency for paper to curl at its edges. Excessive curl can cause paper feeding problems. Curl can occur after the paper passes through the printer, where it is exposed to high temperatures. Storing paper unwrapped in hot, humid, cold, or dry conditions, even in the trays, can contribute to paper curling prior to printing and can cause feeding problems.

Smoothness—Paper smoothness directly affects print quality. If paper is too rough, toner cannot fuse to it properly. If paper is too smooth, it can cause paper feeding or print quality issues. Always use paper between 100 and 300 Sheffield points; however, smoothness between 150 and 200 Sheffield points produces the best print quality.

Moisture content—The amount of moisture in paper affects both print quality and the ability of the printer to feed the paper correctly. Leave paper in its original wrapper until it is time to use it. This limits the exposure of paper to moisture changes that can degrade its performance.

Condition paper before printing by storing it in its original wrapper in the same environment as the printer for 24 to 48 hours before printing. Extend the time several days if the storage or transportation environment is very different from the printer environment. Thick paper may also require a longer conditioning period.

Grain direction—Grain refers to the alignment of the paper fibers in a sheet of paper. Grain is either grain long, running the length of the paper, or grain short, running the width of the paper. For 60 to 135 g/m² (16 to 36 lb bond) paper, grain long paper is recommended. For papers heavier than 135 g/m², grain short is recommended.

Fiber content—Most high-quality xerographic paper is made from 100% chemically treated pulped wood. This content provides the paper with a high degree of stability resulting in fewer paper feeding problems and better print quality. Paper containing fibers such as cotton can negatively affect paper handling.

Unacceptable paper

The following paper types are not recommended for use with the printer:

- Chemically treated papers used to make copies without carbon paper, also known as carbonless papers, carbonless copy paper (CCP), or no carbon required (NCR) paper
- Preprinted papers with chemicals that may contaminate the printer
- Preprinted papers that can be affected by the temperature in the printer fuser

- Preprinted papers that require a registration (the precise print location on the page) greater than ± 2.3 mm (± 0.9 in.), such as optical character recognition (OCR) forms

Note: In some cases, registration can be adjusted with a software application to successfully print on these forms.

- Coated papers (erasable bond), synthetic papers, thermal papers
- Rough-edged, rough or heavily textured surface papers, or curled papers
- Recycled papers that fail EN12281:2002 (European)
- Paper weighing less than 60 g/m^2 (16 lb)
- Multiple-part forms or documents

Selecting paper

Using appropriate paper prevents jams and helps ensure trouble-free printing.

To help avoid jams and poor print quality:

- *Always* use new, undamaged paper.
- Before loading paper, know the recommended print side of the paper. This information is usually indicated on the paper package.
- Do not use paper that has been cut or trimmed by hand.
- Do not mix paper sizes, types, or weights in the same source; mixing results in jams.
- Do not use coated papers unless they are specifically designed for electrophotographic printing.

Selecting preprinted forms and letterhead

Use these guidelines when selecting preprinted forms and letterhead:

- Use grain long for 60 to 90 g/m^2 (16 to 20 lb) weight paper.
- Use only forms and letterhead printed using an offset lithographic or engraved printing process.
- Avoid papers with rough or heavily textured surfaces.

Use papers printed with heat-resistant inks designed for use in xerographic copiers. The ink must be able to withstand temperatures up to 190°C (374°F) without melting or releasing hazardous emissions. Use inks that are not affected by the resin in toner. Inks that are oxidation-set or oil-based generally meet these requirements; latex inks might not. When in doubt, contact the paper supplier.

Preprinted papers such as letterhead must be able to withstand temperatures up to 190°C (374°F) without melting or releasing hazardous emissions.

Previous

Next

Go Back

Storing paper

Use these paper storage guidelines to help avoid jams and uneven print quality:

- For best results, store paper where the temperature is 21°C (70°F) and the relative humidity is 40%. Most label manufacturers recommend printing in a temperature range of 18 to 24°C (65 to 75°F) with relative humidity between 40 and 60%.
- Store paper in cartons when possible, on a pallet or shelf, rather than on the floor.
- Store individual packages on a flat surface.
- Do not store anything on top of individual paper packages.

2. Diagnostic information

Previous

Next

Go Back

Start

	<p>CAUTION</p> <p>Remove the power cord from the electrical outlet before you connect or disconnect any cable or electronic card or assembly for personal safety and to prevent damage to the printer.</p>
---	---

	<p>CAUTION—POTENTIAL INJURY:</p> <p>The printer weight is greater than 54 lbs (24.5kg), and requires two or more trained personnel to lift safely.</p>
---	---

Use the service error code, user status message, user error message, symptom table, service checks, and diagnostic aids in this chapter to determine the corrective action necessary to repair a malfunctioning printer. They will lead you to solutions or service checks, including the use of various tests.

Symptom tables

If your printer completes the **“Power-on self test (POST) sequence” on page 2-9** without an error, and you have a symptom, go to **“Symptom tables” on page 2-9**. Locate your symptom, and take the appropriate action.

Service errors (1xx.xx/9xx.xx)

If a service error code appears while you are working on the printer, go to **“1xx service error codes” on page 2-21** or **“9xx service error messages” on page 2-38**, and take the indicated action for that error.

Service error codes are indicated by a three-digit error code followed by a period and additional numbers in the format XXX.YY. In most cases, five digits are shown.

Paper jam messages (2xx.xx)

User attendance messages that indicate a paper jam have been included with the service error codes since repeated instances may indicate an underlying service issue. Go to **“2xx paper jam messages” on page 2-23**.

User status and attendance messages

- User status messages provide the user with information on the current status of the printer.
- User attendance messages are indicated by a two-digit code that provides the user with information that explains a problem with a print cartridge, option, port, and so on. If a user error message displays, see **“3x through 8x attendance messages” on page 2-13** or **“2xx paper jam messages” on page 2-23**.

Additional information

- **“Operator panel and menus” on page 2-2**
- **“Power-on self test (POST) sequence” on page 2-9**

Power-on self test (POST) sequence

When you turn the printer on, it performs a Power-On Self Test. Check for correct POST functioning of the base printer by observing the following:

1. The operator panel turns on and displays the Lexmark logo.
2. A progress bar displays.
3. The LED turns on.
4. The main fan turns on.
5. The machine performs the following tests:
 - a. Sensor check
 - b. Motor check—initializes the following motors:
 - i. Cam motor
 - ii. EP drive motor
 - iii. Fuser motor
 - iv. Cartridge motor
 - c. Supplies check

Note: The LED blinks red and an error message displays on the operator panel screen if the machine detects errors during these test phases.

6. The LED light indicator blinks.
7. The loading screen displays.

Additional messages may include: <ul style="list-style-type: none"> • Show Me—the printer will present instructions. • Cancel Job—the printer job can be cancelled.
Paper Changes Needed	
PC Unit Exposure Warning	This warning occurs when the front door is left open too long. Close the front door to prevent damage to the PC unit. Select Tell me more for further information.
Remove All Color Supplies	If Color Lockout mode is enabled, this message appears (unless the printer is in Diagnostics Menu or Configuration Menu).
Remove Paper Standard Bin	The standard output bin is full. Remove the media to continue.
Remove Packaging Material	If packaging material is detected by the printer, Check all areas, Check <area name>, or Check <number of> areas may appear. Press Select to continue.
Restore Held Jobs Go/Stop?	If the printer detects Print and Hold (or parked) jobs stored on the hard disk during Power-On Self Test (POST). Choices are: <ul style="list-style-type: none"> • Restore—Print jobs are restored, and Restoring Held Jobs x/y, where x is the number of the job restored and y is the total number of jobs to restore. You can quit restoring, and the remainder of the jobs will remain on the disk, but cannot be accessed until they are restored at the next POR. • Do not restore—Held jobs will remain on the disk, but cannot be accessed until they are restored at the next POR. Held jobs may not be restored appears. • Tell me more—additional information is available
Securely Clearing Disk Space	Disk wiping process is recovering disk space. The message clears when all memory blocks are cleared.
Tray Length Guide Missing	Replace the tray length guide.
Unsupported USB device, Please Remove	Remove the unrecognized device to continue.
Unsupported USB hub, Please Remove	Remove the unrecognized device to continue.
Unsupported Mode	Unplug camera and change it to a mode where the camera can access PictBridge. Plug the camera back in to continue.
Unsupported Disk	Remove the unsupported disk to continue.

82 Waste Toner Nearly Full	<ul style="list-style-type: none"> • Select Continue to clear the message and continue printing. • If printing continues, order a replacement waste toner box immediately. • If the problem persists, open the front access door and check the aligner shaft for binding. Clear the binding if possible. If not possible, contact your next level of service. 																
82 Replace Waste Toner	<ul style="list-style-type: none"> • Replace the waste toner box using the instruction sheet that comes with the replacement waste toner box. • Ensure that there is no interference between the waste toner box and the printer. • If the problem persists, open the front access door and check the aligner shaft for binding. Clear the binding if possible. • If the problem persists, replace the system board. See “System board removal” on page 4-163. • If the problem persists, contact your next level of service. 																

Error code	Action
82 Waste Toner Missing	<ul style="list-style-type: none"> • Insert the waste toner box. • Inspect the top cover camshaft assembly for proper operation. When the top access cover is closed, the printer should mechanically interlock. • Check the cable in connector JBUMP1 on the system board for defects and proper connection. If the cable wiring or the cable connection is defective, replace the bump multipurpose feeder/duplex motor assembly. See “Multipurpose feeder (MPF)/duplex motor assembly removal” on page 4-133. If the cable in JBUMP1 connector is damaged on the system board, replace the system board. See “System board removal” on page 4-163. • Check the aligner shaft and the mechanical system for binds. • Replace the bump multipurpose feeder/duplex motor assembly. See “Multipurpose feeder (MPF)/duplex motor assembly removal” on page 4-133. • If the problem persists, replace the system board. See “System board removal” on page 4-163.
82.41	If you continuously get this error, then the problem is the aligner motor error. Go to “147.xx, 906.05-906.08, 920.01—POST (power-on self test) aligner error service check” on page 2-57 .
83.xx Transfer Module Life Warning	<ul style="list-style-type: none"> • Select Continue to clear the message and continue printing. • Order a replacement transfer module. When print quality is reduced, install the new transfer module using the instruction sheet that comes with the replacement transfer module. • If the problem persists, replace the system board. See “System board removal” on page 4-163.
83.xx Replace Transfer Module	<ul style="list-style-type: none"> • Replace the transfer module using the instruction sheet that comes with the replacement transfer module. See “Transfer module removal” on page 4-179. • If the problem persists, replace the system board. See “System board removal” on page 4-163.
83.41 Transfer Module Missing	If the you continuously get this error, go to “920.03, 920.25—Transfer Module Missing or not connected service check” on page 2-99 .
84.11 <color> PC Unit Life Warning	<ul style="list-style-type: none"> • Select Ignore to clear the message and continue printing. • Order the specified photoconductor unit. When print quality is reduced, install the new specified photoconductor unit using the instruction sheet that comes with the replacement specified photoconductor unit. • If the problem persists, replace the system board. See “System board removal” on page 4-163.
84 Replace <color> PC Unit	<ul style="list-style-type: none"> • Replace the specified photoconductor unit using the instruction sheet that comes with the replacement specified photoconductor unit. Navigate to Menu > Supplies menu > Replace supplies. • If the problem persists, replace the system board. See “System board removal” on page 4-163. <p>Note: Make sure to reset the photoconductor unit counter(s).</p>

Error code	Action
84 <color> PC Unit Missing	<ul style="list-style-type: none"> • Scroll down the operator panel to see if the printer is showing that all four of the PC units are missing. If so, check the HVPS cable between the system board and the HVPS. Ensure that the cable is not plugged in backwards on the HVPS. Disconnect and reconnect the cable to make sure there is good contact. • Insert or reinstall the specified photoconductor unit and see if problem clears. See “Photoconductor unit removal” on page 4-150. • Swap the photoconductor unit between two locations and see if the problem moves with photoconductor unit. If problem follows the photoconductor unit, replace the photoconductor unit. See “Photoconductor unit removal” on page 4-150. • Remove the top access cover assembly (see “Top access cover assembly removal” on page 4-54), and confirm that the camshaft follower (A) on the left side is not out of the groove (B). If the camshaft follower is out of the groove, raise the arm, use a screwdriver to ease the camshaft follower back into the groove. You need to press down to <i>snap</i> it into position. <div style="text-align: center; margin: 10px 0;">  </div> <ul style="list-style-type: none"> • Check the high voltage contacts path, especially the “finger” on the specified photoconductor unit (printer is shown with components removed for clarity). <div style="text-align: center; margin: 10px 0;">  </div> <ul style="list-style-type: none"> • If the contacts are good, replace the HVPS. See “High-voltage power supply (HVPS) removal” on page 4-123. • If the problem persists, replace the system board. Service checks

31.xx—Cartridge errors service check

Step	Questions / actions	Yes	No
1	POR the printer. Did this fix the problem?	Problem resolved.	Go to step 2.
2	Replace the toner cartridge. Did this fix the problem?	Problem resolved.	Go to step 3.
3	Reseat the toner cartridges and make sure they are installed to their correct color slots. Did this fix the problem?	Problem resolved.	Go to step 4.
4	1. Check the contacts on the toner cartridge chip for damage and contamination. 2. Clean the contacts. Are the chip contacts damaged?	Replace toner cartridge.	Go to step 5.
5	1. Check the cartridge contact and bell crank on the printer. 2. Press each of the contacts to check the spring force. 3. Check the bell crank for any damage. Are the bell crank and cartridge contacts damaged?	Replace the cartridge contact with bell crank. Note: Only replace the parts that are damaged.	Go to step 6.
6	1. Check JSB1 on the system board for proper connection. 2. Check for damage and pinch points on the connector. 3. Reseat cable. Is the cable connector free of damaged?	Replace the cartridge contact with bell crank. Note: Only replace the parts that are damaged.	Go to step 7.
7	Check the whole length of the cable going to the cartridge contact. Check for any damage and pinch points. Are the cables damaged?	Replace the cartridge contact with bell crank. Note: Only replace the parts that are damaged.	Go to step 8.
8	Replace the system board. See “System board removal” on page 4-163. Did this fix the problem?	Problem resolved.	Replace the cartridge contact with bell crank. Note: Only replace the parts that are damaged.

110.xx—Mirror motor service check

Step	Questions / actions	Yes	No
1	View the Event Log: 1. Turn off the printer, press and hold buttons 3 and 6 , then turn on the printer. 2. Select EVENT LOG . 3. Select Display Log . Has an 110.xx error occurred three times or more?	Replace the printhead. See “Printhead removal, installation, and adjustment” on page 4-153.	Go to step 2.

Previous

Next

Go Back

Step	Questions / actions	Yes	No
2	Turn the printer off, and then remove the rear frame cover. See “Rear frame cover removal” on page 4-47 . Check the cable in connector JMIRR1 for proper connection to the system board, the printhead cable for pinch points, and the cable or connector for any other damage. Is the cable damaged?	Replace the printhead. See “Printhead removal, installation, and adjustment” on page 4-153 .	Go to step 3.
3	Measure the continuity across all of the fuses on the system board. Are any of the fuses blown?	Replace the system board. See “System board removal” on page 4-163 .	Go to step 4.
4	Perform the printhead verification to check whether the new printhead will solve the problem. See “Printhead verification” on page 3-39 . Perform the Mirror Motor Test. See “Mirror Motor Test” on page 3-20 . Did the Mirror Motor pass the test?	Replace the printhead. See “Printhead removal, installation, and adjustment” on page 4-153 .	Replace the system board. See “System board removal” on page 4-163 .

143.xx—Motor (EP drive assembly top cartridge 1 motor) error service check

Step	Questions / actions	Yes	No
1	1. Turn the printer off. 2. Remove the rear frame cover. See “Rear frame cover removal” on page 4-47. 3. Check the cable in connector JCARTP1 and JCARTS1 (cartridge motor 1/fuser motor cable) for proper connection to the system board, for the cable for pinch points, and for the cable or connector for any other damage. Is the cable damaged?	Replace the cartridge motor 1/fuser cable. See “Cartridge motor 1/fuser cable removal” on page 4-74.	Go to step 2.
2	Remove the right cover. See “Right cover removal” on page 4-51. Check the cartridge motor 1/fuser motor cable (A) for proper connection to the EP drive assembly, for pinch points for the cable, or damage to the cable or connector.  Is either cable damaged?	Replace the cartridge motor 1/fuser motor cable. See “Cartridge motor 1/fuser cable removal” on page 4-74.	Go to step 3.
3	Measure the continuity across all of the fuses on the system board. Are any of the fuses blown?	Replace the system board. See “System board removal” on page 4-163.	Go to step 4.
4	1. Disconnect the cartridge motor 1/fuser motor cable on the motor and on the system board. 2. Connect a new motor 1/fuser motor cable on the motor and on the system board. 3. Run diagnostics motor check. Bring the printer up in Diagnostics Menu (turn off the printer, press and hold buttons 3 and 6 , then turn on the printer). 4. Select MOTOR TESTS. Did the motor run?	Replace the cartridge motor 1/fuser motor cable. See “Cartridge motor 1/fuser cable removal” on page 4-74.	Go to step 5.

Steps before starting the 9yy service checks

Before starting the service checks in this section, you will need to retrieve certain information. This will aid your next level of support in diagnosing the problem before replacing the controller board.

Warning: Do not replace the controller board unless directed by your next level of support.

1. Collect the history information and firmware logs (Fwdebug and logs.tar.gz) from the SE menu.
2. Collect the settings from the menu settings page.
3. Collect information from the user.

Note: Not all of the items can be retrieved from the printer you are working on.

A. Collecting the history information from the SE menu

Note: Make sure your printer is connected to a network or to a print server.

1. From a Web browser, type `http://printer_IP_address/se`, and then press **Enter**.

Notes:

- `printer_IP_address` is the TCP/IP address of the printer
 - `se` is required to access the printer diagnostic information
2. Click **History Information**, copy all information, and then save it as a text file.
 3. E-mail the text file to your next level of support.

B. Collecting the firmware logs (Fwdebug and logs.tar.gz) from the SE menu

Notes:

- Make sure your printer is connected to a network or to a print server.
 - Some printers are designed to restart automatically after a 9yy error. On these printers, you can retrieve the secondary crash code information using the SE menu.
 - Fwdebugs can also be referred to as LBtrace. If FWEdebugs does not appear in the list, then look for LBtrace. Multiple LBtrace logs can appear in the list of links referred to in step 2.
1. From a Web browser, type `http://printer_IP_address/se`, and then press **Enter**.
 2. Click **List Fwdebugs captured during reboots**. This will provide you a list of the secondary crash codes retrieved from prior reboots.

Note: If there are Fwdebugs listed, click **Dump Fwdebug log0**, **Dump Fwdebug log1**, and **Dump Fwdebug log2**. Clicking these links will dump the debug logs to the computer. Take note of the destination folder where the logs are saved.

- E-mail the logs to your next level of support.

Note: Some machine SE menus give you the option of clicking **Logs Gzip Compressed**. If this option is shown in the menu, then click it and retrieve the compressed log file. Take note of the destination folder where the log file is saved.

C. Collecting the settings from the menu settings page

Note: The menu settings page is different for each printer. For more information see the *User's Guide*. Your next level of support will tell you which page they want to see.

Copying the menu settings page from the Embedded Web Server (EWS)

Note: Make sure your printer is connected to a network or to a print server.

- From a Web browser, type `http://printer_IP_address`, and then press **Enter**.
- Click **Settings**, and then select one of the settings page from the links shown on the page.
- Copy all information, and then save it as a text file.
- E-mail the text file to your next level of support.

Printing the menu settings page

- From the home screen, navigate to **Reports > Menu Settings Page**.
- Print the menu settings page, and then use Scan to E-mail to send it to your next level of support.

D. Collecting information from the user

Ask the user for information about the following:

- Print job being run
- Operating system used
- Print driver used
- Other information on what was happening when the 9yy error occurred.

900.00–900.99 (except 900.05)—System software error service check

Note: Make sure to perform the “**Steps before starting the 9yy service checks**” on page 2-94 first before proceeding.

There are different types of 900.xx errors that can occur. There may be a communication problem (Bad cable, network connection, and so on) software issue, or a hardware problem with the controller board, or ISP (Internal solutions port). The communication and software aspects should be checked first. Determine if the problem is constant or intermittent. Use the troubleshooting procedure below to isolate the issue. Take any notes as instructed. You will need that information in the event you need to contact your next level support.

Note: Before troubleshooting, determine the operating system used when the error occurred. If possible determine whether a PostScript or PCL file was sent to the device when the error occurred. Ask the customer which Lexmark Solutions applications are installed on the device.

Step	Action and questions	Yes	No
1	POR the device. Does the error reoccur?	Go to step 2.	Problem resolved.

900.05—Transfer module error service check

Step	Questions / actions	Yes	No
1	1. Turn the printer off. 2. Remove the rear frame cover. See “Rear frame cover removal” on page 4-47. 3. Check the transport cable in connector JTPS1 for proper connection to the system board. 4. Open the front access door and check the transport cable for pinch points and any other damage to the cable or connector. Is the cable damaged?	Replace the transport cable. See “Transport cable removal” on page 4-181.	Go to step 2.
2	Replace the transfer module. Does the error clear?	Problem resolved.	Replace the system board. See “System board removal” on page 4-163.

902.59—Engine software error, NVRAM MGR problem service check

Step	Questions / actions	Yes	No
1	1. Turn off the printer. 2. Remove the rear frame cover. See “Rear frame cover removal” on page 4-47. 3. Check JPH1 and JTPS1 for proper connection and damage. 4. Check the transport cable on the transfer belt module side for any damage. Is either of the cables damaged?	If the JTPS1 cable is damaged, replace the JTPS1 cable. If the JPH1 cable is damaged, replace the printhead assembly. See “Printhead removal, installation, and adjustment” on page 4-153	Go to step 2.

Step	Questions / actions	Yes	No
2	1. Reseat the JPH1 and JTPS1 cables. 2. Reseat the transport cable on the transfer belt module side. 3. Power on the printer. Does the problem persist?	Go to step 3.	Problem resolved.
3	Install a new transfer module to verify if the old transfer module is defective. Does the problem persist?	Go to step 4.	Replace the transfer module. See “Transfer module removal” on page 4-179.
4	Connect a new transport cable from outside of the machine. Does the problem persist?	1. Return the old transfer module and transport cable. 2. Go to step 5.	Replace the transport cable. See “Transport cable removal” on page 4-181.
5	Connect a new printhead assembly from outside of the printer and verify the printhead. See “Printhead verification” on page 3-39. Does the problem persist?	Replace the system board. See “System board removal” on page 4-163.	Replace the printhead assembly. See “Printhead removal, installation, and adjustment” on page 4-153

920.04—POST (power-on self test) fuser motor not connected error service check

Step	Questions / actions	Yes	No
1	Turn the printer off, and then remove the rear frame cover. See “Rear frame cover removal” on page 4-47. Reseat the cables in connectors JCARTP1) and JCARTS1. Does the error clear?	Problem resolved.	Go to step 2.
2	Check the cartridge motor 1/fuser cable in connector JCARTP1 and JCARTS1 for pinch points and the cables or connectors for any other damage. Are the cables damaged?	Replace the cartridge motor1/fuser cable. See “Cartridge motor 1/fuser cable removal” on page 4-74.	Go to step 3.
3	Remove the right cover. See “Right cover removal” on page 4-51. Check the cartridge motor 1/fuser motor cable (A) for proper connection to the EP drive assembly, pinch points for the cable, and damage to the cable or connector.  Is either cable damaged?	Replace the cartridge motor 1/fuser motor cable. See “Cartridge motor 1/ fuser cable removal” on page 4-74.	Go to step 4.
4	1. Disconnect the cable connecting motor 1/ fuser motor cable and cartridge motor 2/ motor 3, and connect the cable to the new EP drive assembly outside the machine. 2. POR the printer, then check if the error remains. Did the error clear?	Replace the EP drive assembly. See “Electrophotographic (EP) drive assembly removal” on page 4-98.	Go to step 5.

Step	Questions / actions	Yes	No
5	Connect a new cartridge motor1/fuser motor cable to the old EP drive assembly without installing it into the machine. Did the error clear?	Replace the cartridge motor 1/fuser motor cable. See “Cartridge motor 1/ fuser cable removal” on page 4-74.	Replace the system board. See “System board removal” on page 4-163.

920.05—POST (power-on self test) printhead motor not connected error service check

Step	Questions / actions	Yes	No
1	1. Turn the printer off. 2. Remove the rear frame cover. See “Rear frame cover removal” on page 4-47. 3. Reseat the cables in connector JMIRR1. Does the error clear?	Problem resolved.	Go to step 2.
2	Check the cables in connector JMIRR1 for pinch points and any other damage to the cables or connectors. Is the cable damaged?	Replace the printhead. See “Printhead removal, installation, and adjustment” on page 4-153.	Go to step 3.
3	Measure the continuity across all of the fuses on the system board. Are any of the fuses blown?	Replace the system board. See “System board removal” on page 4-163.	Go to step 4.
4	1. Perform the printhead verification to check whether the new printhead solves the problem. See “Printhead verification” on page 3-39. 2. Navigate to PRINTHEAD TESTS > Mirror Motor Test. Did the mirror motor pass the test?	Replace the printhead. See “Printhead removal, installation, and adjustment” on page 4-153.	Replace the system board. See “System board removal” on page 4-163.

920.06—Input sensor service check

Step	Questions / actions	Yes	No
1	Is the input sensor flag damaged?	Replace the paper pick mechanism. See “Paper pick mechanism assembly removal” on page 4-145.	Go to step 2.
2	1. Turn the printer off. 2. Remove the rear frame cover. See “Rear frame cover removal” on page 4-47. 3. Check the cable in connector JTRAY1 for proper connection to the system board, for pinch points, and any other damage to the cable or connector. Is the cable damaged?	Replace the paper pick mechanism. See “Paper pick mechanism assembly removal” on page 4-145.	Go to step 3.

Step	Questions / actions	Yes	No
3	<ol style="list-style-type: none"> 1. Disconnect the cable in connector JTRAY1. 2. Connect the cable from the new paper pick assembly in connector JTRAY1. 3. Bring the printer up in Diagnostics Menu (turn off the printer, press and hold buttons 3 and 6, then turn on the printer). 4. Navigate to SENSOR TESTS > Dynamic Sensors > Input. 5. Activate the input sensor. Did the input sensor change from Open to Closed?	Replace the paper pick mechanism. See “Paper pick mechanism assembly removal” on page 4-145.	Replace the system board. See “System board removal” on page 4-163.

920.07—POST (power-on self test)—Narrow media sensor error service check

Step	Questions / actions	Yes	No
1	Turn the printer off, and then remove the rear frame cover. See “Rear frame cover removal” on page 4-47. Reseat the cable in connector JTRAY1. Does the error clear?	Problem resolved.	Go to step 2.
2	Check the cable in connector JTRAY1 for pinch points and the cable or connector for any other damage. Is the cable damaged?	Replace the paper pick mechanism. See “Paper pick mechanism assembly removal” on page 4-145.	Go to step 3.
3	POR the printer. Place a voltmeter between JTRAY1(pin 4), and ground (pin 1). Does the meter read 5 V dc?	Go to step 4.	Replace the system board. See “System board removal” on page 4-163.
4	<ol style="list-style-type: none"> 1. Disconnect the cable in JTRAY1. 2. Connect the cable from the new paper pick mechanism. 3. Bring the printer up in Diagnostic menu (turn off the printer, press and hold buttons 3 and 6, then turn on the printer). 4. Navigate to SENSOR TESTS > Dynamic Sensors > Narrow Media. 5. Activate the narrow media sensor.  Did the narrow media sensor change from Closed to Open?	Replace the paper pick mechanism. See “Paper pick mechanism assembly removal” on page 4-145.	Replace the system board. See “System board removal” on page 4-163.

920.08—Exit sensor service check

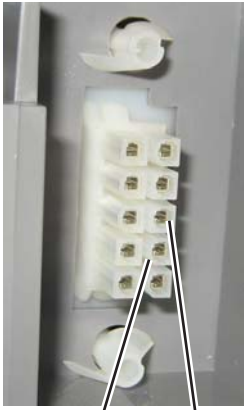

Previous

Next

Go Back

Step	Questions / actions	Yes	No
1	Verify the paper is loaded properly in the paper tray or manual feed slot. Is the paper properly loaded?	Go to step 2.	Load paper correctly.
2	1. Turn the printer off. 2. Install the new fuser. See “Fuser removal” on page 4-118 Note: Do not reset fuser count or run motor calibration yet. 3. POR the printer. Did the error clear?	Problem resolved. Note: Complete the fuser installation: reset fuser count and run motor calibration. See “Fuser removal” on page 4-118.	Remove the new fuser, and go to step 3.
3	Remove the rear frame cover. See “Rear frame cover removal” on page 4-47. Check the fuser DC cable in the connector JFUSER1 for proper connection to the system board, for pinch points, and for any other damage to the cable or the connector. Is the cable damaged?	Replace the fuser DC cable. See “Fuser DC cable removal” on page 4-121.	Go to step 4.
4	Place a voltmeter between the fuser DC autoconnect pin 8 and ground (pin 6).  Pin 8 Pin 6(ground) Does the meter read +5 V dc?	Go to step 6.	Go to step 5.
5	Place a voltmeter between the connector JFUSER1 pin 8 and ground (pin 6) on the system board. Does the meter read +5 V dc?	Go to step 6.	Replace the fuser DC cable. See “Fuser DC cable removal” on page 4-121.

Step	Questions / actions	Yes	No
6	<ol style="list-style-type: none"> 1. Replace the fuse without resetting the fuser count. 2. Bring the printer up in Diagnostics Menu (turn off the printer, press and hold buttons 3 and 6, then turn on the printer). 3. Navigate to SENSOR TESTS > Dynamic Sensors > Fuser Exit. 4. Open the front door, and then the top access cover. 5. Activate the fuser exit sensor.  <p>Did the fuser exit sensor change from Open to Closed?</p>	Replace fuser and reset the fuser count. See “Fuser removal” on page 4-118.	Replace the system board. See “System board removal” on page 4-163.

Step	Questions / actions	Yes	No
1	<p>Turn the printer off, and then remove the rear frame cover. See “Rear frame cover removal” on page 4-47.</p> <p>Reseat the cables in connectors JCARTP1 and JCARTS1.</p> <p>Does the error clear?</p>	Problem resolved.	Go to step 2.
2	<p>Check the cables in connectors JCARTP1 and JCARTS1 for pinch points and any other damage to the cables or connectors.</p> <p>Is the cable damaged?</p>	Replace the cartridge motor 1/fuser cable. See “Cartridge motor 1/fuser cable removal” on page 4-74.	Go to step 3.
3	<p>Remove the right cover. Check the cartridge motor 1/fuser motor cable (A) for proper connection to the EP drive assembly, pinch points for the cable, or any other damage to the cable or connector.</p>  <p>Is either cable damaged?</p>	Replace the cartridge motor 1/fuser motor cable. See “Cartridge motor 1/fuser cable removal” on page 4-74.	Go to step 4.
4	<p>Measure the continuity across all of the fuses on the system board.</p> <p>Are any of the fuses blown?</p>	Replace the system board. See “System board removal” on page 4-163.	Go to step 5.
5	<p>Plug in a new EP drive assembly cartridge motor 1 with the old cable from outside the machine.</p> <p>Does the problem persist?</p>	Go to step 6.	.Replace the EP drive assembly. See “Electrophotographic (EP) drive assembly removal” on page 4-98.
6	<p>Plug in a new EP drive assembly cartridge motor 1 with a new cable from outside the machine.</p> <p>Does the problem persist?</p>	Replace the system board. See “System board removal” on page 4-163.	Replace cartridge motor 1/fuser cable. See “Cartridge motor 1/fuser cable removal” on page 4-74

920.14—POST (power-on self test)—Cartridge motor 2 not connected error service check

Step	Questions / actions	Yes	No
1	<p>1. Turn the printer off.</p> <p>2. Remove the rear frame cover. See “Rear frame cover removal” on page 4-47.</p> <p>3. Reseat the cables in connector JCARTP2 and JCARTS2.</p> <p>Does the error clear?</p>	Problem resolved.	Go to step 2.
2	<p>Check the cable in connector JCARTP2 and JCARTS2 for pinch points and any other damage to the cable or connector.</p> <p>Are the cables damaged?</p>	Replace the cartridge motor 2/3 cable. See “Cartridge motor 2/3 cable removal” on page 4-77.	Go to step 3.
3	<p>Remove the right cover. See “Right cover removal” on page 4-51. Check the cartridge motor 2/3 cable for the proper connection to the EP drive assembly, pinch point for the cable, or damage to the cable or connectors.</p>  <p>Is either cable damaged?</p>	Replace the cartridge motor 2/3 cable. See “Cartridge motor 2/3 cable removal” on page 4-77.	Go to step 4.
4	<p>Measure the continuity across all of the fuses on the system board.</p> <p>Are any of the fuses blown?</p>	Replace the system board. See “System board removal” on page 4-165.	Go to step 5.
5	<p>Connect a new cartridge motor 1/fuser cable from the outside of the machine.</p> <p>Did the error clear?</p>	Replace the cartridge motor 1/fuser cable. See “Cartridge motor 1/fuser cable removal” on page 4-74.	Go to step 6.
6	<p>Connect the old cartridge motor 1/fuser motor cable to a new EP drive assembly outside of the machine.</p> <p>Did the error clear?</p>	Replace the EP drive assembly. See “Electrophotographic (EP) drive assembly removal” on page 4-98	Replace system board. See “System board removal” on page 4-163.

920.15, 920.20—POST (power-on self test)—Bad transfer module NVRAM data error service check

Previous

Next

Go Back

Step	Questions / actions	Yes	No
1	1. Turn the printer off. 2. Remove the rear frame cover. See “Rear frame cover removal” on page 4-37. 3. Check the JTPS1 connector for any damage, and then reseal the JTPS1 cable. 4. Check the transport cable connection to the transport belt for any damages. a. Open the front door cover b. Reseat the transport cable in the transfer belt module. Did the error clear?	Problem resolved.	Go to step 2.
2	Replace the transfer belt module. See “Transfer module removal” on page 4-179. Does the problem persist?	Go to step 3.	Problem resolved.
3	Connect a new transport cable from outside of the machine. Does the problem persist?	Return the old transport belt module and old transport cable then replace the system board. See “System board removal” on page 4-163.	Return the old transport belt module and replace the transport cable. See “Transport cable removal” on page 4-181.

920.16—POST (power-on self test)—Bad printhead NVRAM data error service check

Step	Questions / actions	Yes	No
1	Turn the printer off, and then remove the rear frame cover. See “Rear frame cover removal” on page 4-47. Reseat the large printhead cable in connector JPH1. Does the error clear?	Problem resolved.	Go to step 2.
2	Check the cable in connector JPH1 for pinch points and any other damage to the cable or connector. Is the cable damaged?	Replace the printhead. See “Printhead removal, installation, and adjustment” on page 4-153.	Go to step 3.
3	Perform the printhead verification to check whether the printhead replacement fixes the problem. See “Printhead verification” on page 3-39. POR the printer. Did the error clear?	Replace the printhead. See “Printhead removal, installation, and adjustment” on page 4-153.	Replace the system board. See “System board removal” on page 4-163.

920.17—POST (power-on self test)—Output bin cable not connected error service check

Step	Questions / actions	Yes	No
1	1. Turn the printer off. 2. Remove the rear frame cover. See “Rear frame cover removal” on page 4-47. 3. Reseat the bin full sensor cable in connector JBIN1. Does the error clear?	Problem resolved.	Go to step 2.
2	Check the bin full sensor cable in connector JBIN1 for pinch points and any other damage to the cable or connector. Is the cable damaged?	Replace the bin full sensor with cable. See “Bin full sensor removal” on page 4-65.	Go to step 3.
3	1. Disconnect the cable in the JBIN1 connector. 2. Connect the new bin full flag cable in the JBIN connector. 3. Bring the printer up in Diagnostic menu (turn off the printer, press and hold buttons 3 and 6 , then turn on the printer). 4. Navigate to SENSOR TESTS > Other Sensors > Bin Full Test. 5. Activate the new bin full sensor by placing a sheet of paper in the sensor.  Did the bin full sensor change from Open to Closed?	Replace the bin full sensor and cable. See “Bin full sensor removal” on page 4-65.	Replace the system board. See “System board removal” on page 4-163.

Go Back

920.18—POST (power-on self test)—Cartridge motor 3 not connected error service check

Previous

Next

Go Back

Step	Questions / actions	Yes	No
1	Turn the printer off and remove the rear frame cover. See “Rear frame cover removal” on page 4-47. Reseat the cables in connectors JCARTP2 and JCARTS2. Does the error clear?	Problem resolved.	Go to step 2.
2	Measure the continuity across all of the fuses on the system board. Are any of the fuses blown?	Replace the system board. See “System board removal” on page 4-163.	Go to step 3.
3	1. Remove the right cover. See “Right cover removal” on page 4-51. 2. Check the connections on the cartridge motor 2/3 cables and reseat the cables. 3. Check the routing on the cables for pinch points and any other damage to the cables or the connectors. Is the cable free from damage?	Replace the cartridge motor 2/3 cable. See “Cartridge motor 2/3 cable removal” on page 4-77.	Go to step 4.
4	Connect a new Cartridge motor 2/3 cable from outside of the machine, then POR the printer. Note: Verify first if the cable is working properly by testing connections of the cable on motor 2 and 3 to the JCARTP2 and JCARTS2 connectors. Route the cables properly only when you have verified that the cables are working properly. Did the error clear?	Replace the cartridge motor 2/3 cable. See “Cartridge motor 2/3 cable removal” on page 4-77.	Go to step 5.
5	Connect a new EP drive assembly from the outside of the machine. Note: Verify first if the EP drive assembly is working properly. Connect the cables on the fuser motor, cartridge motor 1, 2, and 3 on the new EP drive assembly. Route the cables properly only when you have verified that the cables are working properly. Did the error clear?	Return the old cartridge motor 2/3 cable and replace the EP drive assembly. See “Electrophotographic (EP) drive assembly removal” on page 4-98	Return the old EP drive assembly and the old cartridge motor 2/3 cable, then replace the system board. See “System board removal” on page 4-163.

920.19—POST (power-on self test)—Transfer module stepper motor not connected error service check

Step	Questions / actions	Yes	No
1	Turn the printer off, and then remove the rear frame cover. See “Rear frame cover removal” on page 4-47. Reseat the motor driver cable in connector JDVR1. Does the error clear?	Problem resolved.	Go to step 2.

Step	Questions / actions	Yes	No
2	Measure the continuity across all of the fuses on the system board. Are any of the fuses blown?	Replace the system board. See “System board removal” on page 4-163.	Go to step 3.
3	1. Open the right cover. 2. Reseat the motor driver cable on the motor driver side (A). 3. Reseat all cables connected to the motor driver card.  A Did this clear the error?	Problem resolved.	Go to step 4.
4	Note: Connect a new motor driver cable from outside of the machine. Make sure to verify first if the motor driver cable is working properly by connecting one end to the motor driver card, and the other end to the JDVR1 connector on the system board. Route the cables properly only when you have verified that the cable is working properly. Did this clear the error?	Replace the motor driver cable. See “Motor driver cable removal” on page 4-130.	Go to step 5.
5	Connect a new transport motor cable. Did this clear the error?	Return the original part from the printer and replace the transport motor cable. See “Transport motor cable removal” on page 4-183.	Go to step 6.
6	Connect a new motor driver card. Did this clear the error?	Return the original parts of the printer and replace the motor driver card. See “Motor driver card removal” on page 4-129.	Go to step 7.
7	1. Connect a new EP drive assembly from outside of the machine. 2. Transfer the motor driver card and cables to the new EP drive assembly and connect the cables. Did this clear the error?	Replace the EP drive assembly and connect the original parts back to the machine. See “Electrophotographic (EP) drive assembly removal” on page 4-98.	Replace the system board. See “System board removal” on page 4-163.

920.21—POST (power-on self test)—24 V power supply failure error service check

Step	Questions / actions	Yes	No
1	<p>Note: The LVPS must be turned off for several seconds before turning back on. This error can occur if the LVPS does not have time to recover after being turned off.</p> <ol style="list-style-type: none"> 1. Open the front door cover 2. Check the 24V interlock switch for damage and proper installation. 3. Check if the front door actuator can trigger the sensor. <p>Is the front door sensor actuator able to trigger the sensor?</p>	Go to step 3.	Go to step 2.
2	<ol style="list-style-type: none"> 1. Check if the front door assembly can close properly. 2. Check the front door pivot for any damage. 3. Check if the front door can close properly. <p>Is the front door damaged?</p>	Replace the front door. See “Front door assembly removal” on page 4-108.	Go to step 3.
3	<ol style="list-style-type: none"> 1. Check the cable in connector JCVR1 for proper connection to the system board, pinch points, and for any other damage to the cable or connector. 2. Reseat the cable. <p>Did the error clear?</p>	Problem resolved.	Go to step 4.
4	<ol style="list-style-type: none"> 1. Disconnect the cable in connector JCVR1 2. Connect a new 24 V interlock switch without properly routing the cables. <p>Note: The 24V interlock switch should be plugged in without installing inside the machine. Close the covers, manually actuate the switch, and then turn on the machine.</p> <p>Did the error clear?</p>	Replace the 24 V interlock switch. See “24 V interlock switch removal” on page 4-63.	Go to step 5.
5	<p>Check the input voltage switch on the back of the low-voltage power supply (LVPS). Some power supplies do not have the switch.</p> <p>Note: If your FRU does not have a switch, proceed to step 6.</p> <p>Is the voltage level (115/230) properly set?</p>	Go to step 6.	Set the switch for the proper voltage supported by your country.
6	<p>Reseat the cable in connector JLVPS1.</p> <p>Did the error clear?</p>	Problem resolved.	Go to step 7.
7	<p>Replace the LVPS.</p> <p>Note: Verify first if the new LVPS is working properly before installing it inside the machine. Remove the old LVPS, and install the new LVPS without installing the screws. Connect the fuser and JLVPS1 connectors to the new LVPS.</p> <p>Did the error clear?</p>	Replace the LVPS. See “Low-voltage power supply (LVPS) removal” on page 4-127.	Replace the system board. See “System board removal” on page 4-163.

920.23—POST (power-on self test)—Duplex motor not connected error service check

Step	Questions / actions	Yes	No
1	Turn the printer off, and then remove the rear frame cover. See “Rear frame cover removal” on page 4-47. Reseat the cable in connector JDX1. Does the error clear?	Problem resolved.	Go to step 2.
2	Measure the continuity across all of the fuses on the system board. Are any of the fuses blown?	Replace the system board. See “System board removal” on page 4-163.	Go to step 3.
3	Remove the right cover. See “Right cover removal” on page 4-51. Check the MPF/duplex motor cable in connector JDX1 for pinch points and any other damage to the cable or connector. Check both ends of the cable.  Is the cable damaged?	Replace the MPF/duplex motor cable. See “Multipurpose feeder (MPF)/duplex motor cable removal” on page 4-136. Note: Make sure to verify if the new cable is working properly first. Route the cables properly only when you have verified that the cables are working properly.	Go to step 4.
4	1. Replace the MPF/duplex motor assembly. See “Multipurpose feeder (MPF)/duplex motor assembly removal” on page 4-133. Note: Before replacing a motor, always verify if the new part is working properly by connecting it outside of the machine, 2. POR the printer and check if the error is gone. Did the error clear?	Problem resolved.	Replace the system board. See “System board removal” on page 4-163.

920.32—MPF paper present sensor not connected service check

Step	Questions / actions	Yes	No
1	Check the cable in connector JMPFPP1 for proper connection, reseal cable. Did the error clear?	Problem resolved.	Go to step 2.
2	1. Check the connection on the paper present sensor side. 2. Check for damage and pinch points on the cable. 3. Reseat cable. Did this fix the problem?	Problem resolved.	Go to step 3.
3	Replace the MPF paper present sensor. See “Multipurpose feeder (MPF) paper present sensor” on page 4-137. Note: Before replacing a part, always verify by connecting the part outside of the machine. Did the error clear?	Problem resolved.	Replace the system board. See “System board removal” on page 4-163.

925.01, 925.03, 925.05—Fan error service check

Step	Questions / actions	Yes	No
1	Turn the printer off, and then remove the rear frame cover. See “Rear frame cover removal” on page 4-47. Check the cable in connector JFAN1 for proper connection to the system board, for pinch points, and for any other damage to the cable or the connector. Is the cable damaged?	Replace the fan. See “Cooling fan removal” on page 4-93.	Go to step 2.
2	Measure the continuity across all of the fuses on the system board. Are any of the fuses blown?	Replace the system board. See “System board removal” on page 4-163.	Go to step 3.

Step	Questions / actions	Yes	No
3	<p>1. Disconnect the cable in connector JFAN1, and install a new fan.</p> <p>2. Turn the multifunction printer off, and turn the MFP on (perform a POR).</p> <p>Note: After installing the new fan, a print test is required to verify operation. Print one page every 30 seconds for 20 minutes to test the highest fan speed. Do not test unless the fan is installed in the machine.</p> <p>Did the error clear?</p>	<p>Replace the cooling fan. See “Cooling fan removal” on page 4-93.</p>	<p>Replace the system board. See “System board removal” on page 4-163.</p>

950.00–950.29—EPROM mismatch failure

Warning: When replacing any one of the following components:

- System board
- Operator assembly card or top access cover assembly

Replace only one component at a time or the printer will be rendered inoperable. Replace the required component, bring the printer up in Diagnostic menu (see **“Diagnostics menu” on page 3-2**), and verify that the problem is fixed before performing a POR.

This error code indicates a mismatch between the operator panel assembly and the system board.

Step	Questions / actions	Yes	No
1	Has the operator panel assembly been replaced recently?	Replace the operator panel assembly with a new, and not previously installed, operator panel assembly. See “Operator panel assembly removal (C746)” on page 4-34 or “Operator panel assembly removal (C748)” on page 4-37 .	Go to step 2.
2	Has the top access cover assembly been replaced recently?	Replace the top access cover assembly with a new, and not previously installed, operator panel assembly. See “Top access cover assembly removal” on page 4-54 .	Go to step 3.
3	Has the system board been replaced recently?	Replace the system board with a new, and not previously installed, system board. See “System board removal” on page 4-163 .	Go to step 4.
4	Turn the printer power off for ten or more seconds. Then turn the printer back on (POR the printer). Is the error gone, and can the printer print?	Problem resolved.	Go to step 5.
5	Clear the NVRAM of the printer: 1. Turn the printer power off. 2. With the printer off, press and hold buttons 2, 6, 7, and 8 . 3. Turn the printer power on. 4. When the printer screen displays Restoring Factory Defaults, release the buttons. Note: If the printer locks up on the Restoring Factory Defaults, wait two minutes, and then turn the printer power off. After ten seconds or more, turn the printer power back on without holding down any buttons. Is the error message still displayed?	Go to step 6.	Problem resolved.

Dead printer service check

A dead printer is a condition where the display is blank, the LED on the operator panel is off, no fans turn, no motors turn, and the fuser lamp does not come on.

If a 550-sheet option assembly is installed, remove the option and check the base printer for correct operation. If the base printer operates correctly, replace the 550-sheet option assembly.

Warning: Observe all necessary ESD precautions when removing and handling the system board or any installed option cards or assemblies. See **“Handling ESD-sensitive parts” on page 4-2.**

	<p>CAUTION</p> <p>When you see this symbol, there is a danger from hazardous voltage in the area of the product where you are working. Unplug the product before you begin, or use caution if the product must receive power in order to perform the task.</p>
---	---

Remove any input and output paper handling options from the printer.

Step	Questions / actions	Yes	No
1	Check the AC line voltage. Is the line voltage correct?	Go to step 2.	Inform the customer.
2	Is the AC line cord damaged?	Replace the line cord.	Go to step 3.
3	Check the system board for +5 V dc between JLVPS2 pin 1 and ground. Is the voltage correct?	Replace the system board. See “System board removal” on page 4-163.	Go to step 4.
4	Is the JLVPS2 cable correctly installed at JLVPS2 on the system board?	Go to step 5.	Reseat the JLVPS2 cable.
5	Turn the printer off. Disconnect the JLVPS2 cable from the system board. Turn the printer on, and then measure the voltage between the JLVPS2 cable pin 1 and the JLVPS2 pin 14 (black wire). Does this measure approximately +5 V dc?	Go to step 6.	Replace the LVPS. See “Low-voltage power supply (LVPS) removal” on page 4-127.
6	1. Turn the printer off. 2. Disconnect the cables in J5, JCARTS1, JCARTS2, JDVR1, JFDPCK1, JFUSER1, JINT1, JOPT1, and JTLBT1. 3. Connect the JLVPS2 cable to the system board. 4. POR the printer. Does the printer still appear dead?	Contact your next level of support.	Go to step 7.
7	1. Connect one cable at a time, and POR the printer. 2. Is the printer dead?	The part connected to that cable is faulty. Replace the failing part.	Connect another cable and continue with this step.

Networking service check

Note: Before starting this service check, print out the network setup page. This page is found under **Menu—Reports—Network Settings**. Consult the network administrator to verify that the physical and wireless network settings displayed on the network settings page for the device are properly configured. If a wireless network is used, verify that the printer is in range of the host computer or wireless access point, and there is no electronic

Previous

Next

Go Back

interference. Have the network administrator verify that the device is using the correct SSID, and wireless security protocols. For more network troubleshooting information, consult the Lexmark Network Setup Guide.

Step	Questions / actions	Yes	No
1	If the device is physically connected to the network, verify that the ethernet cable is properly connected on both ends. Is the cable properly connected?	Go to step 3. If the network is wireless, got to step 3.	Go to step 2.
2	Connect the ethernet cable. Did this fix the problem?	Problem resolved	Go to step 3.
3	Check the printer's online status under Printers and Faxes on the host computer. Delete all print jobs in the print queue. Is the printer online and in a Ready state.	Go to step 5.	Go to step 4.
4	Change the printer status to online. Did this fix the issue?	Problem resolved.	Go to step 5.
5	Does the IP address displayed on the network settings page match the IP address in the port of the drivers using the printer?	Go to step 10.	Go to step 6.
6	Does the LAN use DHCP? Note: A printer should use a static IP address on a network.	Go to step 7.	Go to step 9.
7	Are the first two segments if the IP address 169.254?	Go to step 8.	Go to step 9
8	POR the printer. Is the problem resolved	Problem resolved	Go to step 10.
9	Reset the address on the printer to match the IP address on the driver. Did this resolve the issue?	Problem fixed.	Go to step 10.
10	Have the network admin verify that the printer and PC's IP address have identical subnet addresses. Are the subnet addresses the same?	Go to step 12.	Go to step 11.
11	Using the subnet address supplied by the network admin, assign a unique IP address to the printer. Do not assign an address that is already in use on the network. Note: The printer IP address should match the IP address on the printer driver. Did this fix the problem?	Problem resolved.	Go to step 12.
12	Is the device physically connected (ethernet cable) to the network?	Go to step 13.	Go to step15.
13	Try using a different ethernet cable. Did this remedy the situation?	Problem resolved.	Go to step 14.
14	Have the network administrator check the network drop for activity. Is the drop functioning properly?	Replace the system board. See " System board removal " on page 4-163.	Contact the network administrator.

Step	Questions / actions	Yes	No
15	Is the printer on the same wireless network as the other devices?	Go to step 17.	Go to step 16.
16	Assign the correct wireless network to the printer. Did this fix the problem?	Problem resolved.	Go to step 17.
17	Are the other devices on the wireless network communicating properly?	Go to step 18.	Contact the network administrator.
18	Verify that the ISP wireless card cable is properly seated in their connectors. Is the wireless card seated correctly?	Go to step 20.	Go to step 19.
19	Properly reseal the ISP cables. Did this fix the problem?	Problem resolved.	Go to step 20.
20	Replace the ISP wireless card. See Installing an Internal Solutions Port (ISP). Did this fix the problem?	Problem resolved.	Replace the system board. See “System board removal” on page 4-163.

Operator panel service check

One or more operator panel buttons fail

Step	Questions / actions	Yes	No
1	Run the Button Test. See “Button Test” on page 3-14 in Diagnostics mode. Did any of the buttons fail the test?	Replace the operator panel assembly. See “Operator panel assembly removal (C746)” on page 4-34.	Go to step 2.
2	Disconnect the operator panel assembly cable from JOPP1 on the system board, and then measure the voltage on pin 6 and ground. Does the voltage measure approximately +3.3 V dc?	Replace the operator panel assembly. See “Operator panel assembly removal (C746)” on page 4-34. If this does not fix the problem, replace the top cover access assembly. See “Top access cover assembly removal” on page 4-54.	Replace the system board. See “System board removal” on page 4-163.

Operator panel display blank, five beeps, and LED is off

Service tip: The printer has detected a problem with the system board, the operator panel assembly cable (part of the top cover access assembly), or the operator panel assembly if POST does not complete. The printer emits five *beeps*, and then sticks in a continuous pattern until the printer is turned off.

Step	Questions / actions	Yes	No
1	Is the operator panel assembly cable properly installed at system board JOPP1 and at the operator panel assembly?	Go to step 2.	Reinstall the cable.
2	Measure the voltage between JOPP1 pin 2 and ground on the system board. Is the voltage approximately +5 V dc?	Go to step 3.	Replace the system board. See “System board removal” on page 4-163.
3	Check continuity of the operator panel assembly cable. Is there continuity?	Replace the operator panel assembly. See “Operator panel assembly removal (C746)” on page 4-34.	Replace the top cover access assembly. See “Top access cover assembly removal” on page 4-54.

Operator panel display blank, five beeps, LED on

Service tip: The printer has detected a problem with the system board, the operator panel assembly cable (part of the top cover access assembly), or the operator panel assembly if POST does not complete. The printer emits five *beeps*, and then sticks in a continuous pattern until the printer is turned off.

Step	Questions / actions	Yes	No
1	Check for ground between JOPP1 pin 4 and ground. Is the voltage approximately 0 V dc?	Replace the operator panel assembly. See “Operator panel assembly removal (C746)” on page 4-34.	Go to step 2.

Step	Questions / actions	Yes	No
2	Check the operator panel assembly cable. Is the cable damaged?	Replace the top cover access assembly. See “Top access cover assembly removal” on page 4-54.	Replace the system board. See “System board removal” on page 4-163.

Go Back

Stripes display, distorted display, and other display issues

Step	Questions / actions	Yes	No
1	1. Turn off the printer. 2. Open the rear cover. 3. Reseat the operator panel cable (J2) on the system board. 4. Check the J2 connector on the system board for any damage. Is the connector damaged?	Replace the system board. See “System board removal” on page 4-163.	Go to step 2.
2	1. Turn off the printer. 2. Disconnect the J2 operator panel cable. 3. Connect a new top access cover assembly from outside of the machine for verification. Does the problem persist?	Return to the Old Top access cover assembly, then go to step 6.	Return to the Old Top access cover assembly, then go to step 3.
3	1. Open the top access cover assembly, Refer to “Top access cover assembly removal” on page 4-54. 2. Reseat the operator panel cable on both ends. 3. Check for any damage on the cable. Is the cable damaged?	Replace operator panel cable. See “Operator panel cable removal” on page 4-140.	Go to step 4.
4	<ul style="list-style-type: none"> For C746x: Replace the 2.3 inch operator panel assembly with card. See “Operator panel assembly removal (C746)” on page 4-34. For C748x: Replace the UICC card. See “Operator panel assembly removal (C748)” on page 4-37. Does the problem persist?	<ul style="list-style-type: none"> For C746x: Return the old 2.3 inch operator panel assembly with card, then go to step 6. For C748x: Return the old UICC card, then go to step 5. 	Problem resolved.
5	Replace the LCD panel. Does the problem persist?	Go to step 6.	Problem resolved.
6	Replace the Operator panel cable. Does the problem persist?	For dead display. Go to Dead printer service check. Replace the system board. See “System board removal” on page 4-163.	Problem resolved.

Print quality service check

Note: This symptom may require replacement of one or more CRUs (Customer Replaceable Units) designated as supplies or maintenance items, which are the responsibility of the customer. With the customer's permission, you may need to install a developer (toner) cartridge or photoconductor unit.

Service tip: Before troubleshooting any print quality problems, do the following:

1. Print a menu settings page, and then check the life status of all supplies. Any supplies that are low should be replaced.
Note: Be sure and keep the original menu page to restore the customer's custom settings if needed.
2. On the menu page, make sure the following is set to the default level:
 - Color Correction: Set to Auto.
 - Print Resolution: Set to 1200 dpi (print quality problems should be checked at different resolution settings).
 - Toner Darkness: Set to 4 (default).
 - Color Saver: Set to OFF.
 - RGB Brightness, RGB Contrast, RGB Saturation: Set to 0.
 - Color Balance: Select **Reset Defaults** to zero out all colors.
 - Check the paper type, texture and weight settings against what is loaded in the printer.

Once the printer has been restored to its default levels, do the following:

3. Inspect the transfer module for damage. Replace if damaged.
4. Inspect the photoconductor units and toner cartridges for damage. Replace if damaged.
5. If paper other than 20 lb plain letter/A4 paper is being used, load 20 lb plain letter/A4 and print the Print Quality pages to see if the problem remains.
6. Use Tray 1 to test print quality problems.
7. Print the Print Quality Pages, and then look for variations in the print from what is expected.

An incorrect printer driver for the installed software can cause problems. Incorrect characters could print, and the copy may not fit the page correctly.

Measure all voltages from the connector to the printer ground.

Print quality—background

Service tip: Some background problems can be caused by rough papers, non-Lexmark toner cartridges or if the media texture is set to the rough setting.

Some slick or coated papers may also cause background problems. Some problems occur with printers that run a large amount of graphics in a humid environment.

Step	Questions / actions	Yes	No
1	<p>Read the current status of the photoconductor unit from the customer menus.</p> <p>To view the status of the photoconductor units:</p> <ol style="list-style-type: none"> 1. Print quality—blurred or fuzzy print

Blurred or fuzzy print is usually caused by a problem in the EP drive assembly or in the transfer module. Check the EP drive assembly and transfer module for correct operation.

Blurred print can also be caused by incorrect feeding from one of the input paper sources, paper trays, or duplex paper path.

Check the high voltage spring contacts to ensure they are not bent, corroded, or damaged. Replace as necessary.

Print quality—half-color page

A photoconductor unit is not properly seated. Reset the specific photoconductor unit.

Print quality—horizontal banding

Step	Questions / actions	Yes	No
1	Measure the distance between repeating bands. Is the distance between bands either 27 or 36mm?	Replace the print cartridge.	Replace the photoconductor unit. See “Photoconductor unit removal” on page 4-150.

Print quality—horizontal line

The photoconductor unit is defective. Replace the photoconductor unit.

Print quality—insufficient fusing

Step	Questions / actions	Yes	No
1	Is the fuser properly installed?	Go to step 2.	Install the fuser properly.
2	Replace the fuser. See “Fuser removal” on page 4-118. Does this fix the problem?	Problem resolved.	Replace the LVPS. see “Low-voltage power supply (LVPS) removal” on page 4-127.

Print quality—missing image at edge

Reseat the developer cartridge.

Print quality—mottle (2–5mm speckles)

Keep running prints through, and the problem normally clears up. If the problem persists, replace the developer cartridge.

Print quality—narrow vertical line

Step	Questions / actions	Yes	No
1	Replace the photoconductor unit. See “Photoconductor unit removal” on page 4-150.	Problem resolved.	Replace the print cartridge.

Print quality—random marks

Service tip: The primary cause of random marks is due to loose material moving around inside the printer and attaching to the photoconductor unit, developer roll, or transfer module.

Step	Questions / actions	Yes	No
1	Is there any loose or foreign material on the photoconductor unit?	Replace the photoconductor unit. See “Photoconductor unit removal” on page 4-150.	Go to step 2.
2	Is there any loose or foreign material on the cartridge roll?	Replace the print cartridge.	Go to step 3.
3	Is there any loose or foreign material on the transfer module?	Replace the transfer module. See “Transfer module removal” on page 4-179.	Contact your next level of support.

Print quality—residual image

Service tip: Install a new print cartridge if available before doing this service check. Residual image can be caused by the photoconductor, cleaning blade, and other parts inside the print cartridge.

Step	Questions / actions	Yes	No
1	Is there any toner contamination on the fuser assembly?	Replace the fuser. See “Fuser removal” on page 4-118.	Contact your next level of support.

Print quality—solid color page

Service tip: A solid color page is generally caused by a problem in the high voltage system or an incorrect high voltage in the printing process resulting in toner development on the entire photoconductor drum.

Step	Questions / actions	Yes	No
1	Replace the photoconductor unit for the color in question. Does this fix the problem?	Problem resolved.	Go to step 2.

Accessing test and diagnostic procedure menus

There are different test menus that can be accessed during POR to identify problems with the printer.

Diagnostics menu	<ol style="list-style-type: none"> 1. Turn off the printer. 2. Press and hold buttons 3 and 6. 3. Turn on the printer. 4. Release the buttons when the clock graphic displays. 	<p>The Diagnostics menu group contains the settings and operations used while manufacturing and servicing the printer.</p> <p>See “Diagnostics menu” on page 3-2 for more information.</p>
Configuration menu	<ol style="list-style-type: none"> 1. Turn off the printer. 2. Press and hold buttons 2 and 6. 3. Turn on the printer. 4. Release the buttons when the progress bar displays. 	<p>The Configuration menu group contains a set of menus, settings, and operations which are infrequently required by a user. Generally, the options made available in this menu group are used to configure a printer for operation.</p> <p>See “Configuration menu (CONFIG MENU)” on page 3-27 for more information.</p>
Network SE Menu	<ol style="list-style-type: none"> 1. While in Network/Ports Menu (Menus—Network/Ports—Standard Network—STD NET SETUP), press and hold buttons 6, 7, and 9. 	<p>The Network SE menu contains advanced network menu tools. This key press only accesses the Network SE Menu when the panel displays the top-most settings inside the Standard Network menu.</p>
SE Menu	<p>From browser, add <code>/se</code> to device’s IP address (e.g. <code>http://158.183.3.2/se</code>)</p>	

To run the printer diagnostic tests described in this chapter, you must put the printer in Diagnostics mode.

Diagnostics menu

Note: Tray 2 refers to the 550-sheet tray located in the 550-sheet option assembly.

Diagnostics menu structure

When the Diagnostics mode is entered, each Diagnostics main menu item displays on the operator panel. When a diagnostic test is selected from the main menu, a sub menu displays and each individual test displays in the order shown. Any options that are referred to in the menus are displayed when the option is installed.

Available tests

The tests display on the operator panel in the order shown:

Registration

Note: If you need to perform alignment or registration, see **“Printhead alignment” on page 4-8**.

The following information is meant to explain the uses for the menu items.

Print registration makes sure the black printing is properly aligned on the page. This is one of the steps in aligning a new printhead. It is also the first step in aligning the duplex registration. See **“Quick Test (duplex)” on page 3-16**.

The settings available are Top Margin, Bottom Margin, Left Margin, Right Margin, Skew, and Quick Test.

Skew

One printhead houses the four color planes. The black plane is aligned to the printer, and the color planes are internally aligned to black. Adjust the skew mechanically by moving the printhead with a printhead adjustment screw. See **“Printhead mechanical alignment (C746)” on page 4-8** for instructions on setting printhead alignment. Electronic alignment fine tunes the alignment of the color planes to the black plane once the printhead is installed. Skew adjustment must be performed before color alignment is attempted. The following illustration shows proper alignment versus skewed alignment.

Print registration

Print registration (C746x)

To set print registration:

1. Select **REGISTRATION** from the Diagnostics Menu.
2. Select **Quick Test**.
The message *Quick Test Printing...* appears on the display.
Note: Retain this page to determine the changes you need to make to the margin settings.
3. Use ▼ or ▲ to select the margin setting you need to change, and press **OK**.
4. Use ◀ to decrease or ▶ to increase the offset values, and press **OK** to confirm the value.
5. The message *Submitting selection* displays and the original REGISTRATION screen appears.
The print registration range is:

Description	Value	Direction of change
Skew	-50 to +50 Each increment corresponds to 1/1200 of an inch.	Skew settings should be between -5 and +5. If not, readjust the skew with the printhead mechanical setting. See “Printhead alignment” on page 4-8.
Top margin	-25 to +25 Each increment corresponds to 8 scans at a 600 dpi scan rate (0.0133 inches or 0.339 mm).	A positive change moves the image down the page and increases the top margin. A negative change moves the image up and decreases the top margin. Note: Make sure media selection size matches the media size in tray 1.
Bottom margin	-25 to +25 Each increment causes approximately 0.55 mm shift in the bottom margin.	A positive offset moves text up the page and widens the bottom margin. A negative offset moves text down the page and narrows the bottom margin.
Left margin	-50 to +50 Each increment corresponds to 4 pels at 600 dpi (0.00666 in. or 0.1693 mm).	A positive change moves the image to the right. A negative change moves the image to the left.
Right margin	-50 to +50 Each increment corresponds to an approximate shift of 4 pels at 600 dpi.	A positive change moves the image to the left. A negative change moves the image to the right.

6. Continue changing the settings by repeating steps 2 through 4.
7. Print another copy of the Quick Test to verify your changes.

To exit without changing the value, press ↶.

Print registration (C748x)

To set print registration:

1. Select **REGISTRATION** from the Diagnostics Menu.
2. Select **Quick Test**.
The message *Quick Test Printing...* appears on the display.
Note: Retain this page to determine the changes you need to make to the margin settings.
3. Select the margin setting you need to change.
4. Touch **-** to decrease or **+** to increase the offset values,.
5. The message *Submitting changes* displays and the original REGISTRATION screen appears.

Quick Test

The Quick Test contains the following information:

- Print registration settings
- Alignment diamonds at the left, right, top and bottom
- Horizontal lines to check for skew
- General printer information, including current page count, installed memory, serial number, and code level.

Note: Print the Quick Test Page on letter or A4 paper.

1. Select **REGISTRATION** from the Diagnostics Menu.
2. Select **Quick Test**.

The message Quick Test Printing... appears on the display.

Once the Quick Test Page completes printing, the Registration screen displays again.

Alignment

Note: If you need to perform alignment or registration, see **“Printhead alignment” on page 4-8**.

The following information is meant to explain the uses for the menu items.

Alignment is part of the process of adjusting the printhead and the color planes to the black plane and to each other. Before you start, perform the black alignment (Registration). See **“Printhead alignment” on page 4-8**. If you are replacing a new printhead, see **“Printhead removal, installation, and adjustment” on page 4-153**.

Alignment (C746x)

To perform alignment:

1. Select **ALIGNMENT MENU** from the Diagnostics Menu. Scroll until you reach the color that you desire to align. Go to each submenu, press **OK** and use the right and left arrow keys to zero out all settings. Press **OK** after you zero out each setting.

Note: It is important to zero out all settings to make the adjustment easier.

2. Scroll to Quick Test in the same color menu. Press **OK**; two pages print.
3. On the pages, make sure all the Current Values are set to zero. If not, go back two steps and repeat.

Previous

Next

Go Back

4. Look at the coarse and fine adjustments on the top left of the page, and enter the best number for the top adjustment in the T space. Transfer this number over to the computation area for Z.
5. On the operator panel, use ▲ and ▼ to locate Top Margin. Press **OK**, and then use ◀ or ▶ to enter the setting computed for T. Press **OK** to save.
6. Repeat this process for skew (Z). Add the T value and the current Z value to obtain the new skew (Z) value.
7. Reprint the Quick Test page, and observe the results. Make additional adjustments if necessary before proceeding on to Quick Test step two page.
8. Obtain left (L), right (R), and Bow (P) value using the same method as obtaining T from Quick Test Step 1. Reprint the Quick Test to ensure the settings are correct. Make additional adjustments as required.
9. Press ↶ to return to ALIGNMENT MENU.

Next

Go Back

Alignment (C748x)

To perform alignment:

1. Touch **ALIGNMENT MENU** from the Diagnostics Menu. Scroll until you reach the color that you desire to align. Go to each submenu, and use **-** and **+** to zero out all settings.
Note: It is important to zero out all settings to make the adjustment easier.
2. Scroll and touch **Quick Test** in the same color menu. Two pages print.
3. On the pages, make sure all the Current Values are set to zero. If not, go back two steps and repeat.
4. Look at the coarse and fine adjustments on the top left of the page, and enter the best number for the top adjustment in the T space. Transfer this number over to the computation area for Z.
5. On the operator panel, touch **Top Margin**, and then use **-** or **+** to enter the setting computed for T. Touch **✓** to save.
6. Repeat this process for skew (Z). Add the T value and the current Z value to obtain the new skew (Z) value.
7. Reprint the Quick Test page, and observe the results. Make additional adjustments if necessary before proceeding on to Quick Test step two page.
8. Obtain left (L), right (R), and Bow (P) value using the same method as obtaining T from Quick Test Step 1. Reprint the Quick Test to ensure the settings are correct. Make additional adjustments as required.
9. Touch **Back** to return to ALIGNMENT MENU.

See **“Printhead mechanical alignment (C746)” on page 4-8** for printout samples and additional information.

Motor tests

The motor tests are run to locate noises in the printer and isolate failures between the motors, cables, and system board.

General motor tests procedures

In some instances, when you enter a particular test, you will be given the choice to run the motor in forward or reverse. Other times, there will only be the option to run the motor in forward direction.

In general, the test should work as follows:

1. Select **MOTOR TESTS** from the Diagnostics Menu.
2. Select the motor that you need to test.
3. Check the table below for setup requirements, if any.
4. Select the direction if a choice is offered (Forward or Reverse) or other setting for that test.

Press  or  to stop the motor and end the test.

The following tests have special setup before running the test:

Motor diagnostic setup

Motor	Setup requirements		Notes
	Top cover position	Front door position	
Tray 1	N/A	Closed	<ul style="list-style-type: none"> • Ok • Picks paper – use empty or remove tray

Print Tests

Input source tests

The purpose of the diagnostic Print Tests is to verify that the printer can print on media from each of the installed input options. The contents of the Print Test Page varies depending on the media installed in the selected input source.

Check each Test Page from each source to assist in print quality and paper feed problems.

To run the Print Test Page:

1. Select **PRINT TESTS** from the Diagnostics Menu.
2. Select the media source.
 - Tray 1
 - Tray 2 (if installed)
 - Tray 3 (if installed)
 - Tray 4 (if installed)
 - Tray 5 (if installed)
 - Multi-Purpose Feeder (if installed)
3. Select **Single** or **Continuous**.
 - If **Single** is selected, a single page is printed.
 - If **Continuous** is selected, printing continues until **X** is pressed to cancel the test.

If a source is selected that contains envelopes, an envelope test pattern is printed. If Continuous is selected, the test pattern is printed only on the first envelope.

Note: The Print Test Page always prints on one side of the paper, regardless of the duplex setting.

4. Press  or touch **Back** to return to PRINT TESTS.

Print quality test pages (Print Quality Pages)

The print quality test consists of five pages. Pages one and two contain a mixture of graphics and text. The remainder of the pages only contain graphics. The test prints on the media in the default tray.

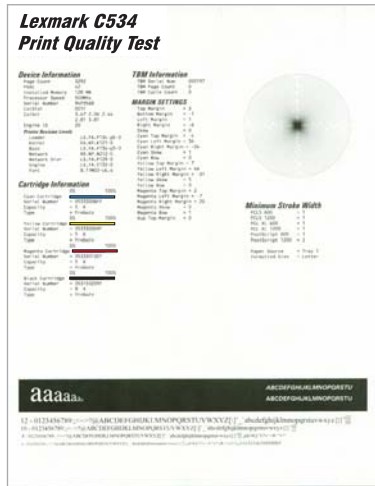

Previous

Next

Go Back

This test may be printed from either Configuration Menu or the Diagnostics mode. To run the print quality pages from the Diagnostics mode, select **PRINT TESTS** and **Print Quality Pages** from the menu. Once the test is started, it cannot be canceled. When the test pages print, the printer returns to the original screen.

To run the Print Quality Test Pages, select **Print Quality Pages** from PRINT TESTS. The message Printing Quality Test Pages is displayed, and the test prints.

Hardware Tests

Panel Test

This test verifies the operator panel LCD function.

To run the Panel Test:

1. Select **HARDWARE TESTS** from the Diagnostics Menu.
2. Select **Panel Test**.

Note: For C748x, the panel test continually executes. Each pixel is activated at the darkest level to the lightest level, and then the backlight illuminates and turns off. This is repeated continuously.

Note: For C746x, the operator panel display cycles through red, green, blue, white, and black.

3. Press  to cancel the test at any point.

Button Test

This test verifies the operator panel button function.

To run the Button Test:

1. Navigate to **Diagnostics Menu > HARDWARE TESTS > Button Test**.
2. C746x and C748x models have different button tests.
 - For C746x, follow the instruction on the operator panel display on which button to press.
 - For C748x, a keypad displays on the operator panel. Press each physical button one at a time and observe if its corresponding button on the display lights up.
3. Press  or touch **Back** to end the test.

DRAM Test

This test checks the validity of DRAM, both standard and optional. The test writes patterns of data to DRAM to verify that each bit in memory can be set and read correctly.

To run the DRAM Test, navigate to **Diagnostics Menu > HARDWARE TEST > DRAM Test**. The power indicator *blinks* indicating the test is in progress.

Note: If you need to exit the test before it is complete, turn off the printer.

DRAM Test	128M P:#####	F:#####
-----------	--------------	---------

P:##### represents the number of times the memory test has passed and finished successfully. Initially, 000000 displays with the maximum pass count being 99,999.

F:##### represents the number of times the memory test has failed and finished with errors. Initially, 000000 displays with the maximum fail count being 99,999.

Once the maximum pass count or fail count is reached, the test is stopped, the power indicator turns on solid, and the final results appear. If the test fails, SDRAM Error appears for approximately three seconds and the failure count increases by 1.

Serial 1 Wrap

The Serial 1 Wrap Test is used to check the operation of the serial port hardware using a wrap plug. Each serial signal is tested.

Previous

Next

Go Back

To perform the Serial 1 Wrap Test:

1. Disconnect the serial interface cable, and install the serial wrap plug.
2. Select **HARDWARE TESTS** from the Diagnostics Menu.
3. Select **Serial 1 Wrap**.

The power indicator *blinks* indicating the test is in progress. The following screens appear

```
Serial Wrap [x] Testing...
```

```
Resetting the
Printer
```

Upon completion of the POR, the following screen is displayed:

```
Serial Wrap
P:##### F:####
```

P:##### represents the number of times the serial port hardware has passed.

Initially, 000000 is displayed. The maximum pass count is 999,999.

F:##### represents the number of times the serial port hardware has failed.

Initially, 0000 is displayed. The maximum fail count is 999,999.

Any of the following explanations for failure may display:

- Receive Status Interrupt Error
- Status Error
- Receive Data Interrupt Error
- Transmit Data Interrupt Error
- Transmit Empty Error
- Threshold Error
- Receive Data Ready Error
- Break Interrupt Error
- Framing Error
- Parity Error
- Overrun Error
- Data Error
- Data 232 Error
- Data 422 Error
- FIFO Error
- DSR Error
- DSR PIO Error
- DSR Interrupt Error
- CTS Error
- CTS PIO Error
- CTS Interrupt Error

Go Back

USB HS Test Mode

1. Select **HARDWARE TESTS** from the Diagnostics Menu.
2. Select **USB HS Test Mode**.
3. Select the port (**Port 0, Port 1, Port 2, Port 3**).
4. Select the test for that port from the following list:
 - Test J**
 - Test K**
 - Test SE0 NAK**
 - Test Packet**
 - Test Force Enable**
5. While the test executes, **USB High Speed Testing... displays.**

To exit the test, restart the printer.

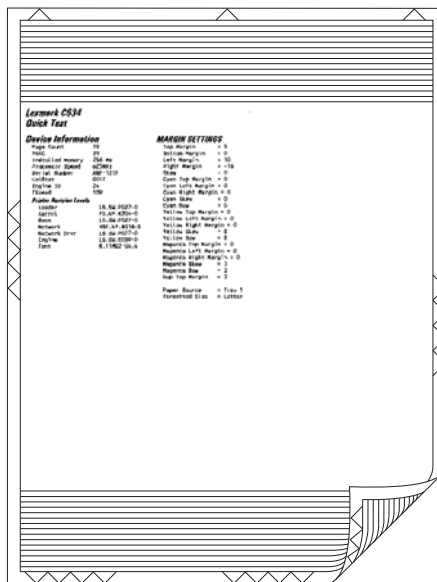

Duplex Tests

Quick Test (duplex)

Note: Before you set the duplex top margin, be sure to set the skew and alignment. See **“Printhead alignment” on page 4-8**.

This test prints a duplex version of the Quick Test that can be used to verify the correct placement of the top margin on the back side of a duplex page.

You can run one duplexed page (**Single**), or continue printing duplexed pages (**Continuous**) until  is pressed. For information about changing the margin, see **“Top Margin (duplex)” on page 3-18**.

The paper you choose to print the page on should be either Letter or A4.

To run the Quick Test (duplex):

1. Select **Quick Test** from DUPLEX TESTS.
2. Select **Single** or **Continuous**.
 - The single Duplex Quick test cannot be canceled.
 - The printer attempts to print the Quick Test Page from the default paper source.
 - Check the Quick Test Page for the correct offset between the placement of the first scan line on the front and back side of a duplexed sheet.

The single test stops automatically when a single duplex sheet is printed, and the continuous test continues until you press **X**.

Print Test (duplex)

This test provides service personnel with a way to verify the function of the printer's duplex hardware. After the user selects this test, the device automatically executes a continuous print test that generates a duplexed, color output page. To stop the test, the user must press **X**. While this test executes, the power indicator light blinks green and the panel displays "DUPLEX TESTS Printing...".

The paper you choose to print the page on should be either Letter or A4.

To run the Print Test (duplex):

1. Select **DUPLEX TEST** in the Diagnostics Menu.
2. Select **Print Test**.
The printer executes a continuous print test that generates a duplexed, color output page.
3. To stop the test, press **X**.

Previous

Next

Go Back

Skew (duplex)

This setting adjusts the duplex motor speed when it feeds through the aligning roll. It controls the skew between the first scan line and the top of the page. Adjustments are made to the image that is facedown in the output tray.

To set the Skew (duplex):

1. Select **DUPLEX TESTS** from the Diagnostics Menu.
2. Select **Quick Test**.
3. Select **Single**.
The test page prints.
4. Look at the dotted arrows at the top of the page. If the page is skewed on the page, select **Skew**.
5. For C746x, use ▲ or ▼ to select the skew setting you need to change, and press **OK**. For C748x, use – or + to select the skew setting you need to change, and touch .
 - Each increment shifts the skew by about 6 pixels at 600 dpi.
 - The Skew (duplex) range is -50 to +50, and the default value is 0.
 - An increase moves the image at the top right down the page. A decrease moves the image at the top right up the page.
6. Perform **Quick Test** again to verify the adjustment. Check the page to see if the image on the page is still skewed. If it is, repeat the adjustment.

Top Margin (duplex)

This setting controls the offset between the first scan line on the front of the duplex page and the first scan line on the back of the page. The duplex adjustments are made to the image that is face down in the output tray. Therefore, be sure to set the top margin in REGISTRATION before setting the duplex top margin. See **“Registration” on page 3-5**.

To set the Top Margin (duplex):

1. Select **DUPLEX TESTS** from the Diagnostics Menu.
2. Select **Quick Test**.
3. Select **Single**.
The test page prints.
4. Hold the page to the light to see whether the top margin of the back aligns with the top margin of the front.
5. If they do not match, select **Top Margin**.
6. For C746x use ◀ or ▶ to select the margin setting you need to change, and press **OK**. For C748x, use – or + to select the margin setting you need to change, and touch .
 - Each increment shifts the duplex top margin by 1/100 of an inch.
 - The Top Margin (duplex) range is -25 to +25, and the default value is 0.
 - An increase moves the top margin down and widens the top margin. A decrease moves the top margin upward and narrows the top margin.
7. Print the Quick Test again to verify the adjustment. Repeat until the front and back top scan lines match.

Left Margin (duplex)

By modifying this setting you can shift the image on the back side of a duplex page to the right or to the left.

To set the Left Margin (duplex):

1. Select **DUPLEX TESTS** in the Diagnostics Menu.
2. Select **Quick Test**.
3. Select **Single**.
The test page prints.
4. Hold the page to the light to see whether the left margin of the back aligns with the left margin of the front.
5. If they do not match, select **Left Margin**.

6. Use ◀ or ▶ to select the margin setting you need to change, and press **OK**. For C748x, use **-** or **+** to select the margin setting you need to change, and touch **✓**.
- Each increment shifts the duplex left margin by 4 pixels at 600 dpi (0.00666 inches or 0.1693 mm).
 - The Left Margin range is -50 to +50, and the default value is 0.
 - An increase moves the margin to the right, and a decrease moves the margin to the left.

Sensor Test

There are two groups of sensors tests, static sensors and dynamic sensors.

To run the Sensor Test:

1. Select **Sensor Tests** from the Diagnostics Menu.
2. Select **Static Sensors** or **Dynamic Sensors**.
 - For static sensors—view the current status. Exit menus and re-enter to change state.
 - For dynamic sensors—view the current status and toggle the state to test the sensor.
3. Select the particular sensor you need to test.

Touch **Back** or press **✖** to exit the test.

Sensor type	Sensor name	Possible values	Sensor activation
Static sensors	Waste Toner	Empty, Full, or Missing	N/A
	Belt Waste	Empty or percentage full	N/A
	Fuser Temp	Degrees (C)	N/A
	Fuser BUR Temp	Degrees (C)	N/A
	Power	Voltage	Open and close the front access door.

Previous

Next

Go Back

Sensor type	Sensor name	Possible values	Sensor activation
Dynamic sensors	Fuser Exit	Open/Closed	Open the top access cover. Activate the fuser exit flag. The sensor should change state.
	Input	Open/Closed	Remove the paper tray 1. Activate the input sensor flag. The sensor should change state.
	Door	Open/Closed	Open the front door. The sensor should change state.
	Narrow Media	Open/Closed	Test the MP feeder tray by inserting a sheet of paper, and pushing up to sensor. The sensor should change state.
	K Toner	Open/Closed	Remove the black toner cartridge. Shine a flashlight on the toner level sensor. The sensor should change state.
	M Toner	Open/Closed	Remove the magenta toner cartridge. Shine a flashlight on the toner level sensor. The sensor should change state.
	C Toner	Open/Closed	Remove the cyan toner cartridge. Shine a flashlight on the toner level sensor. The sensor should change state.
	Y Toner	Open/Closed	Remove the yellow toner cartridge. Shine a flashlight on the toner level sensor. The sensor should change state.
	TPS (toner patch sensor)	Open/Closed	Open the front access door. Slip a piece of paper between the TPS and the transfer module. The sensor should change state.
	Bubble	Open/Closed	Open the front door. Activate the fuser entry flag. The sensor should change state.
	Dynamic MPF	Open/Closed	Test by removing the MPF pick arm and activating the paper present sensor or remove the tray and shine a flashlight on the paper present sensor.
Other Sensors	Bin Full Test	Open/Closed	Move the bin full sensor flag (located on the fuser) up and down to toggle the sensor state.

Printhead Tests

Mirror Motor Test

1. Select **PRINTHEAD TESTS** from the Diagnostics Menu.
2. Select **Mirror Motor Test**.
The panel displays *Motor Running*.
After the test completes, the panel displays either *Pass* or *Fail*.

To stop the test, Touch **Back** or press .

Servo Laser Test

1. Select **PRINTHEAD TESTS** from the Diagnostics Menu.
2. Select **Servo Laser Test**.

The panel displays *Motor Running*. After the test completes, the panel displays either *Pass* or *Fail*.

To stop the test, Touch **Back** or press .

Device Tests

Note: These tests only appear if the flash or disk option is installed.

Quick Disk Test

This test performs a non-destructive read/write on one block per track on the disk. The test reads one block on each track, saves the data, and proceeds to write and read four test patterns to the bytes in the block. If the block is good, the saved data is written back to the disk.

To run the Quick Disk Test:

1. Select **DEVICE TESTS** from the Diagnostics Menu.
2. Select **Quick Disk Test**.
 - The power indicator *blinks* while the test is in progress.
 - Quick Disk Test/Test Passed is displayed if the test passes and the power indicator turns on solid.
 - Quick Disk Test/Test Failed is displayed if the test failed and the power indicator turns on solid.

You cannot stop the test while it is running, but when it is complete, press  to return to DEVICE TESTS.

Previous

Next

Go Back

Disk Test/Clean

Warning: This test destroys all data on the disk and should not be attempted on a good disk. This test may run approximately 1½ hours depending on the disk size.

To run the Disk Test/Clean Test:

1. Select **DEVICE TESTS** from the Diagnostics Menu.
2. Select **Disk Test/Clean**.
Files will be lost/Go or Stop? is displayed to warn the user.
3. To exit the test immediately and return to DEVICE TESTS, touch **Back** or press . To continue with the test, press  or touch .
Disk Test/Clean/BAD:000000 00% is displayed. The screen updates periodically, indicating the percentage of test completed and the number of bad blocks found.
4. The power indicator *blinks* during the test. Touch **Back** or press  to cancel the test.
 - Once the test is complete, the power indicator turns on solid and a message displays.
 - *xxxx Bad Blocks/yyyy Usable* is displayed if fewer than 2000 bad blocks are detected. *xxxx* indicates the number of bad blocks, and *yyyyy* indicates the number of usable blocks.
 - *xxxx Bad Blocks/Replace Disk* is displayed if more than 2000 bad blocks are detected. The disk cannot be recovered because too many bad blocks exist on the disk.
5. Touch **Back** or press  to return to DEVICE TESTS.

Flash Test

This test causes the file system to write and read data on the flash to test the flash.

Warning: This test destroys all data on the flash because the flash is reformatted at the end of the test.

To run the Flash Test:

1. Select **DEVICE TESTS** from the Diagnostics Menu.
2. Select **Flash Test**.
 - The power indicator *blinks* while the test is running.
 - Flash Test/Test Passed is displayed if the test passes and the power indicator turns on solid.
 - Flash Test/Test Failed is displayed if the test fails and the power indicator turns on solid.
3. Touch **Back** or press  to return to DEVICE TESTS.

Printer Setup

Defaults

U.S./Non-U.S. defaults changes whether the printer uses the U.S. factory defaults or the non-U.S. factory defaults. The settings affected include paper size, envelope size, PCL symbol set, code pages, and units of measure.

Warning: Changing this setting resets the printer to factory defaults, and data may be lost. It cannot be undone.

Previous

Next

Go Back

Page Counts

You can view, but not change any of the three counts displayed under PAGE COUNTS.

To view the Prt Color Pg Count, the Prt Mono Pg Count, or the Perm Page Count:

1. Select **PRINTER SETUP** from the Diagnostics Menu.
2. Select the page count you wish to view:
 - Prt Color Pg Count
 - Prt Mono Pg Count
 - Perm Page Count

Touch **Back** or press  to return to PRINTER SETUP.

Serial Number

The serial number can only be viewed and cannot be changed.

To view the serial number:

1. Select **PRINTER SETUP** from the Diagnostics Menu.
2. Select **Serial number**.

Touch **Back** or press  to return to PRINTER SETUP.

Engine Setting 1 through 4

Warning: Do not change these settings unless requested to do so by your next level of support.

Model Name

The model name can only be viewed and cannot be changed.

Configuration ID

The two configuration IDs are used to communicate information about certain areas of the printer that cannot be determined using hardware sensors. The configuration IDs are originally set at the factory when the printer is manufactured. However, the servicer may need to reset Configuration ID 1 or Configuration ID 2 whenever the system board is replaced. The IDs consist of eight digits. The first seven digits in each ID are hexadecimal numbers, while the last digit is a checksum of the preceding seven digits. Each ID can contain a combination of the digits 0 through 9, and A through F.

Note: When the printer detects a Configuration ID that is not defined or invalid, the following occurs:

- The default standard model Configuration ID is used instead.
- Configuration ID is the only function available in DIAGNOSTICS.
- Unless the menu is in DIAGNOSTICS, Check Config ID displays.

To set the configuration ID:

1. Select **Printer Setup** from the Diagnostic mode.
2. Select **Configuration ID** from the Printer Setup menu.
3. The value for Configuration ID 1 displays.
4. Enter the Configuration ID 1.
 - Use the keypads on the operator panel to enter the configuration ID.
 - Press  or touch **Clear** to delete the default configuration ID displayed.
 - After the last digit is changed, press  or touch  to validate the Configuration ID 1. If **Invalid ID** appears, the entry is discarded. If the process is successful, **Submitting Changes** appears on the display.

Previous

Next

Go Back

5. Repeat the steps for entering the Configuration ID 2, and press **OK**.

Note: The printer will NOT perform an automatic POR after the Configuration IDs are accepted.

Reset color calibration (Reset Color Cal)

The Reset Color Cal enables the alignment of the color planes using pre-programmed values. Automatic Color Adjust Calibration may be more effective.

1. Select **PRINTER SETUP** from the Diagnostics Menu.
2. Select **Reset Color Cal**.
Resetting displays on the screen.
3. The printer returns to the previous screen when calibration is complete.

Parallel 1 strobe adjustment (Par 1 Strobe Adj)

Note: This setting appears only if the printer has a parallel port available in the PCI slot 1.

This setting enables the servicer to adjust the amount of time the strobe is sampled in order to determine if valid data is available on the parallel port. The range of values is -4 to 6. Each time this value is incremented by 1, the strobe is sampled 50 ns (nanoseconds) longer. Each time this value is decreased by 1, the strobe is sampled 50 ns less often. When the value of this setting is 0, the factory default is used to determine the length of time the strobe is sampled. If the servicer, for example, decreased the value from 0 to 3, the strobe will be sampled for 150 ns longer than the factory setting.

Motor Calibration

This test is run to calibrate the leading edge of the paper to each transfer station.

1. Select **MOTOR TESTS** from the Diagnostics Menu.
2. Select **Motor Calibration**.
The printer generates eight pages as part of this test.

To stop the test, press **X**.

EP Setup

EP Defaults

This setting is used to restore each printer setting listed in EP SETUP to its factory default value. Sometimes this is used to help correct print quality problems.

To restore EP Defaults:

1. Select **EP SETUP** from the Diagnostics Menu.
2. Select **EP Defaults**.
3. Select **Restore** to reset the values to the factory settings, and select **Do Not Restore** to exit without changing the settings.

Fuser temperature (Fuser Temp)

This adjustment can be used to help solve some customer problems with paper curl on low grade papers and problems with letterheads on some types of media.

The fuser temperature can be adjusted to: Low, Normal, High. The default is Normal.

Previous

Next

Go Back

DC Charge Adjust, Dev Bias Adj, Transfer Adjust

Each of these three settings enables you to adjust the high voltage levels controlling the electrophotographic process. You will use these settings to compensate for unusual operating circumstances such as high humidity. The printer uses the value of these settings together with other settings to calculate printing speed and media selection.

Reports

Menu Settings Page

The Menu Settings Page is a list of DIAGNOSTICS settings with the current value.

Event Log

Display Log

The event log provides a history of printer errors. It contains the 12 most recent errors that have occurred on the printer. The most recent error displays in position 1, and the oldest error displays in position 12 (if 12 errors have occurred). If an error occurs after the log is full, the oldest error is discarded. Identical errors in consecutive positions in the log are entered, so there may be repetitions. All 2xx and 9xx error messages are stored in the event log.

To view the event log:

1. Select **EVENT LOG** from the Diagnostics Menu.
2. Select **Display Log**.

Touch **Back** or press ↶ to return to the EVENT LOG menu.

Previous

Next

Go Back

Print Log

Additional diagnostic information is available when you print the event log from DIAGNOSTICS rather than CONFIG MENU.

The Event Log printed from DIAGNOSTICS includes:

- Detailed printer information, including code versions
- Time and date stamps
- Page counts for most errors
- Additional debug information in some cases

The printed event log can be faxed to Lexmark or your next level of support for verification or diagnosis.

To print the event log:

1. Select **EVENT LOG** from the Diagnostics Menu.
2. Select **Print Log**.

Touch **Back** or press to return to EVENT LOG.

Clear Log

Use Clear Log to remove the current information in the Event Log. This affects both the viewed log and the printed log information.

1. Select **EVENT LOG** from the Diagnostics Menu.
2. Select **Clear Log**.
3. Select **YES** to clear the Event Log or **NO** to exit the Clear Log menu.
If **YES** is selected, Deleting EVENT LOG displays on the screen.

Touch **Back** or press to return to EVENT LOG.

EXIT DIAGNOSTICS

The printer performs a power-on reset and returns to normal mode.

Go Back

Exit Config	This selection exits Configuration Menu, and Resetting the Printer displays. The printer performs a POR and returns to normal mode.
-------------	---

Reset Fuser Cnt

Resets the fuser count value to zero. The Event Log records each time that a user executes the Reset Fuser Count operation. See **“Event Log” on page 3-29** for more information. This setting only appears if the Maintenance Warning and Intervention function is enabled in the printer Configuration ID.

To reset the fuser count:

1. Select **Reset Fuser Cnt** from the Configuration Menu.
To cancel a reset, touch **Back** or press ↶.
2. Select **Reset Fuser Cnt**. Once you select Reset Fuser Cnt, you cannot cancel.
Resetting Fuser Counter appears.

Color Lock Out

Select **On** when printing for extended periods with only black toner. This saves the color toner cartridges (cyan, magenta, and yellow) and photoconductor units from excessive wear. In addition to setting the values, the cyan, magenta, and, yellow toner cartridges and their matching photoconductor units must be removed from the printer. The default value is **Off**.

1. Select **Color Lock Out** from the Configuration Menu.
2. Select **On**.
3. Remove all color supplies. Remove the color cartridges and the color photoconductor units. Leave only the black supplies.
4. Select **Exit Config menu**, or power off and on again.

Note:

- If **On** is selected, and the color supplies are left installed when the printer is returned to normal mode, the printer displays *Remove All Color Supplies*. Remove all the color supplies, and press **OK** or touch .
- If **Off** is selected, then at step 3, install all color supplies. If the supplies are not installed when the printer returns to normal mode, the printer displays *31 Missing or Defective {color} Cartridge*. Replace the color cartridges and color photoconductors, and press **OK** or touch .

Print Quality Pages

To help isolate print quality problems, print the Print Quality Test Pages. The pages are formatted. The *Printing Quality Test Pages* message appears, then the pages print. The message remains on the operator panel until all the pages print.

Press **OK** or touch to print the pages. The Print Quality Test Pages contain several pages. The first page which is printed in English text only contains a mixture of text and graphics. The information includes values of the Quality Menu settings in Settings and printer and toner cartridge configuration information. The remaining pages contain only graphics. For samples of the pages, see **“Print quality test pages (Print Quality Pages)” on page 3-13**.

Reports

Reports

Menu Settings Page

The Menu Settings Page generates a list of Configuration Menu settings and the current values.

Event Log

This menu item lets the system support person print a limited set of the information contained in the Diagnostics mode version of the printed Event Log. For a sample of a Diagnostics Menu Event Log printout, see “**Event Log**” on page 3-25. The limited Configuration log and the full Diagnostics log printed versions show the same operator panel messages when they print and follow the same layout guidelines.

To print the Event Log:

1. Select **EVENT LOG** from the Configuration Menu
2. Select **Print Log** to begin printing the log.

Note: If an optional parallel card is supported and installed, then after the Event Log prints, a separate report prints that details the parallel card's history.

Color Trapping

Uses an algorithm to compensate for mechanical misregistration in the printer. When small black text or fine black lines are being printed, the printer checks to see if they are being printed on top of a colored background. If so, rather than remove the color from beneath the black content, the printer leaves the color around the edge of the text or line. The hole in the colored region is reduced in size which prevents the characteristic white gap that is caused by mis-registration.

This menu item applies to PCL 5e emulation, PCL XL, PDF, and PostScript.

Selections are **Off** and the values **1** through **5**, with **2** as the default. Values 1 through 5 indicate the amount of color remaining beneath the black content. Each setting increments by 1/600 of an inch. The less accurate the registration setting, the higher the setting needs to be adjusted. Selecting **Off** disables color trapping. The default value is 2.

Tray Insert Msg

This setting determines how many seconds the panel will display the Tray Insert message after inserting a tray into the printer.

Selections are **Disabled** and the values between **1** and **90**. The default value is **5**.

Panel Menus

Lets the system support person turn enable or disable the operator panel Administration Menu. Selecting **On** (the default) prevents users from changing values for the printer. **Off** allows users to changes the values. The default value is set to On.

This menu item only appears when the PJI PASSWORD Environment variable is set to 0.

Previous

Next

Go Back

PPDS Emulation

Activates or deactivates (default) the Personal Printer Data Stream (PPDS) emulation language. This menu item only appears if the PPDS interpreter is available.

Download Emuls

This menu item allows the system support person turn the download emulator off temporarily. This menu item only appears if at least one download emulator is installed.

The only selection is **Disable**. The printer automatically re-enables all download emulators after two instances of a power-on reset for the printer. To re-enable these emulators, a user would perform another power-on reset after exiting the Config Menu.

Demo Mode

This menu item allows marketing personnel or merchandisers demonstrate the printer to potential customers by printing the demo page.

Selections include Deactivate (default) and Activate. Select **Deactivate** to turn Demo Mode off; or select **Activate** to turn Demo Mode on.

Factory Defaults

This menu item resets the majority of printer values back to their factory default settings.

Warning: This selection cannot be reversed, so this operation should only be used as a last resort to fix any printer problem.

When factory default settings are restored:

- All downloaded resources (fonts, macros, symbol sets) in the printer memory (RAM) are deleted.
- All menu settings return to the factory default setting *except*:
 - The Display Language setting in the “Setup” Menu.
 - All settings in the Parallel Menu, Serial Menu, Network Menu, Infrared Menu, LocalTalk Menu, and USB Menu.

Selections are **Restore Base** and **Restore STD NET**. The Restore Network value only appears on printer models that have integrated network support.

Restoring Factory Defaults appears on the operator panel while factory defaults are restored.

Energy Conserve

This menu item affects the values that appear in the Power Saver menu on the operator panel. Energy Conserve only appears when the Power Saver feature is disabled.

Select **Off** in Energy Conserve to add a menu item to the Power Saver called *Disabled*. Energy Conserve does not disable Power Saver, it only allows the users to select **Disable**. When **On** (default) is selected in the Energy Conserve menu *Disabled* does **not** appear on as a choice in the Power Saver menu. Power Saver cannot be disabled from the user's operator menu.

Automatic Color Adjust

Sets the suggested number of pages which the printer should print between consecutive calibrations.

Selections are **Off** and the values between **100** and **1000** in increments of 50. The default is 500 pages.

If the printer exceeds the set value while printing a job, it completes the current job and any other jobs received while printing the current job before it initiates a calibration. The printer does not cancel or suspend an active job in order to perform a calibration. If a user is in any of the menus, including the Configuration Menu and the Diagnostics mode, an automatic color adjust calibration does not occur.

Previous

Next

Go Back

Auto Align Adj

Controls whether the printer executes the automatic alignment calibration after an initiating event occurs. When an event initiates a TPS operation, the printer performs a toner density calibration, (TPS) an alignment calibration, or both of the calibrations.

Toner Patch Sensing (TPS) is a diagnostic mechanism that automatically adjusts the printer toner density and alignment settings. When TPS executes, the printer generates toner patches on the transfer module. It then uses these to calculate the appropriate adjustment, to density, if necessary.

Selections are **On** (default) and **Off**. Turning this setting to **Off** is not recommended for normal operation because it prevents the printer from using the results of automatic color calibration and automatic alignment to make minor adjustments. Eventually, the user will have to manually correct alignment and color on the printer.

Color Adj State

These settings allow you to select when color calibrations occur. Selecting **Busy** indicates the color calibrations will complete queued jobs, but refuse to add new jobs to the queue. When calibration is complete jobs are again accepted. Selecting **Idle** allows calibrations only when the printer is idle.

Enforce Color Order

This setting gives the system support person the ability to enforce where the color cartridges may be placed, and if messages appear when cartridges are in the wrong location.

When **On** (default) is selected, the printer lets users place each toner cartridge in only its specified slot. For instance, the Magenta toner cartridge must be in the Magenta slot. If the user tries to place a cartridge in an incorrect slot, the printer message 31 Defective or Missing *<color>* Cartridge or 32 Unsupported *<color>* Cartridge appears where *<color>* stands for Cyan, Magenta, Yellow, or Black.

When **Off** is selected, the printer does not issue any message to let the user know that the cartridge is placed in the wrong slot inside the printer.

Color Alignment

Color alignment should be performed when the printhead may become misaligned because it was removed or replaced. Perform Color Alignment when a new transfer belt assembly is installed.

To perform color alignment:

1. Select **Color Alignment** from the Configuration Menu.
2. Select **Print Alignment Page**.
3. Select **Set A**.

Consulting the printed page, follow the instructions on the operator panel to choose the best appearing line numbered 0 through 20 for line A.

Continue selecting the best lines for the sets through **Set L**.

Motor Calibration

This test is run to calibrate the leading edge of the paper to each transfer station.

1. Select **Motor Calibration** from the Configuration Menu.
2. **Calibrating** displays, and the printer prints eight blank pages and then returns to the Configuration Menu.

Note: This test should be run at 600 dpi resolution and with duplex disabled.

Paper Prompts

Controls the source the printer selects for a change paper source message. The printer displays the change paper source message based on the size of the paper requested and not by the paper type.

Selections include Auto, Multi-Purpose Feeder, and Manual Paper.

Note: Multi-Purpose Feeder is only available on some printer models.

Note: If the Configure MP setting is changed to Manual, a power-on reset is performed, and the value of the Paper Prompts menu item before the power-on reset was Multi-Purpose Feeder, then when the printer restarts, the printer automatically changes the Paper Prompts setting to Manual Paper.

Load Manual overrides that would result in a change paper message are disabled for Paper or Envelope prompts that are set to Manual, Manual Paper, or Manual Envelope.

Envelope Prompts

Controls the source the printer selects for a change envelope source message. The printer displays the change envelope message based on the size of the envelope requested and not by the envelope type.

Selections include Auto, Multi-Purpose Feeder, and Manual Envelope.

Note: Multi-Purpose Feeder is only available on some printer models.

Note: If the Configure MP setting is changed to Manual, and a power-on reset is performed, and the value of the Envelope Prompts menu item before the power-on reset was Multi-Purpose Feeder, then when the printer restarts, the printer automatically changes the Envelope Prompt setting to Manual Envelope.

Load Manual overrides that would result in a change paper message are disabled for Paper or Envelope prompts that are set to Manual, Manual Paper, or Manual Envelope.

Action for Prompts

This setting gives the user the option of having the printer resolve change prompt situations without requiring any user assistance. If the **Prompt user** value is selected, the printer displays change prompts if the job does not match the media in the selected source. The user must select another source or change the paper. If **Continue** or **Use current** is selected, the printer acts as if the user made the selection **Continue** or **Use current** and continues without user intervention, in most cases.

Jobs on Disk

Lets the user select whether or not the printer deletes all buffered jobs on the hard disk. This menu item only appears if a hard disk is installed. It appears even if no buffered jobs exist on the hard disk.

Selections include **Do Not Delete** and **Delete**.

Note: **Delete** does not remove Print and Hold jobs. Use **Remove Held Jobs** in the Utilities Menu (user menu) to delete these jobs.

Disk Encryption

Controls whether the printer encrypts the information that it writes to the hard disk.

Warning: When the value for Disk Encryption, the printer completely formats the hard disk which means that all information on the disk is deleted.

Note: If an encrypted disk is removed from the printer and another disk is installed, the `Disk Corrupted. Reformat?` message appears. The newly installed disk must either be formatted or removed from the printer.

Selections include **Disable** (default) and **Enable**. When Disk Encryption is selected, Yes or No appears for you to confirm. Select either **Yes** or **No** to continue. To cancel, select **No**.

The Disk Encryption menu item only appears when:

- A non-defective disk is installed in the printer.
- The values of bits 3-2 of digit 4 in the Configuration ID 2 are either 01 for Supported, or 10 for Supported with an internal network adapter (INA).

A graphic appears, showing:

- The message `Encrypting Disk or Formatting Disk`
- A percentage scale
- The message `DO NOT POWER OFF`

The process is complete when the percentage scale displays 100.

Wipe Disk

Note: Due to the lengthy amount of time required to wipe an entire hard disk using either method, a wipe should not be initiated unless it is absolutely unavoidable (for example, disk corruption), or unless the printer can remain offline for several hours without inconveniencing users.

Warning: A user should not initiate either type of wipe from the Configuration Menu if the hard disk contains downloaded fonts, macros, held jobs, and so forth that should not be erased.

This setting initiates either a single pass wipe or a multiple pass wipe of the entire hard disk. Select **Disk Wipe (fast)** to complete a single pass wipe and replacement of the file system. Select **Disk Wipe (secure)** to complete a multiple pass wipe at a more basic level.

Wipe All Settings

The purpose of this setting is to make any sensitive information that may exist on the device's volatile or non-volatile storage completely indecipherable.

After selecting this setting, the operator panel displays the following message:

`This operation will clear all settings, solutions, and jobs on this device. The device will reboot during this process. Continue?`

To cancel the NAND wipe operation and return to the main Configuration Menu, select **No**. To execute the NAND wipe operation, select **Yes**.

After selecting **Yes**, the device initiates a non-critical NVRAM reset, and the operator panel displays the message `Resetting the device`, and then the device reboots.

The progress bar area of the Lexmark logo screen that appears during boot up displays the following message until the wiping process is finished:

`Wiping disk...Pass [x] of [y]. [Z]% done.`

Previous

Next

Go Back

Duplex Gloss

Generates higher quality duplex copies than when using the normal duplex mode. The major difference between normal duplex and duplex gloss mode is the number of sheets in the duplex print media path. Normal duplex mode feeds two sheets simultaneously, while duplex gloss feeds only one sheet.

Selections include **Off** (default) and **On**.

Font Sharpening

Lets a user set a text point-size value below the setting of the high frequency screens used when printing font data. This menu item only affects the PostScript, PCL, XL, and PDF emulators.

Settings are in the range of 0–150 (24 is the default). For example, if the value is set to 24, then all fonts sized 24 points or less use the high frequency screens.

Require Standby

When set to **Off**, the Standby Mode setting in the General Settings Menu displays a **Disabled** value.

UI Automation

This setting allows external developers to measure the stability of their applications by performing their own automated testing against the device.

Selections include **Enable** and **Disable** (default).

When **Enable** is selected, the machine creates a file called ENABLE_UI_AUTOMATION in the /var/fs/shared/ directory. As long as this file exists, the device permits automated testing by external users.

When **Disable** is selected, the machine removes the ENABLE_UI_AUTOMATION file from the /var/fs/shared/ directory and prohibits automated testing.

Key Repeat Initial Delay

This determines the initial length of delay before a repeating key starts repeating.

The selection values are from **0.25** to **5.00** with 0.25 second increments. The default value is **1.00**.

Key Repeat Rate

This determines the value for the number of presses per second for a repeating key.

The selection values are from **0.5** to **100.0** with 0.5 second increments. The default value is **15.0**.

Clear Custom Status

This operation erases any strings that have been defined by the user for the Default or Alternate custom messages.

USB Speed

Full or Auto (default).

Automatically Display Error Screens

Selections include **On** (default) and **Off** (default).

When **On** is selected, the operator panel automatically displays any existing printer-related IR after the device remains inactive on the Home screen for a length of time equal to the Screen Timeout setting. Any IR that appears on the operator panel will display the option to return to the Home screen without clearing it. Once the device returns to the Home screen, though, any existing IR again will appear after the device remains inactive on the Home screen for a length of time equal to the Screen Timeout setting.

Note: SFPs and MFPs use a different default value for this setting in order to preserve their legacy behavior with respect to IRs.

Exit Config

Exits the Configuration Menu. The printer performs a power-on reset and returns to normal mode.

Previous

Next

Go Back

Front cover locked in place

The front door locks during certain Busy events, and unlocks when those events are complete. This is a normal function. You can hear the door lock into place when one of these events take place. However, if the printer is turned off, or has an error while the front door is locked (for example, while printing or calibrating), the front door may not unlock. If this happens, turn the printer off, and restart it. Once it goes through POR, it may unlock itself. If this does not work, use the following procedure to unlock the front door:

1. Remove the two screws (A) from the rear upper cover, and remove the cover.

2. Remove the two screws (B) from the rear left cover.

Previous

Next

Go Back

3. Press the waste toner release latch (C), swing the front of the waste toner assembly away from the printer, and remove.

4. Remove the two screws (D) on the bottom and one screw higher up (E).
5. Press the locking tab (F).

Previous

Next

Go Back

- Lift the rear of the left cover out, and rotate it out of position.
Note: It will not come completely off with the front cover locked.

- With a flatblade screwdriver, turn the camshaft counterclockwise until the door unlocks.

- Open the front cover.

Previous

Next

Go Back

Printhead verification

You can verify that the printhead is the failing FRU by following this procedure:

1. Turn the printer off, and remove the power cord from the outlet. Remove all cords and cables from the printer before beginning.
2. Locate the printer on a corner of a work area so the front and back can be accessed.

Previous

Next

Go Back

3. Remove the rear frame cover.
 - a. **Loosen** the eight screws on the rear frame cover (A).
Note: Do not remove the screws.
 - b. Lift up on the rear frame cover to remove it from the back of the printer.

Previous

Next

Go Back

4. Carefully unplug the printhead ribbon (B) and the mirror motor cables (C) from the system board, and carefully connect the printhead ribbon and mirror motor cables from the new printhead into the system board. It is important to position the laser in the printhead down into the packaging as shown.
Note: Use the packaging that came with the printhead FRU to prop the printhead up.

C

B

5. Connect the power cord to the outlet and to the printer. Reconnect any cords.
6. Enter the Diagnostics menu (press and hold buttons **3** and **6**, turn on the printer, and release the buttons when the progress bar displays.)
7. Perform the Mirror Motor Test:
- Select **PRINTHEAD TESTS**.
 - Select **Mirror Motor Test**.
 The panel displays *Motor Running*.
 At the end of the test, the panel displays either *Pass* or *Fail*.
 - If the test fails, replace the system board.
 - If the test passes, perform the Servo Laser Test in step 8.
8. Perform the Servo Laser Test:
- Press  or  to go back to the **PRINTHEAD TESTS** menu.
 - Select **Servo Laser Test**.
 The panel displays *Servo Laser Test—Motor Running...*
 At the end of the test, the panel displays either *Pass* or *Fail*.
 - If the test fails, replace the system board.
 - If the test passes, install the printhead FRU.

Paper Jams

Error jam locations

The following illustration shows the location and error codes generated for specific paper jams and the corresponding locations of these jams.

Previous

Next

Go Back

Clearing jams

	<p>CAUTION—HOT SURFACE</p> <p>The fuser and the inside of the printer near the fuser may be hot. Wait for the fuser to cool before clearing jams from this area.</p>
---	---

By carefully selecting papers and specialty media (see **“Paper guidelines” on page 1-13**) and loading it properly, you should be able to avoid most jams. If jams do occur, follow the steps outlined below.

To resolve the jam messages, you must clear the entire paper path, and press  or touch  to clear the message and resume printing. The printer prints a new copy of the page that jammed if Jam Recovery is set to On or Auto; however, the Auto setting does not guarantee the page will print.

Note: Jam recovery is set to Auto by default. When jam recovery is set to Auto, the memory that holds the image of a page may be re-used after the page is printed but before it has successfully exited the printer if that memory is needed for another use. Therefore, a jammed page may or may not be reprinted, depending on the overall memory usage in the printer.

Avoiding jams

The following hints can help you avoid jams:

- Use only recommended paper or specialty media.
For more information, refer to the *Card Stock & Label Guide* available on the Lexmark Web site at www.lexmark.com/publications.
- Do not load too much paper. Make sure the stack height does not exceed the indicated maximum height.
- Do not load wrinkled, creased, damp, or curled paper.
- Flex, fan, and straighten paper before loading it.
- Do not use paper that has been cut or trimmed by hand.
- Do not mix paper sizes, weights, or types in the same stack.
- Store the paper in an appropriate environment.
- Do not remove trays while the printer is printing. Wait for Load tray <x> or Ready to appear before removing a tray.
- Do not load the multipurpose tray while the printer is printing. Load the tray prior to printing, or wait for Load Multipurpose tray with <x> to appear.
- Push all trays in firmly after loading paper.
- Make sure the guides in the trays are properly positioned and are not pressing too tightly against the paper.
- Make sure all paper sizes and paper types are set correctly in the printer control panel menu.
- Make sure all printer cables are attached correctly. For more information, refer to the setup documentation.

200 paper jams

If paper jams behind the inner door, but not under the photoconductor units, 200.xx Paper jam appears.

Note: To avoid overexposing the photoconductor units, do not leave the front door open longer than 10 minutes.

1. Open the front door.
2. Pull the jammed paper up and out to remove it from behind the toner cartridge area.

Note: Make sure all paper fragments are removed.

3. Close the front door.
4. Press **OK** or touch .

200 or 201 paper jam

If paper jams under the photoconductor units, 200.xx Paper jam or 201.xx Paper jam may appear.

1. Open the front door.
Note: To avoid overexposing the photoconductor units, do not leave the front door open longer than 10 minutes.

2. Pull the paper forward if it is lodged under the photoconductor units.
Note: You may need to remove the photoconductor units if the paper is lodged too tightly under them.

Previous

Next

Go Back

3. Remove each photoconductor unit, and place it on a flat surface.

4. Remove the jammed paper, and then replace each photoconductor unit.
5. Close the front door.
6. Press **OK** or touch .

201 paper jam

If paper is jammed under the fuser or the top cover, 201.xx Paper jam appears.

1. Open the front door, and then open the top cover.

Warning: Potential Damage: To avoid overexposing the photoconductor units, do not leave the front door open longer than 10 minutes.
2. Determine where the jam is located:
 - a. If paper is visible under the fuser, grasp it on each side and pull it forward.

- b. If paper is not visible, turn the screws on the fuser unit to the left.

Previous

Next

Go Back

- c. Lift the unit and pull to remove it.

- d. Remove the jammed paper.
e. Replace the fuser unit, and then turn the screws to the right to fasten it securely.

3. Close the top cover, and then close the front door.
4. Press **OK** or touch .

202 paper jam

If paper is jammed both under the fuser unit and in the slot behind the fuser unit, 202.xx Paper jam appears.

1. If the paper is visible in the standard exit bin, grasp the paper and pull it away from the bin.

2. Open the front door, and then open the top cover.
3. Grasp the paper on each side, and pull it forward.

Previous

Next

Go Back

If the paper is jammed behind the fuser, you will need to remove the fuser unit.

- a.** Turn the screws on the fuser unit to the left.

- b.** Lift the unit and pull to remove it.

- c.** Pull the paper gently out of the printer or up toward the standard exit bin to remove it.
d. Place the fuser unit back into the printer, and turn the screws to the right to fasten the fuser unit securely.

- 4.** Close the top cover, and then close the front door.
5. Press **OK** or touch .

Previous

Next

Go Back

203 paper jam

If paper is jammed under the rollers near the fuser, or in the standard exit bin 203.xx Paper jam appears.

1. Grasp the paper that is visible in the standard exit bin, and pull it away from the bin.

2. Open the front door, and then open the top cover.
3. Grasp the paper on each side, and pull it out gently.

4. Close the top cover, and then close the front door.
5. Press **OK** or touch .

230 paper jam

If paper is jammed between the front door and tray 1, 230.xx Paper jam appears.

1. Remove tray 1.
2. Open the front door.
3. Pull straight up to remove the jammed paper.

4. Close the front door.
5. Reinsert tray 1.
6. Press **OK** or touch .

Previous

Next

Go Back

240 paper jam

If paper is jammed in Tray 1, 241 .xx Paper jam appears. If paper is jammed in any of the optional trays, 24x .xx Paper jam appears.

- If the jammed paper is located in tray 1, follow these steps to remove the paper from tray 1.
 1. Open tray 1, and pull the jammed pages straight up and out.
 2. If the jam is located in front of the tray, pull the jammed pages up and out.

3. After removing the tray, the front door may need to be opened to access the jam.
 4. Close tray 1.
 5. Press **OK** or touch .
- If the jammed pages are located in one of the optional trays, follow the appropriate steps below to remove the pages from an optional tray.
 1. Open the specified optional tray, and pull the jammed pages out as illustrated.

2. After removing the tray, the tray above may need to be opened to access the jam.
3. Close the specified optional tray.
4. Press **OK** or touch .

Go Back

250 paper jam

If paper is jammed in the multipurpose tray, 250.xx Paper jam appears.

1. Press the paper release lever, and then remove the jammed pages from the multipurpose tray.

2. Load new paper into the multipurpose tray.
3. Press **OK** or touch **✓**.

Previous

Next

Go Back

Theory of operation

Paper path

Previous

Next

Go Back

Main Components

System board

The system board provides the intelligence of the printer. Command and control signals originate in the system card that make print media travel possible. The system card controls the timing of the print media during the printing so the media arrives at certain positions in the print process at certain times.

Paper tray

Houses the print media.

Paper pick mechanism

Picks the print media from the paper tray. The paper pick mechanism contains the paper pick (input) sensor and the multifunction transparency sensor.

Bump aligner roll

The bump aligner roll advances the print media onto the transfer belt and corrects any media skew as it comes out of the paper trays or MPF.

Transfer belt

The transfer rolls (located inside the transfer belt unit) are an integral part of the electrophotographic process, and the transfer belt advances the print media through the printer.

Fuser

The fuser bonds toner to the print media and advances the print media through the last portion of the paper path. The paper exit sensor is also located in the fuser, and a flag is present on all fusers that activates the bin full sensors on network model printers.

Duplex

The duplex function is built into the front access door and uses a two-pass method for rerouting the paper down and back through the paper path for a second time. To accomplish the two-pass method, the paper is fed partially out of the printer and is then reversed back into the printer.

Previous

Next

Go Back

Print media transport

The print media is picked from the input source and fed to the bump aligner roll. The media movement is detected by a sensor located in the paper pick mechanism. It does not matter where the media comes from (Tray 1, Tray 2, or, the MPF); it will enter the electrophotographic process at the bump aligner drive. The bump aligner motor drives the bump aligner roll which feeds the paper to the transfer belt.

Previous

Next

Go Back

Once the paper is fed onto the transfer belt, the photoconductor drums in conjunction with the transfer belt pull the print media through the paper path.

Previous

Next

Go Back

Once the print media exits the transfer belt, it enters the fuser where heat and pressure are applied to bond the toner permanently to the media. The fuser rollers continue to turn and pull the print media through the paper path until it reaches the exit drive roll. The exit drive roll pulls the print media from the fuser rollers and delivers it to the fuser output drive roll. Once the print media reaches the fuser output drive roll, the roller pushes the print media into the output bin.

Previous

Next

Go Back

If the page is to be duplexed, the fuser output drive roll continues to pull the media until it clears the paper exit flag and then reverses the rotation of the roller in order to pull the media back into the printer duplex assembly. The media is then routed down through the duplex path until it reaches the bump aligner roll. Once in this position, it enters the EP path for the second time.

The paper exit flag serves two purposes. When it triggers the paper exit sensor, it serves as a one-way gate for the media when it is exiting the printer to the output bin and also serves as a one-way gate when the media is entering back into the printer for a duplex print. In other words, it diverts the print media's path, directing it to either the output bin or the duplex paper path.

Previous

Next

Go Back

Mechanical drive

In order for the print media to move through the paper path, there are several drive motors that supply the mechanical power to the rollers discussed previously. The drives for these components are illustrated and discussed in the following paragraphs.

Paper pick mechanism drive

When printing from Tray 1 or Tray 2, the paper pick motor drives the paper pick gears which causes the pick roller to turn. During an MPF print, the paper pick motor drives the swing arm assembly for the MPF and causes the MPF paper pick roller to turn.

Paper tray and paper pick mechanism shown from rear with components removed for clarity

Next

Go Back

Bump aligner drive

The power to turn the bump aligner roll is supplied from the bump aligner motor. The motor drives a set of bump aligner gears which causes the bump aligner roll to turn.

Note: If this motor is stalling or causing waste toner box full messages, the vertical auger mechanism might be causing the problem.

Previous

Next

Go Back

Photoconductor unit/toner cartridge drive

The photoconductor units (four) and toner cartridges (four) receive drive power from the EP drive assembly motors. The top cartridge motor 1 on the EP drive assembly provides drive to the top two photoconductor units and toner cartridges (yellow and cyan). Likewise, the bottom cartridge motor 2 drives the two bottom photoconductor units and toner cartridges. When the printer's top access door is open, the couplers for the toner cartridges and photoconductor units disengage.

Previous

Next

Go Back

Transfer belt drive

The transfer belt unit receives drive from a motor located on the EP drive assembly. When the top access door is open, the coupler for the transfer belt disengages.

**Fuser drive**

The fuser drive (motor) is built into the fuser assembly and drives the fuser rollers to turn.

Previous

Next

Go Back

Duplex drive

The duplex drive is driven by the MPF/duplex motor through the MPF/duplex gear. Drive is provided to three drive shafts in the duplex unit by a belt that is driven by the MPF/duplex motor. The drive shafts move the print media through the duplex unit during printing.

Paper sensing

Sensors are strategically placed in the printer to ensure that the print media is making it to specific points within a given time in the electrophotographic process. There are two paper flags: one at the bottom of the machine (paper pick) to detect input paper, including duplex second side, from all sources and one at the top (paper exit) to detect paper movement beyond the fuser. The flags are similar in design, in that a mechanical arm is moved by the media to interrupt an optical sensor; both are normally blocked when no media is present. There is also a multifunction transparency sensor that detects if: 1) tray 1 is present, 2) narrow media is being used, and 3) the media is a transparency. The sensor works for tray 1, tray 2 (500-sheet option), and the MPF.

Paper pick sensor

Previous

Next

Go Back

Paper exit/duplex entry sensor and bin full flag

The paper exit/duplex sensor flag detects movement in two directions: as the paper exits the fuser and as it is retracted from the exit tray back into the duplex path. Each sheet must be driven past the fuser exit flag and allowed to fall before being turned around and starting the duplex path. If the print media activates the paper exit flag for too long, or the print media doesn't reach the paper exit flag within a given time, a paper jam error will be posted.

Next

Go Back

Electrophotographic (EP) process

Main components

System board

The system board is the brain of the printer. During the print process, an image is sent from a computer to the system board. The raster image processor (RIP) portion of the system card converts the data into a raster image and feeds this data along with control information to the printhead.

Previous

Next

Go Back

High voltage power supply (HVPS)

Provides a high voltage charge to:

- The charge roll located in the photoconductor unit
- The photoconductor drum located in the photoconductor unit
- The toner adder roller (TAR) located in the toner cartridge
- The developer roll located in the toner cartridge
- The doctor blade located in the toner cartridge
- The four transfer rolls located in the transfer belt

Printhead assembly

The printhead receives control and image data from the system card (RIP). Through the use of a laser unit, the printhead irradiates the photoconductor drum with light and creates an invisible image called a latent or electrostatic image.

Photoconductor unit

The photoconductor unit consists primarily of a charge roll and the photoconductor drum. The charge roll charges the surface of the photoconductor drum to prepare it for the latent image “drawn” by the laser. Once the photoconductor drum has been written to by the laser, it is responsible for picking up toner from the cartridge developer roller and then transferring the image to the print media.

Toner cartridge

This unit consists primarily of the developer roll and the toner adder roll. The primary function of this unit is to supply charge toner to the photoconductor unit for transfer onto the print media. The toner adheres to the electrostatic image on the surface of the photoconductor drum which is then transferred to the print media.

Fuser

The fuser assembly uses heat and pressure to fuse the toner image onto the print media.

Previous

Next

Go Back

Charging

The primary component of the charging process is the high voltage power supply. The following provides information that covers the mechanical transfer of the high voltage through a set of springs to each subcomponent of the charging process.

Photoconductor unit (charge roll)

The following illustration shows the circuit path that allows high voltage current to flow from the HVPS to the charge roll contact on the photoconductor unit. It is essential that the contact springs are properly touching to provide a good flow. If not, print quality problems will occur.

Photoconductor unit (photoconductor drum)

The following illustration shows the circuit path that allows high voltage current to flow from the HVPS to the photoconductor drum contact on the photoconductor unit. It is essential that the contact springs are properly touching to provide a good flow. If not, print quality problems will occur.

Previous

Next

Go Back

Toner cartridge

The following illustration shows the circuit path that allows high voltage current to flow from the HVPS to the toner cartridge. The toner cartridge contains three parts that are provided high voltage from the HVPS. These three parts are: the doctor blade, the developer roll, and the toner adder roll (TAR). It is essential that the contact springs are properly touching to provide a good flow. If not, print quality problems will occur.

Previous

Next

Go Back

Transfer belt

The transfer belt houses four transfer rollers that provide image transfer from the photoconductor drum to the print media. The transfer belt receives its high voltage charge through spring contacts located on the transfer contact assembly as shown in the following illustration. For the sake of simplicity, only one of the roller's high voltage paths is shown. This path is typical for the other three rollers as well.

Transfer belt high voltage path

Previous

Next

Go Back

Exposing

The main components in the exposure process are the system card, the printhead and the photoconductor unit. The following illustration depicts a typical data path for a single color exposure.

Data is received from a computer into a port on the system card. The system card's RIP function converts this data into raster information which is fed to the printhead along with other control data. The data is converted by the printhead laser into light energy data that is directed to the light sensitive photoconductor unit.

Previous

Next

Go Back

Developing

The two primary components of the developing process are the photoconductor unit and the toner cartridge. The toner cartridge contains a toner adder roll, developer roll and toner. Toner is advanced toward the toner adder roll by three paddle assemblies. The advanced toner clings to the electrically charged toner adder roll. The toner on the toner adder roll is then electrically attracted to the developer roll because of the difference in electrical charge between the toner adder roll and the developer roll. The toner uniformly coats the developer roll with help from the doctor blade and is introduced to the electrostatic image on the photoconductor drum. The toner then transfers to the photoconductor drum.

Previous

Next

Go Back

Transferring

After the toner is attracted to the photoconductor drum, the image is ready for transfer onto the print media. The print media is advanced in the paper path onto the transfer belt and is carried along the belt underneath each photoconductor unit. The charged transfer roll(s) located inside the transfer belt pulls the image from the photoconductor drum to the print media. This is a direct transfer method.

The main function of the transfer belt is to provide transport for the print media. Toner is not transferred directly to the belt during the print process.

Previous

Next

Go Back

Fusing

After the image has been transferred onto the print media, it is ready for fusing. The print media is transported into the fuser where the hot roll and backup roll use a combination of high heat and pressure to melt and press the toner to the media.

Previous

Next

Go Back

Cleaning

The transfer belt and photoconductor drum are cleaned at the end of the electrophotographic process cycle. The transfer belt surface is cleaned as it rotates past a cleaning blade and shaft located inside the transfer belt assembly. Any waste toner that is scraped off of the belt is collected in the waste toner container located next to the belt inside the transfer belt unit.

The photoconductor drum is cleaned by the cleaning blade.

Electrical interlock

5 V interlock switch

An interlock switch (A) triggered by the front access door disables the +5 V output to the printhead which turns off the laser.

24 V interlock switch

The 24 V interlock switch is located at the front-right side of the machine when you open the front door. Opening the front door disengages the 24 V interlock switch and cuts the 24 V supply to the system board, HVPS, motors, and fuser. Closing the front door triggers a switch that initializes the motor.

When the 24 V switch opens, the normally open side of the switch is activated which signals the system board to disable a +24 V power supply output, turning off all high voltage supplies, the bump/align motor, the duplex motor and the fuser motor for safety considerations.

Warning: Never poke or force cover the switch while fixing the machine. This can harm the person and machine.

Safety information

- The safety of this product is based on testing and approvals of the original design and specific components. The manufacturer is not responsible for safety in the event of use of unauthorized replacement parts.
- The maintenance information for this product has been prepared for use by a professional service person and is not intended to be used by others.
-  **CAUTION:** When you see this symbol, there is a danger from hazardous voltage in the area of the product where you are working. Unplug the product before you begin, or use caution if the product must receive power in order to perform the task.

Data Security Notice

This printer contains various types of memory that are capable of storing device and network settings, information from embedded solutions, and user data. The types of memory—along with the types of data stored by each—are described below.

- **Volatile memory**—This device utilizes standard Random Access Memory (RAM) to temporarily buffer user data during simple print and copy jobs.
- **Non-volatile memory**—This device may utilize two forms of non-volatile memory: EEPROM and NAND (flash memory). Both types are used to store the operating system, device settings, network information, scanner and bookmark settings, and embedded solutions.
- **Hard disk memory**—Some devices have a hard disk drive installed. The printer hard disk is designed for device-specific functionality and cannot be used for long term storage for data that is not print-related. The hard disk does not provide the capability for users to extract information, create folders, create disk or network file shares, or FTP information directly from a client device. The hard disk can retain buffered user data from complex scan, print, copy, and fax jobs, as well as form data, and font data.

To erase volatile memory, turn off the printer.

To erase non volatile memory see **“Configuration menu (CONFIG MENU)” on page 3-27** item pertaining to this.

To erase the printer hard disk see **“Configuration menu (CONFIG MENU)” on page 3-27** item pertaining to this.

The printer operator panel and RIP/controller board contain NVRAM. After removing the old part the part must be returned to your second level support.

Handling ESD-sensitive parts

Warning: Read the following before handling electronic parts.

Many electronic products use parts that are known to be sensitive to electrostatic discharge (ESD). To prevent damage to ESD-sensitive parts, follow the instructions below in addition to all the usual precautions, such as turning off power before removing electronic cards:

- Keep the ESD-sensitive part in its original shipping container (a special “ESD bag”) until you are ready to install the part in the printer.
- Make the fewest possible movements with your body to prevent an increase of static electricity from clothing fibers, carpets, and furniture.
- Put the ESD wrist strap on your wrist. Connect the wrist band to the system ground point. This discharges any static electricity in your body to the printer.
- Hold the ESD-sensitive part by its edge connector shroud (cover); do not touch its pins.
- If you need to put down the ESD-sensitive part for any reason, first put it into its special bag.
- Printer covers and metal tables are electrical grounds. They increase the risk of damage, because they make a discharge path from your body through the ESD-sensitive part. (Large metal objects can be discharge paths without being grounded.)
- Prevent ESD-sensitive parts from being accidentally touched by other personnel. Install printer covers when you are not working on the printer, and do not put unprotected ESD-sensitive parts on a table.
- If possible, keep all ESD-sensitive parts in a grounded metal cabinet (case).
- Be extra careful in working with ESD-sensitive parts when cold-weather heating is used, because low humidity increases static electricity.

Handling the photoconductor unit

The following precautions must be observed when handling the photoconductor unit. The photoconductor unit is a supply item you will have to remove during some of the repair procedures:

Transportation/storage

Use the specified carton whenever moving or storing the photoconductor unit.

Handling

- The optical photoconductor roller in the photoconductor unit exhibits the greatest light fatigue after being exposed to strong light over an extended period of time. Never expose it to direct sunlight. Cover the photoconductor unit when you remove it from the printer.
- Use care not to contaminate the surface of the optical photoconductor roller with an oil-based solvent, fingerprints, and other foreign matter.
- Do not scratch the surface of the optical photoconductor roller.

Parts not to be touched

Any part where the mounting screws are used to meet a printer alignment set at the factory must not be removed, disassembled, or adjusted.

Screw and retainer identification table

The following table contains screw types and retainers, locations, and quantities necessary to service the printer. Pay careful attention to each screw type location when doing removals. You must install the correct screw type in each location during reassembly.

Sizes are as close to actual as possible, as long as the printout is not scaled or resized.

Adjustments

Printhead alignment

Overview

When aligning the printhead, it is important to keep in mind that the printhead mounting screws should be initially loose enough to just hold the printhead in the printer. This allows the pages to be printed that will be used to align the black plane to the printer frame and also allows skew adjustment with the printhead alignment screw. Once the black skew is adjusted, the mounting screws are fully tightened.

There is one printhead that houses the four color planes. The black plane is aligned to the printer, and the color planes are internally aligned to black. Electrical alignment is done to fine tune the alignment of the color planes to the black plane once the printhead is installed and skew is adjusted.

The first step in aligning the printhead is to loosen the printhead mounting screws, and to set the skew for black.

Note: If you need to replace the printhead, see **“Printhead removal, installation, and adjustment” on page 4-153.**

Printhead mechanical alignment (C746)

Skew (black)

1. Turn off the printer.
2. Disconnect the power cord from the electrical outlet.
3. Remove the transfer module and photoconductor units:
 - a. Disconnect the transfer module cable (A).
 - b. Press the two tabs (B) to release the front access cover assembly.
 - c. Press the two tabs (C) on either side of the transfer module, and lift out the transfer module.

Note: Leave the photoconductor units on the transport belt when removing.

To avoid damaging the photoconductor drum, place the transfer module with the photoconductor units on a clean surface. Never expose the photoconductor units to light for a prolonged period of time. You can place a clean, dry cloth over the transfer module and photoconductor units until they are required.

4. Loosen the printhead mounting screws in the following order: D1, D2, and D3.

5. Remove the printhead alignment screw cover (E).

6. Reinstall the transfer module with the photoconductor units still attached.
7. Reconnect the transfer module cable.
8. Replace the toner cartridges.
9. Close the top access door.
10. Close the front access door.
11. Plug the electrical cord into the printer.
12. Plug the electrical cord into the outlet.

Next

Go Back

13. Align the printhead skew for black.

- a. Enter the Diagnostic menu (turn off the printer, press and hold buttons 3 and 6, turn on the printer, and release the buttons when the clock graphic displays).
- b. Select **REGISTRATION** from the DIAGNOSTICS menu, and select **Settings**.
- c. Select **Skew**, and press **OK**.
- d. Use **▼** or **▲** to set the Skew to zero, and press **OK**.
- e. Scroll down to **Quick Test**, and press **OK**. A page similar to this one prints:

Previous

Next

Go Back

- f. Adjust the printhead alignment screw (G) to change the skew and straighten the image on the printout.

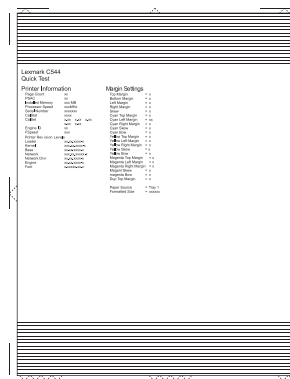

If the top right alignment marks are lower than the top left alignment marks, rotate the alignment screw counterclockwise a full revolution, and print the Quick Test page. Repeat adjusting the screw and printing the Quick Test until the top alignment marks are the same distance from the top of the media.

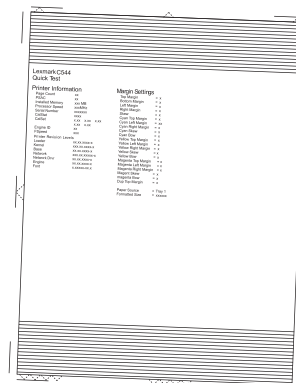

Note: One rotation of the printhead alignment screw equals approximately 0.5 millimeter movement of the top edge print alignment marks.

- g. When the top right and top left alignment marks are both showing and are even on the page, the skew is aligned.

Go Back

14. Tighten the printhead mounting screws.
 - a. Turn off the printer.
 - b. Disconnect the power cord from the electrical outlet.
 - c. Disconnect the transfer module cable.
 - d. Press the two tabs on either side of the transfer module, and lift out the transfer module with the photoconductor units in place.
 - e. Remove all of the toner cartridges.
 - f. Tighten the printhead mounting screws in the following order: H1, H2, and H3.

15. Replace the printhead alignment screw cover.
16. Replace the toner cartridges.
17. Reinstall the transfer module and the photoconductor units.
18. Connect the transfer module cable.

Registration (black)

Top Margin

1. Reconnect the power cord to the electrical outlet, but do not turn on the printer yet.
2. Enter Diagnostic mode (press and hold buttons **3** and **6**, turn on the printer, and release the buttons when the clock graphic displays).
3. Select **REGISTRATION**, and press **OK**.
4. Select **Quick Test**, and press **OK** or use the last Quick Test you used to adjust skew.

5. Select **Top Margin**, and press **OK**.
6. Adjust the values until both top alignment marks are on the top edge of the print.
 - Increasing the value (▶) moves the top alignment marks down on the page.
 - Decreasing the value (◀) moves the top alignment marks up on the page.
7. Press **OK** to save the value.
8. Print the Quick Test page, and check the top alignment marks. Repeat adjustment of the top margin and printing of the Quick Test page until top margin is set.

Bottom Margin

1. Select **Bottom Margin**, and press **OK**.
2. Adjust the bottom margin until the points of the bottom margin alignment marks are visible and touching the edge of the paper.
 - Increasing the value (▶) moves the bottom alignment marks up on the page.
 - Decreasing the value (◀) moves the bottom alignment marks down on the page.

3. Press **OK** to save the value.
4. Print the Quick Test page, and repeat this process until the bottom margin is adjusted.

Previous

Next

Go Back

Left Margin

1. Select **Left Margin**, and press **OK**.
2. Adjust the left margin until the points of the left alignment marks touch the edge of the page.
 - Increasing the value (▶) moves the left alignment marks away from the edge of the page.
 - Decreasing the value (◀) moves the left alignment marks toward the edge of the page.

3. Press **OK** to save the value.
4. Print the Quick Test page, and check the left alignment marks each time until you are satisfied.

Right Margin

1. Select **Right Margin**, and press **OK**.
2. Adjust the right margin until the points of the left alignment marks touch the edge of the page.
 - Increasing the value (▶) moves the right alignment marks away from the edge of the page.
 - Decreasing the value (◀) moves the right alignment marks toward the edge of the page.

3. Press **OK** to save the value.
4. Print the Quick Test page, and check the results. Repeat if necessary.
5. When the registration is complete, proceed to the color alignment.

Alignment (cyan, yellow, and magenta)

1. Press **⏪** until you reach the top menu.
2. Select **ALIGNMENT MENU**, and press **OK**.
3. Select **Cyan**, and press **OK**.
4. Select **Top Margin**, and press **OK**.
5. Use **◀** and **▶** to set **Top Margin** to zero, and press **OK** to save the value.
6. Do the same for **Left Margin**, **Right Margin**, **Bottom Margin**, **Skew**, and **Bow**.
It is important to set all the values to zero before starting.

Previous

Next

Go Back

7. Select **Quick Test** in the Cyan menu, and press **OK**.

Two pages print. You may have to print these pages several times until you get T (**Top Margin**) and Z (**Skew**) aligned. Do not go to step 2 until T and Z are aligned. The first page is similar to the following:

Previous

Next

Go Back

Cyan Alignment Step 1

Top (T) Coarse Adjustment

Skew (Z) Coarse Adjustment

Top (T) Fine Adjustment

Skew (Z) Fine Adjustment

T

Z

$$T = 0 + \frac{\text{New Cyan T value}}{\text{Current Cyan T value}} = \text{New Cyan T value}$$

$$Z = 0 - \frac{\text{Current Cyan Z value}}{\text{New Cyan Z value}} = \text{New Cyan Z value}$$

STEP 1: Adjust the Top (T) margin and Skew (Z) then confirm before going to Step 2.

Press the up or down buttons until a check appears at the setting in need of adjustment.

Press Select. Then use the < and > buttons to enter the new value. Press Select to save.

NOTE: If the alignment values cannot be determined by using the fine adjustment scales, then use the coarse adjustment scales at the top of the page.

STEP 2: Go to the next page to adjust the Left (L) margin, Right (R) margin, and Bow (P).

STEP 3: Reprint these pages to confirm final settings.

Go To Step 2

- Determine the line under Fine Adjustment that is closest. If the value is beyond the Fine Adjustment scale, use either of the Coarse Adjustment scales.

13. Continue to follow the directions on the bottom of the first page to find the Cyan Top Margin (T), the Skew (Z), and on the second page of the Quick Test page, the Left Margin (L), Right Margin (R), and Bow (P).

14. Repeat steps 1 through 13 for yellow and magenta.

Note: Start each color group by setting the Top Margin, Left Margin, Right Margin, Bottom Margin, Skew, and Bow to zero.

Printhead mechanical alignment (C748)

Skew (black)

1. Turn off the printer.
2. Disconnect the power cord from the electrical outlet.
3. Remove the transfer module and photoconductor units:
 - a. Disconnect the transfer module cable (A).
 - b. Press the two tabs (B) to release the front access cover assembly.
 - c. Press the two tabs (C) on either side of the transfer module, and lift out the transfer module.

Note: Leave the photoconductor units on the transport belt when removing.

To avoid damaging the photoconductor drum, place the transfer module with the photoconductor units on a clean surface. Never expose the photoconductor units to light for a prolonged period of time. You can place a clean, dry cloth over the transfer module and photoconductor units until they are required.

4. Loosen the printhead mounting screws in the following order: D1, D2, and D3.

Previous

Next

Go Back

5. Remove the printhead alignment screw cover (E).

6. Reinstall the transfer module with the photoconductor units still attached.
7. Reconnect the transfer module cable.
8. Replace the toner cartridges.
9. Close the top access door.
10. Close the front access door.
11. Plug the electrical cord into the printer.
12. Plug the electrical cord into the outlet.
13. Align the printhead skew for black.
 - a. Enter the Diagnostic menu (turn off the printer, press and hold buttons **3** and **6**, turn on the printer, and release the buttons when the clock graphic displays).
 - b. Touch **REGISTRATION** from the DIAGNOSTICS menu, and then touch **Settings**.
 - c. Touch **Skew**.
 - d. Set the Skew to zero.

Previous

Next

Go Back

e. Scroll down and touch **Quick Test**. A page similar to this one prints:

Previous

Next

Go Back

- f. Adjust the printhead alignment screw (G) to change the skew and straighten the image on the printout.

If the top right alignment marks are lower than the top left alignment marks, rotate the alignment screw counterclockwise a full revolution, and print the Quick Test page. Repeat adjusting the screw and printing the Quick Test until the top alignment marks are the same distance from the top of the media.

Note: One rotation of the printhead alignment screw equals approximately 0.5 millimeter movement of the top edge print alignment marks.

- g. When the top right and top left alignment marks are both showing and are even on the page, the skew is aligned.

Straight

Skewed

14. Tighten the printhead mounting screws.
 - a. Turn off the printer.
 - b. Disconnect the power cord from the electrical outlet.
 - c. Disconnect the transfer module cable.
 - d. Press the two tabs on either side of the transfer module, and lift out the transfer module with the photoconductor units in place.
 - e. Remove all of the toner cartridges.
 - f. Tighten the printhead mounting screws in the following order: H1, H2, and H3.

15. Replace the printhead alignment screw cover.
16. Replace the toner cartridges.
17. Reinstall the transfer module and the photoconductor units.
18. Connect the transfer module cable.

Go Back

Registration (black)

Top Margin

1. Reconnect the power cord to the electrical outlet, but do not turn on the printer yet.
2. Enter Diagnostic mode (press and hold buttons **3** and **6**, turn on the printer, and release the buttons when the clock graphic displays).
3. Touch **REGISTRATION**.
4. Touch **Quick Test** or use the last Quick Test you used to adjust skew.

5. Touch **Top Margin**.
6. Adjust the values until both top alignment marks are on the top edge of the print.
 - Increasing the value (+) moves the top alignment marks down on the page.
 - Decreasing the value (-) moves the top alignment marks up on the page.
7. Touch  to save the value.
8. Print the Quick Test page, and check the top alignment marks. Repeat adjustment of the top margin and printing of the Quick Test page until top margin is set.

Bottom Margin

1. Touch **Bottom Margin**.
2. Adjust the bottom margin until the points of the bottom margin alignment marks are visible and touching the edge of the paper.
 - Increasing the value (+) moves the bottom alignment marks up on the page.
 - Decreasing the value (-) moves the bottom alignment marks down on the page.

3. Touch  to save the value.
4. Print the Quick Test page, and repeat this process until the bottom margin is adjusted.

Previous

Next

Go Back

Left Margin

1. Touch **Left Margin**.
2. Adjust the left margin until the points of the left alignment marks touch the edge of the page.
 - Increasing the value (+) moves the left alignment marks away from the edge of the page.
 - Decreasing the value (-) moves the left alignment marks toward the edge of the page.

3. Touch  to save the value.
4. Print the Quick Test page, and check the left alignment marks each time until you are satisfied.

Right Margin

1. Touch **Right Margin**.
1. Adjust the right margin until the points of the right alignment marks touch the edge of the page.
 - Increasing the value (+) moves the right alignment marks away from the edge of the page.
 - Decreasing the value (-) moves the right alignment marks toward the edge of the page.

2. Touch  to save the value.
3. Print the Quick Test page, and check the results. Repeat if necessary.
4. When the registration is complete, proceed to the color alignment.

Alignment (cyan, yellow, and magenta)

1. Touch **Back** until you reach the top menu.
2. Touch **ALIGNMENT MENU**.
3. Touch **Cyan**.
4. Touch **Top Margin**.
5. Use + and - to set the **Top Margin** to zero, and then touch  to save the value.
6. Do the same for **Left Margin**, **Right Margin**, **Bottom Margin**, **Skew**, and **Bow**.
It is important to set all the values to zero before starting.

Previous

Next

Go Back

7. Touch **Quick Test** in the Cyan menu.

Two pages print. You may have to print these pages several times until you get **T (Top Margin)** and **Z (Skew)** aligned. Do not go to step 2 until T and Z are aligned. The first page is similar to the following:

Previous

Next

Go Back

Cyan Alignment Step 1

Top (T) Coarse Adjustment

Skew (Z) Coarse Adjustment

Top (T) Fine Adjustment

Skew (Z) Fine Adjustment

T → **Z**

$$T = 0 + \underline{\quad} = \underline{\quad}$$

↑ Current Cyan T value

↑ New Cyan T value

$$Z = 0 - \underline{\quad} + \underline{\quad} = \underline{\quad}$$

↑ Current Cyan Z value

↑ New Cyan Z value

STEP 1: Adjust the Top (T) margin and Skew (Z) then confirm before going to Step 2.

Press the up or down buttons until a check appears at the setting in need of adjustment.

Press Select. Then use the < and > buttons to enter the new value. Press Select to save.

NOTE: If the alignment values cannot be determined by using the fine adjustment scales, then use the coarse adjustment scales at the top of the page.

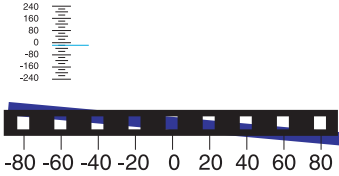

STEP 2: Go to the next page to adjust the Left (L) margin, Right (R) margin, and Bow (P).

STEP 3: Reprint these pages to confirm final settings.

Go To Step 2

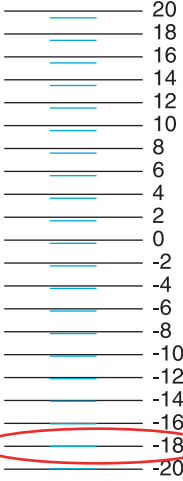

- Determine the line under Fine Adjustment that is closest. If the value is beyond the Fine Adjustment scale, use either of the Coarse Adjustment scales.

Top (T) Coarse Adjustment

If the alignment is not close enough to use the fine adjustment, get close to the ideal value by using the coarse adjustment marks. Select the block that is most filled by the color on the left, or approximate if none of the blocks are completely filled, and enter it for the new value. Reprint the quick test page, and then use the fine adjustment.

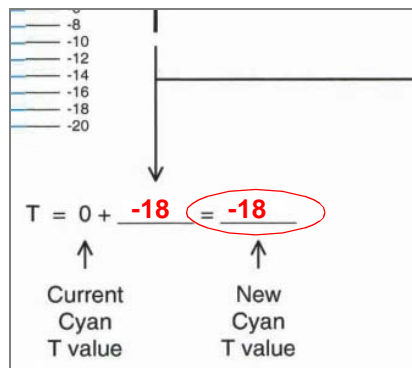

Top (T) Fine Adjustment

First, locate the line of the color that you are aligning that lines up best with the scale line. In this example, it is -18. If none of the colored lines match up, use the coarse adjustment to get close, reprint this page and then use the fine adjustment.

Previous
Next
Go Back

- Enter the number determined from the Fine Adjustment scale or the Coarse Adjustment scales on the part of the page for the “T” value. The current value is automatically entered on the sheet. At this point, it should be zero.

$T = 0 + (-18) = -18$

↑ Current Cyan T value ↑ New Cyan T value

- Enter the “New Cyan T value” on the operator panel and touch to save the value.
- Reprint the Quick Test, and evaluate whether you are at zero changes.

12. Repeat this process for skew (Z). Don't forget to subtract the T value and add the current cyan Z value to obtain the new skew (Z) value.

An example is shown below:

Previous

Next

Go Back

13. Continue to follow the directions on the bottom of the first page to find the Cyan Top Margin (T), the Skew (Z), and on the second page of the Quick Test page, the Left Margin (L), Right Margin (R), and Bow (P).

14. Repeat steps 1 through 13 for yellow and magenta.

Note: Start each color group by setting the Top Margin, Left Margin, Right Margin, Bottom Margin, Skew, and Bow to zero.

Printer removal procedures

Precautions to take before maintenance work

Do not implement any operation, removal, or modification and so on, which is not presented in this manual.

1. Turn the printer power off and unplug the power cable from the outlet prior to starting removals or checks.
2. Prior to starting any repairs, read and understand the warnings in this manual.
 - High temperature
 - High voltage
 - Laser radiation
3. Confirm the direction of all parts and screw lengths during removal/replacement.
4. Utilize the proper cleaning procedures/solvents during maintenance.
5. Confirm that all parts and covers are properly installed and assembled prior to starting the print test.

Cover removals

Front access cover assembly removal

See Front access door cover assembly for the part number for the models you need on [page 7-3](#).

1. Remove the paper tray.
2. Disconnect the transfer module cable (A).
3. Press the two tabs (B) to release the front access door cover assembly.
4. Press the two tabs (C) on either side of the transfer module, and lift out the transfer module.
Note: Leave the photoconductor units on the transport belt when removing.

Warning: To avoid damaging the photoconductor drum, hold the photoconductor units by their handle and place the photoconductor units on a clean surface. Never expose the photoconductor units to light for a prolonged period of time. See [“Handling the photoconductor unit” on page 4-2](#) for additional information.

5. Looking down at the keyed end of the restraint (D), twist the end clockwise, slide the restraint upward through the slit (E), and slip the end of the restraint through the keyed hole (F). Repeat for the other side.

Previous

Next

Go Back

6. Close the front access door assembly.
7. Remove the two screws (G) that attach the pivot pin to the front access door cover assembly.
8. Remove the bracket (H).

9. Remove the front access cover assembly.

Left cover removal

See **“Left cover” on page 7-3** for the part number.

1. Remove the paper tray.
2. Remove the waste toner assembly. See **“Waste toner assembly removal” on page 4-184**.
3. Open the front access door.
4. Open the top access door.
5. Remove the two screws (A) on the bottom and one screw higher up (B).
6. Press the locking tab (C).

Previous

Next

Go Back

7. Remove the screws (D) from the rear left cover.

8. Unsnap the right cover from the top cover, then lift and remove the left cover and rear left cover together.
Note: Because the paper tray dust cover is loose at this point, set it aside.

Note: If you are removing the left cover to access another part, leave the left cover and the rear left cover attached, and you are done. If you need to replace the left cover FRU, continue with the next step to remove the separate rear left cover FRU.

Previous

Next

Operator panel assembly removal (C746)

See operator panel assembly with card on [page 7-3](#) for the part number.

Warning: This part might contain customer confidential information. See **“Data Security Notice”** on [page 4-1](#) for more details. After removing this part, return it to your next level of support so any data can be removed. If the customer requests to keep the part, they must sign a confirmation of memory device retention form.

Warning: When replacing any one of the following components:

- Operator panel assembly
- System board
- Top access cover assembly

Only replace one component at a time. Replace the required component, and perform a POR before replacing a second component listed above. If this procedure is not followed, the printer will be rendered inoperable.

1. Remove the top access cover assembly. See **“Top access cover assembly removal”** on [page 4-54](#).
2. Turn the top access cover assembly over.
3. Remove the eight screws (A) securing the position guide cover.

Previous

Next

Contact springs kit removal

See [page 7-13](#) for the part number.

Toner cartridge contacts removal

1. Remove the LVPS. See [“Low-voltage power supply \(LVPS\) removal” on page 4-127.](#)
2. Remove the printhead. See [“Printhead removal, installation, and adjustment” on page 4-153.](#)
3. Remove contact spring cables from the cable restraints (A).

Note: Pay attention to the routing of the cartridge contact cables, and the appropriate slots where each cartridge contact is installed.

Previous

Next

Go Back

4. Remove the three screws (B) securing the top three bell crank links.

Previous

Next

Go Back

5. Remove the bell crank link (C) together with its bell crank spring (D).

Installation notes:

- a. When installing the bell crank link and spring back to the machine, guide the mounting hole on the bell crank link to the mounting pin on the cartridge guide (E), and guide one end of the spring onto the boss rest on the bell crank link and the other end onto the boss rest on the bell crank (F).
- b. Make sure the locator pin on the bell crank rests on the locator hole of the bell crank link (G).

6. Use a prying tool to remove the bell crank.
Note: The bell crank must be replaced due to the damage that can occur to the retention features of this bell crank.

7. Perform steps 5 and 6 to the other bell crank links and bell cranks, except for the one found at the lower-most portion of the cartridge guide.

Previous

Next

Go Back

8. Remove the lower-most bell crank spring (H) and bell crank (I).

H

I

9. Using a spring compression tool (J), align its opening to the rib on the cartridge guide as shown, then push and hold the spring compression tool into the cartridge contact spring.

Note: Make sure to properly align the opening on the spring compression tool to the rib on the cartridge guide.

J

Previous

Next

Go Back

10. Remove the cartridge contacts from the right side of the machine, then release the spring compression tool.
Note: Pay attention to the color coding of the cartridge contact cables, and the appropriate slots where each cartridge contact is installed.

Installation notes:

- a. Insert the cartridge contact spring into the slot on the cartridge guide.

Previous

Next

Go Back

- b.** Position the spring compression tool (K) as shown below and align its opening to the rib on the cartridge guide, then push and hold the spring compression tool into the cartridge contact spring.
Note: Make sure to properly align the opening on the spring compression tool to the rib on the cartridge guide.

K

- c.** Insert the cartridge contact on the right side of the machine.

- 11.** Perform steps 9 and 10 to remove all the cartridge contacts.

Photoconductor unit removal

Not a FRU

Warning: To avoid damaging the photoconductor drum, hold the photoconductor units by their handle and place the photoconductor units on a clean surface. See **“Handling the photoconductor unit”** on page 4-2 for additional information.

1. Open the front access door.
2. Lift the right end handle (A) of the photoconductor unit, releasing from the mount.
3. Lift the unit up and away from the left side of printer, ensuring the left end of the photoconductor is released from the holding pin (B).

Installation note: If a new photoconductor unit is installed, reset the life count value in the printer memory.

- If a message appears on the operator panel:
 1. When 84 *<color>* PC Unit Life Warning or 84 Replace *<color>* PC Unit appears, select **Supply Replaced**, and then press . Replace Supply displays.
 2. Select **Cyan PC Unit**, **Magenta PC Unit**, **Yellow PC Unit**, or **Black PC Unit** based on the photoconductor unit that was just replaced, and then press . *<color>* PC Unit Replaced displays.
 3. Select **Yes**, and then press  to clear the message.
- If no message appears:
 1. Press **Menu** ().
 2. Select **Supplies Menu**, and press .
 3. Press  to select **Replace Supply**.
 4. Select **Cyan PC Unit**, **Magenta PC Unit**, **Yellow PC Unit**, or **Black PC Unit** based on the photoconductor unit that was just replaced, and then press . *<color>* PC Unit Replaced displays. Press  to select **Yes**.

Pick arm roll removal and replacement

See **“Pick arm roll” on page 7-7** for the part number.

The auto compensator pick roll tires are located in the base printer. There are also tires in all input options. If you have additional input options, and you are having problems with media picking, replace these tires also. Always replace the pick arm rolls in pairs. The rolls come in a package of two.

Warning: Remove only the rubber tires and not the pick tire assembly to avoid losing small parts.

1. Remove the paper tray.
2. Pull the paper pick arm (A) down.

3. Remove the pick arm roll (B) from the pick arm roll assembly (C). Repeat for the other pick arm roll (D).

Previous

Next

Go Back

Installation notes: Install the new rubber tires with the surface texture turning in the direction as shown.

Note: Feel the rubber surface to verify it turns properly in the direction shown.

Printer pad removal

1. Slide the corner of the printer containing the damaged pad over the corner of the table.
2. Remove the side cover that corresponds to the damaged pad so you can see if the pad fully seats in the installation holes.
3. Pull the pad tabs (A) from the bottom of the printer.

Installation note: Verify that the pad fully seats in the installation holes.

Printhead removal, installation, and adjustment

See **“Printhead assembly” on page 7-11** for the part number.

Service tip—Testing the new printhead

See **“Printhead verification” on page 3-39** for quick way to verify that the existing printhead is failing before installing the new printhead. If the new printhead also fails, the existing printhead is probably working properly, so the system board is probably the failing component.

Printhead removal

1. Turn the printer off.
2. Disconnect the power cord from the electrical outlet and from the printer.
3. Remove the paper tray.
4. Open the front access door.
5. Open the top access door.
6. Remove the fuser.

7. Remove the transfer module and photoconductor units.
 - a. Disconnect the transfer module cable (A).
 - b. Press the two tabs (B) to release the front access cover assembly.
 - c. Press the two tabs (C) on either side of the transfer module, and lift out the transfer module.

Note: Leave the photoconductor units on the transport belt when removing.

Previous

Next

Go Back

Warning: To avoid damaging the photoconductor drum, place the transfer module with the photoconductor units on a clean surface. Never expose the photoconductor units to light for a prolonged period of time. Place a clean, dry cloth over the transfer module and photoconductor units until they are required.

8. Remove all of the toner cartridges.
9. Remove the right cover and the right side cover (attached). See **“Right cover removal”** on page 4-51.
10. Remove the LVPS. See **“Low-voltage power supply (LVPS) removal”** on page 4-127.
11. Remove the system board support shield. See **“System board support shield removal”** on page 4-168.
12. Push the top access cover down until it *clicks* into place.

Previous

Go Back

13. Remove the three printhead mounting screws (D).

Previous

Next

Go Back

14. Remove the printhead alignment screw cover (E).
15. While still holding the printhead in place, loosen the printhead alignment screw (F) until the printhead comes out.
Warning: Secure the printhead when loosening the printhead alignment screw. Failure to do this allows the printhead to fall out of the printer, potentially damaging the printhead.

E

F

Install the printhead and replace parts

Warning:

- When reinstalling the printhead, it is important to keep in mind that the printhead mounting screws should be **initially tightened just enough to hold the printhead in the printer**. The printer parts are installed with the printhead mounting screws loose so you can print the pages that will be used to align the black plane to the printer frame. This also allows the black skew adjustment to be adjusted with the printhead alignment screw.
- Once the black skew is aligned, the mounting screws will be fully tightened, and the next steps of alignment can be completed.

1. When installing the printhead, visually center the printhead and center the hole in the frame (A).

A

Previous

Next

Go Back

- Loosely attach the three printhead mounting screws (B).
Warning: Do not fully tighten the printhead mounting screws until skew has been adjusted.

B

- Lightly tighten the alignment screw (C).

C

- Feed the ground cable through the hole in bottom leftside frame.

Previous

Next

Go Back

5. Replace the system board support shield screws (E):
- Loosely attach the two mounting screws (E2)
 - Set the system board support shield in place.
Check that the ribbon mirror motor cable (white) and the printhead cable (bottom) do not rub against the edges of the frame.
 - Replace the remaining system board support shield screws in the following order:
 - Replace the four screws (E1) from the inner right side of the support shield.
 - Tighten the two mounting screws (E2) to the top of the support shield.
 - Replace the three screws (E3) from the bottom of the support shield, and two screws from the top.
 - Replace the five mounting screws (E4, E5) to the outer left side of the printer.
 - Reattach the printhead ground cable (E6) to the fourth screw from the top.

Previous

Next

Go Back

- 6.** Replace the system board.
- a.** Place the system board in position.
Check that the mirror motor cable and the printhead cable do not rub against the edges of the frame.
 - b.** Replace the nine screws (F) in the system board in the following order:
 - Loosely attach the four corners (F1) in a clockwise order, beginning with the left top corner.
 - Replace the USB connector screw (F2).
 - Loosely attach the left center side, top center, and right center side (F3).
 - Tighten the top left corner and top right corner.
 - Replace the two screws on the center bottom (F4).
 - Tighten the bottom left and bottom right corners (F1).

Previous

Next

Go Back

- c.** Route the cables through the access holes on the right side of the printer.

d. Replace all the screws (G) from the left side of the printer, including:

- Ethernet port connector (1 screws)
- Modem shield (1 screws)
- Hard disk shield (2 screws)
- Ground screw (1 screw)

Note: Be sure to attach the ground wire (H) to the ground screw.

e. Reconnect all the cables to the system board. Use the diagram below as a guideline.

Warning: Be careful in reconnecting the printhead ribbon cable (J). It can be damaged and should be handled carefully. A flat ribbon cable can easily be damaged and should be connected gently by hand.

f. Install the hard disk if appropriate.

7. Replace the LVPS.

- a.** Install the LVPS, and make sure the cable is in the cable guides, and not behind the LVPS.
- b.** Reconnect the cable to the LVPS.
- c.** Replace the five LVPS mounting screws.

Previous

Next

Go Back

- d. Reconnect the cable in connector JLVPS1 on the system board.
8. Replace the right cover.
 - a. Slide the right cover up until it locks into position.
Be sure the tab in the top access cover engages the slot in the right cover.
 - b. Replace the screw at the bottom of the rear frame cover.
 - c. Replace the two screws securing the right cover at the bottom.
 - d. Replace the metal screw at the bottom on the inside front cover
 - e. Replace the plastic screw at the top on the inside of the front cover.
9. Replace the left cover, the rear left cover, and the paper tray dust cover.
 - a. Place the paper tray dust cover into position.
 - b. Slide the cover down until it locks into place.
Be sure the post in the top access cover engages the hole in the left cover, and that the post in the paper tray dust cover engages the hole in the left cover properly.
 - c. Replace the taptite screw on the rear frame cover.
 - d. Replace the three screws on the left cover.
10. Replace the rear frame cover.
 - a. Replace the rear frame cover.
 - b. Tighten the eight screws.
11. Replace the rear upper cover (two screws).
12. Reinstall the transfer module with the photoconductor units still attached.
13. Reconnect the transfer module cable.
14. Replace the toner cartridges.
15. Reinstall the fuser.
16. Close the top access door.
17. Close the front access door.
18. Replace the paper tray.

Align the printhead

Note: The printhead mounting screws should be initially tightened **just enough to hold the printhead in the printer.**

There is one printhead that houses the four color planes. The black plane is aligned to the printer, and the color planes are internally aligned to black. Electrical alignment is done to fine tune the alignment of the color planes to the black plane after the printhead is installed, and black skew is adjusted using the alignment screw.

1. Plug the electrical cord into the printer.
2. Plug the electrical cord into the outlet.
3. Align the printhead skew for black. Go through steps 13 to 18 on [page 4-10](#) for printhead alignment skew for black on the C746 model, or go through steps 13 to 18 on [page 4-19](#) for printhead alignment skew for black on the C748 model
4. Perform top margin alignment for black. Go to [page 4-13](#) for top margin alignment for black on the C746 model, or go to [page 4-23](#) for top margin alignment for black on the C748 model.
5. Perform bottom margin alignment for black. Go to [page 4-13](#) for bottom margin alignment for black on the C746 model, or go to [page 4-23](#) for bottom margin alignment for black on the C748 model.
6. Perform left margin alignment for black. Go to [page 4-14](#) for left margin alignment for black on the C746 model, or go to [page 4-24](#) for left margin alignment for black on the C748 model.
7. Perform right margin alignment for black. Go to [page 4-14](#) for right margin alignment for black on the C746 model, or go to [page 4-24](#) for right margin alignment for black on the C748 model.
8. Perform alignment for cyan, yellow, and magenta. Go to [page 4-14](#) for cyan, yellow, and magenta alignment on the C746 model, or go to [page 4-24](#) for cyan, yellow, and magenta alignment on the C748 model.

System board removal

See the system board part number for the model you need on **page 7-11**.

CAUTION

This product contains a lithium battery. THERE IS A RISK OF EXPLOSION IF THE BATTERY IS REPLACED BY AN INCORRECT TYPE. Discard used batteries according to the battery manufacturer's instructions and local regulations.

Warning: This part might contain customer confidential information. See **“Data Security Notice” on page 4-1** for more details. After removing this part, return it to your next level of support so any data can be removed. If the customer requests to keep the part, they must sign a confirmation of memory device retention form.

Warning: When replacing any one of the following components:

- Operator panel assembly
- System board
- Top access cover assembly

Only replace one component at a time. Replace the required component, and perform a POR before replacing a second component listed above. If this procedure is not followed, the printer will be rendered inoperable.

Warning: Be careful not to damage the printhead cable when removing the system board.

1. Remove the left cover and the rear left cover. See **“Left cover removal” on page 4-31.**
2. Remove the rear frame cover. See **“Rear frame cover removal” on page 4-47.**
3. Remove the hard disk if one is installed. See **“Hard drive assembly removal” on page 4-122.**
4. Remove all the screws (A) from the left side of the printer so you can remove the system board, including:
 - USB port connector (1 screw)
 - Ethernet port connector (1 screws)
 - Modem shield (1 screws)
 - Hard disk shield (2 screws)
 - Ground screw (1 screw)

System board support shield removal

See **“System board support shield” on page 7-11** for the part number.

1. Remove the system board. See **“System board removal” on page 4-163**.
2. Remove the right cover. See **“Right cover removal” on page 4-51**.
3. Pull the cables through the access holes on the right side of the printer.
4. Remove the five mounting screws (A) from the outer left side of the printer.
Note: Make a note of the attachment of the printhead ground cable (B) to the fourth screw from the top for later installation.
5. Remove the four screws (C) from the inner right side of the support shield.

Previous

Next

Go Back

6. Remove the five mounting screws (D) from the top and bottom of the support shield.
Note: Only the ribbon and mirror motor cables come through the access holes in the system board support shield.

7. Lower and remove the support shield. Be careful not to damage the ribbon cable that routes through the bottom frame of the printer.

Installation notes:

1. Loosely attach the two mounting screws (A).
2. Set the system board support shield in place.
Note: Check that the ribbon mirror motor cable (white) and the printhead cable (bottom) do not rub against the edges of the frame.

Previous

Next

Go Back

3. Replace the remaining system board support shield screws in the following order:
- Replace the four screws (B) from the inner right side of the support shield.
 - Tighten the two mounting screws (A) to the top of the support shield.
 - Replace the three screws (C) from the bottom of the support shield, and two screws from the top.
 - Replace the five mounting screws (D) to the outer left side of the printer.
- Note:** Be sure to connect the printhead ground cable (E) to the fourth screw from the top.

Next

Go Back

Transfer module removal

See **“Transfer module”** on page 7-7 for the part number.

1. Disconnect the transfer module cable (A).
2. Press the two tabs (B) to release the front access cover assembly.
3. Press the two tabs (C) on either side of the transfer module, and lift out the transfer module.

Note: Leave the photoconductor units on the transport belt when removing.

Warning: To avoid damaging the photoconductor drum, place the transfer module with the photoconductor units on a clean surface. Never expose the photoconductor units to light for a prolonged period of time. Place a clean, dry cloth over the transfer module and photoconductor units until they are required.

Previous

Next

Go Back

Note: If you are removing the transfer module to access another part, leave the photoconductor units attached, and you are done. If you need to replace the transport belt, continue with the next step to remove the separate photoconductor units.

4. Remove the photoconductor units. Lift the right end handle (D) of the photoconductor unit, releasing from the mount.
5. Lift the unit up and away from the left side of printer, ensuring the left end of the photoconductor is released from the holding pin (E).

Installation note:

- Place the photoconductor units on the new transport belt, and reinstall.
- Perform the Color Alignment in the Configuration Menu:
 1. Enter Config Menu (turn off the printer, press and hold buttons **3** and **6**, turn the printer on, and release the buttons when the clock graphic displays).
 2. Select **Color Alignment** from the Configuration Menu.
 3. Select **Print Alignment Page**.
 4. Select **Set A**.
 5. Consulting the printed page, follow the instructions on the operator panel to choose the best appearing line numbered 0 through 20 for line A.
 6. Continue selecting the best lines for the sets through **Set L**.
 7. Select **Back** (⏪) to return to the Configuration main menu, and select **Exit Config Menu**.

Feed with bushing roller removal

1. Remove the high-capacity input tray (HCIT) top plate assembly. See **“Top plate assembly removal”** on **page 4-214**.
2. Remove the four screws (A) securing the pass thru sensor bracket to the top plate assembly.
Note: The bushing may come off when removing the pass thru sensor bracket.

3. Remove the screw (B) securing the 46T gear (C) to the top plate assembly.
4. Remove the 46T gear.
5. *Snap* loose the feed roller (D), and remove.

HCIT controller board assembly removal

1. Remove the HCIT right cover. See **“HCIT right cover removal”** on page 4-204.
2. Disconnect the seven connectors (A) from the HCIT controller board.

3. Remove the ground screw (B) from the HCIT controller board.
4. Remove the two screws (C) securing the HCIT controller board to the card mount option.

5. Remove the HCIT controller board.

HCIT drawer slide assembly removal

The left and right drawer slide assemblies are the same, and only one is in a package. The instructions below are for removing the left slide, but removing the right slide is similar.

1. Remove the HCIT media tray assembly. See **“HCIT media tray assembly removal” on page 4-201.**
2. Remove the three screws (A) securing the HCIT drawer slide to the side frame.

3. Remove the HCIT drawer slide.

HCIT elevator motor with sensor removal

1. Remove the HCIT right cover. See **“HCIT right cover removal” on page 4-204.**
2. Disconnect the connector (A) from the HCIT controller board.

Previous

Next

Go Back

3. Release the hooks (B) securing the pass thru sensor to the top plate assembly.
4. Remove the pass thru sensor from the top plate assembly.
5. Release the harness from the clamps (C).
6. Remove the eight screws (D) securing the elevator motor with sensor to the side frame.

7. Remove the elevator motor with sensor.

Previous

Next

Go Back

HCIT pick arm roll removal

1. Remove the high-capacity input tray (HCIT) media tray assembly. See **“HCIT media tray assembly removal” on page 4-201**.
2. Pull the auto compensator pick arm (A) down.

3. Remove the pick arm roll (B) from the pick roll assembly (C).
 4. Repeat for the other pick arm roll (D).
- Note:** Always replace the pick arm rolls as pairs.

Installation notes:

See **“Pick arm roll removal and replacement” on page 4-151** to make sure the pick arm roll is oriented correctly.

Previous

Next

Go Back

HCIT slide assembly with spring removal

1. Remove the HCIT controller board assembly. See **“HCIT controller board assembly removal”** on page 4-207.
2. Disconnect the two springs (A) from the frame.
Note: Leave the springs attached to the cam size sensing plate (B) and the actuator switch.
3. Slide the cam size sensing plate (B) through the access hole in the rear side frame.

4. Remove the media size actuator from the card mount option (C).
5. *Snap* loose the actuator switch (D), and remove.

Previous

Next

Go Back

6. Remove the four screws (E) securing the card mount option to the frame.

7. Remove the card mount option.

Installation note:

1. Place the card mount option into position, and secure it with the four screws.
2. Reinstall the media size actuator to the card mount option.
3. Reinstall the actuator switch with spring through the inside of the drawer.
4. Reinstall the cam size sensing plate with spring through the access hole in the rear side.
5. Reattach the two springs to the frame.

Photointerrupter sensor with cable assembly removal

1. Remove the high-capacity input tray (HCIT) right cover. See **“HCIT right cover removal”** on page 4-204.
2. Disconnect the photo interrupter sensor cable connector (A) from the HCIT controller board.

A

3. Turn the drawer rear side down, and use 4.0 mm wrench to remove the four Allen screws (B) securing the counterweight to the rear frame.

Warning: Do *not* remove the screws without turning the drawer rear side down first. The counterweight is very heavy; it might fall and cause damage.

B

Previous

Next

Go Back

- Remove the screw (C) securing the sensor to the rear frame, and then release the hooks (D).
Note: Remove the cable from the restraint, and observe the routing for reinstallation.

- Remove the photo interrupter sensor with cable assembly.

Top plate assembly removal

- Remove the high-capacity input tray (HCIT) right cover. See **“HCIT right cover removal” on page 4-204.**
- Disconnect the five connectors (A) from the HCIT controller board.

Previous

Next

Go Back

3. Release the hooks (B) securing the pass thru sensor from the top plate assembly.
4. Remove the fourteen screws (C) securing the top plate assembly to the frame.

5. Remove the top plate assembly.

6. Preventive maintenance

This chapter describes procedures for printer preventive maintenance. Follow these recommendations to help prevent problems and maintain optimum performance.

Previous

Next

Go Back

Safety inspection guide

The purpose of this inspection guide is to aid you in identifying unsafe conditions.

If any unsafe conditions exist, find out how serious the hazard could be and if you can continue before you correct the hazard.

Check the following items:

- Damaged, missing, or altered parts, especially in the area of the On/Off switch and the power supply
- Damaged, missing, or altered covers, especially in the area of the top cover and the power supply cover
- Possible safety exposure from any non-Lexmark attachments

Lubrication specifications

Lubricate only when parts are replaced or as needed, not on a scheduled basis. Use of lubricants other than those specified can cause premature failure. Some unauthorized lubricants may chemically attack polycarbonate parts. Use IBM no. 10 oil, P/N 1280443 (Approved equivalents: Mobil DTE27, Shell Tellus 100, Fuchs Renolin MR30), IBM no. 23 grease (Approved equivalent Shell Darina 1), and grease, P/N 99A0394 to lubricate appropriate areas. Use Nyogel type 774 to lubricate the Fuser Drive Assembly and Nyogel 744 to lubricate the ITU and Cartridge Drive assemblies.

Maintaining the printer

Periodically, certain tasks are required to maintain optimum print quality.

Cleaning the exterior of the printer

1. Make sure that the printer is turned off and unplugged from the outlet.

	<p>CAUTION</p> <p>SHOCK HAZARD: To avoid the risk of electric shock when cleaning the exterior of the printer, unplug the power cord from the outlet, and disconnect all cables to the printer before proceeding.</p>
--	---

2. Remove paper from the standard exit bin.
3. Dampen a clean, lint-free cloth with water.

Warning: Potential Damage: Do not use household cleaners or detergents, as they may damage the finish of the printer.
4. Wipe only the outside of the printer, making sure to include the standard exit bin.

Warning: Potential Damage: Using a damp cloth to clean the interior may cause damage to your printer.
5. Make sure the paper support and standard exit bin are dry before beginning a new print job.

Cleaning the printhead lenses

Clean the printhead lenses when you encounter print quality problems.

1. Open the front access door.
Warning: Potential Damage: To avoid overexposing the photoconductor units, do not leave the front door open for more than 10 minutes.
2. Remove all four toner cartridges. Do not remove the photoconductor units for this procedure.
3. Locate the four printhead lenses.

4. Clean the lenses using a can of compressed air.
Warning: Potential Damage: Do not touch the printhead lenses.
5. Reinstall the four toner cartridges.
6. Close the front door.

Moving the printer

CAUTION

POTENTIAL INJURY: The printer weight is greater than 54 lbs (24.5kg) and requires two or more trained personnel to lift it safely.

Follow these guidelines to avoid personal injury or printer damage:

- Always use at least two people to lift the printer.

- Always turn off the printer using the power switch before moving it.
- Disconnect all cords and cables from the printer before moving it.
- Remove the printer from the options before moving it.

7. Parts catalog

How to use this parts catalog

The following legend is used in the parts catalog:

Asm-index	Part number	Units/mach	Units/FRU	Description
-----------	-------------	------------	-----------	-------------

- **Asm-index:** Identifies the assembly and the item in the diagram. For example, 3-1 indicates Assembly 3 and item number 1 in the table.
- **Part number:** Identifies the unique number that identifies this FRU.
- **Units/mach:** Refers to the number of units actually used in the base machine or product.
- **Units/option:** Refers to the number of units in a particular option. It does not include the rest of the base machine.
- **Units/FRU:** Refers to the number of units packaged together and identified by the part number.
- **NS:** (Not shown) in the Asm-Index column indicates that the part is procurable but is not pictured in the illustration.
- Model information used in the parts catalog:

Abbreviation used	Machine type and model	Printer name	Description
310	5026-310	Lexmark C746n	Network-ready
330	5026-330	Lexmark C746dn	Network-ready with duplex
330	5026-330	Lexmark C746dtn	Network-ready with duplex and 550 sheet tray
510	5026-510	Lexmark C748e	Network-ready with etask touch screen
530	5026-530	Lexmark C748de	Network-ready with etask touch screen and duplex
530	5026-530	Lexmark C748dte	Network-ready with etask touch screen, duplex, and 550 sheet tray

- Wipe Disk **3-33**
- wireless network antenna **4-198**
- wireless network card **4-199**

Part number index

P/N	Description	Page
40X0269	Power cord—USA, Canada, Bolivia, Peru	7-11
40X0271	Power cord (8 ft.)—United Kingdom	7-11
40X0273	Power cord (8 ft.)—Chile, Uruguay	7-11
40X0275	Power cord (8 ft.)—Israel	7-11
40X0288	Power cord (8 ft.)—Argentina	7-11
40X0301	Power cord (8 ft.)—Australia, New Zealand	7-11
40X0303	Power cord (8 ft.)—China	7-11
40X1367	10 ft. parallel cable, ROHS	7-20
40X1368	2 meter USB cable, ROHS	7-20
40X1416	Toner level sensor	7-13
40X1446	Right bellcrank assembly, with spring	7-7
40X1447	Left bellcrank assembly, with spring	7-7
40X1592	Print server 4-port USB	7-20
40X1593	Print server 1-port USB	7-20
40X1594	Print server parallel	7-20
40X1772	Power cord (8 ft.)—Switzerland	7-11
40X1773	Power cord (8 ft.)—South Africa	7-11
40X1774	Power cord (8 ft.)—Denmark, Finland, Norway, Sweden	7-11
40X1791	Power cord (8 ft.)—Taiwan	7-11
40X1792	Power cord (8 ft.)—Korea	7-11
40X3141	Power cord (8 ft.)—Austria, Belgium, Catalan, Czechoslovakia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Netherlands, Norway, Paraguay, Poland, Portugal, Russia, Spain, Sweden, Turkey, United Kingdom	7-11
40X3609	Power cord (8 ft.)—Japan	7-11
40X4585	Tray latch with spring	7-19
40X4587	Slide assembly with springs	7-19
40X4593	HCIT drawer slide assembly	7-19
40X4596	Power cord (8 ft.)—Brazil	7-11
40X4819	Serial interface card adapter	7-20
40X4823	Parallel 1284-B interface card adapter	7-20
40X4826	MarkNet N8120 10/1000	7-20
40X4827	MarkNet N8130 10/100 fiber	7-20
40X5102	Left cover	7-3, 7-5
40X5103	Rear upper cover	7-3, 7-5
40X5104	Rear left cover	7-3, 7-5
40X5105	Rear right cover	7-3, 7-5
40X5106	Output bin extension cover	7-3, 7-5
40X5107	System board support shield	7-11
40X5108	Cartridge cooling fan	7-14
40X5109	Cooling fan	7-14
40X5111	Front door parts packet	7-7
40X5113	Duplex reference edge assembly	7-7
40X5119	Top access cover links (slider cam)	7-3, 7-5
40X5121	Bin full sensor with cable	7-5
40X5122	Color-On-Demand assembly	7-14
40X5123	Printhead assembly	7-11
40X5126	Motor driver card	7-9
40X5127	5 V interlock switch	7-9
40X5128	24 V interlock switch	7-9
40X5129	High-voltage power supply	7-13
40X5130	Top cover camshaft assembly	7-14
40X5132	MP feeder/duplex drive parts packet	7-7
40X5136	Parts packet, screw	7-20
40X5136	Printer pad (included in parts packet)	7-7

40X5137	Contact springs kit	7-13
40X5140	Option tray assembly, 550-sheet option (includes tray)	7-16
40X5141	550-sheet tray assembly	7-16
40X5142	Special media assembly, including tray	7-17
40X5143	Special media tray assembly	7-17
40X5144	HCIT tray assembly	7-19
40X5145	Rear frame cover	7-3, 7-5
40X5146	HCIT front tray cover	7-19
40X5147	HCIT right cover	7-19
40X5148	HCIT left cover	7-19
40X5149	HCIT rear cover	7-19
40X5152	Pick arm roll	7-7
40X5152	Pick arm roll, 250-sheet drawer	7-17
40X5153	Dust cover assembly	7-3, 7-5
40X5155	Elevator motor with sensor	7-19
40X5156	Feed with bushing	7-19
40X5157	Top plate assembly	7-19
40X5158	Photointerrupter sensor with cable assembly	7-19
40X5159	HCIT controller card assembly	7-19
40X5168	HCIT pick arm roll	7-19
40X5168	Pick arm roll, 550-sheet tray	7-16
40X5281	High-capacity input tray (HCIT) relocation kit	7-20
40X5287	Cooling fan filter	7-3, 7-5
40X5290	EP drive assembly	7-9
40X5301	256 MB SDRAM	7-20
40X5302	512 MB SDRAM	7-20
40X5303	1024 MB SDRAM	7-20
40X5307	Waste toner HV contact assembly	7-13
40X5315	Wireless ISP thumbscrew	7-20
40X5316	14-pin JST cable assembly for ISP interface cable	7-20
40X5317	Parts packet, ISP thumbscrew and standoff	7-20
40X5318	ISP thumbscrew	7-20
40X5704	256 MB flash card	7-20
40X5969	Korean font card	7-20
40X5970	Simplified Chinese font card	7-20
40X5971	Traditional Chinese font card	7-20
40X5972	Japanese font card	7-20
40X5988	Top access cover assembly, 4.3 inch	7-5
40X5989	UICC card	7-5
40X5991	Low-voltage power supply	7-9
40X5993	Top cover assembly	7-3, 7-5
40X5994	Right cover	7-3, 7-5
40X5995	Front Door assembly	7-7
40X5996	System board, 4.3 inch model	7-11
40X5998	MPF Paper Present Sensor	7-9
40X5999	Paper tray assembly, 550-sheet	7-7
40X6319	Cranklift spring and metal clip	7-7
40X6351	Motor driver cable	7-15
40X6401	Transfer module	7-7
40X6496	MPF pick arm assembly	7-7
40X6877	Operator panel bezel, 530	7-5
40X6879	Operator panel bezel, 310	7-3
40X7051	Lexmark PrintCryption card	7-20
40X7058	160 GB hard drive assembly	7-20
40X7062	Wireless US 802.11b/g/n ISP adapter	7-20
40X7063	Wireless EU 802.11b/g/n ISP adapter	7-20
40X7116	Operator panel assembly	7-5
40X7159	Auger shaft and gear parts pack	7-13
40X7335	Operator panel bezel, 330	7-3

40X7520	Top access cover assembly, 2.3 inch	7-3
40X7603	Operator panel assembly with card, 310	7-3
40X7660	2.3 inch operator panel buttons parts package	7-3
40X7661	Front access door cover assembly	7-3, 7-5
40X7703	Speaker	7-5
40X7953	System board, 2.3 inch model	7-11
40X7966	Top access cover parts package	7-3, 7-5
40X7973	Cables parts packet	7-15
40X8110	Fuser assembly, 115 V	7-7
40X8111	Fuser assembly, 230 V	7-7
40X8112	Fuser assembly, 100 V	7-7
40X8259	Operator panel bezel, 510	7-5
40X8308	Paper pick assembly	7-7
40X8309	MP feeder/duplex motor	7-9
40X8317	Operator panel bezel, C74x (blank logo)	7-3, 7-5
40X8321	C746x forms + barcode	7-20
40X8322	C748x forms + barcode	7-20
40X8324	C746x IPDS SCS TNe card	7-20
40X8325	C748x IPDS SCS TNe card	7-20
40X8327	C746x Prescribe card	7-20
40X8328	C748x Prescribe card	7-20
40X8332	C74x relocation kit	7-20
40X8359	Caster front wheel	7-20
40X8373	Toner cartridge contacts	7-13
40X8478	Caster base	7-20
40X8554	Cartridge guide wheel	7-7
7377200	Option drawer relocation kit	7-20
